v2013.03.01_test add TIA Portal v12 with some bug for all Unicode version from v2012.10.12
v2013.01.21 fix bug with PID v11.0 keys, add some info for D7-SYS v8.0
v2012.10.12 add Chinese language (possible Cyrillic chars in the European interfaces :) ASCII > Unicode
v2012.09.29 add some info for Easy Motion v11.0, SinuTrain 4.4
v2012.07.29 add some info for PID v11.0 *but with error :(

v2012.07.23 add some info for Simotion Scout v4.3
v2012.07.19 add some info for Telecontrol Server Basic v2.0 and fix comment bug
v2012.07.18 add some info for PDM v6.1.
v2012.03.08 add some info for PCS7 v8.0.
v2012.02.26 add some info for WinCC Flexible 2008 SP3, Simatic Net v8.1. Fixed bug of euristic engine.
v2012.01.26 add some info for Simatic Net v8.1
14/05/2011 add some info for TIA Portal V11
15/02/2011 This internal version for testing add some keys
11/10/2010 add some info for....
10/10/2010 add one info for "SIK/ SIMATIC S5 PMC IE V7.0" ("A9S5IE70")
09/09/2010 add some info for WinCC DowntimeMonitor, WinAC, fix bug for comp and Virtual Machine with 1 HardDisk partition

09/05/2010 add keys for WinCC Flexible 2008 SP2 options v1.3, Sinaut, fixed one ALM v5 bug
20/04/2010 add some keys Safety Matrix, PCS7 powerrate, PCS7 CFC AS RT SIFPZASRPX9999A
20/03/2010 add some keys, "option Recommended" and info about closed PLC.NET.RU and reopened

<http://plcforum.uz.ua>

26/08/2009 add keys for TIA Portal v10.5, Braumat, Maintenance Station 2009

04/04/2009 add keys for WinAC MP 2008, PCS7 v7.1

22/12/2008 add keys for WinAC 2008, Simatic Net 2008, RF-Manager 2008

20/08/2008 add keys for WinCC Flexible 2008

24/07/2008 Open FastCopy v3 key option

21/07/2008 add keys for WinCC v7.0

29/06/2008 add keys for PID Tools v5.2, D7-SYS v7.0, PowerControl, RF-Manager

14/03/2008 add keys for Simatic IT and multikey description

23/02/2008 add keys for CEMAT v7.0 , WinCC v6.2 and PCS7 v7.0

18/02/2008 add keys for Simocode 2007

15/02/2008 add keys for DocPro 5.4, WinAC MP 2007, Soft Starter 2007 and fix error for "New"

folder
07/12/2007 add keys for Sinema E 2006 and fix error for Motor Starter 2007 (**but add bug - not install keys from "New" folder**)

30/11/2007 add keys for Motor Starter 2007, Net 2007

27/11/2007 add keys for SmartLabel v3.0 HF1, WinAC/RTX 2005 SP3

07/11/2007 Add and change some Tags keys for WinCC v6.2 and PCS7 v7.0

As it in a stage of development some functions can be not completely accessible or be carried out with flaws

Direct record on a hard disk and Flash memory works. On Flash memory long keys - the list some minutes enter the name only

It is necessary to add direct record of keys on a diskette

It is necessary to correct for the list of keys

In the previous versions there were problems with some short licenses (WinAC, SmartLabel).

In the given version the part of problems is solved.

In far, far years Siemens has charged development of protection for the software products to StopCopy corporation. That has developed protection on the basis of the key files placed on special image to the formatted Yellow diskette - from here and the name.

Thus affirmed, that protection up to that is reliable, that " it will be reliable to preserve your investments ". Big human thanks experts StopCopy for the done operation in the field of creation of an atmosphere of availability of products of Siemens to broad masses of programmers. It has made program and hardware solutions very popular and demanded worldwide, that has allowed to compete adequately to other manufacturers of automation even in their territory. To take for an example of the USA with and them B&R and General Electric... And accordingly has really saved up the nested investments. In fact iron equally should be bought all from Siemens.

The given program is intended for installation of keys of licenses in case of, when:

There has occurred " a rainy day of the programmer " - the system has flied together with all authorizations, and to work it is necessary, even in remote areas;

When there was a new hot product, and the heads yet does not give money for it.

Simply you wish to study for the general development.

It is developed in connection with release of version ALM 3.0 - the Authorization Licenses Manager after whom, so-called, "fastcopy" long keys of authorization have ceased to work because of their ignoring by this Authorizator.

"Fastcopy" keys could be copied simply in the directory of licenses C: \AX NF ZZ. They used auxiliary "hole" in system of authorization ALM <v3.0 which have been covered with output Step7 v5.4 SP1.

Also additional coding the keys, therefore new keys have been applied are not visible in ALM v2.2.

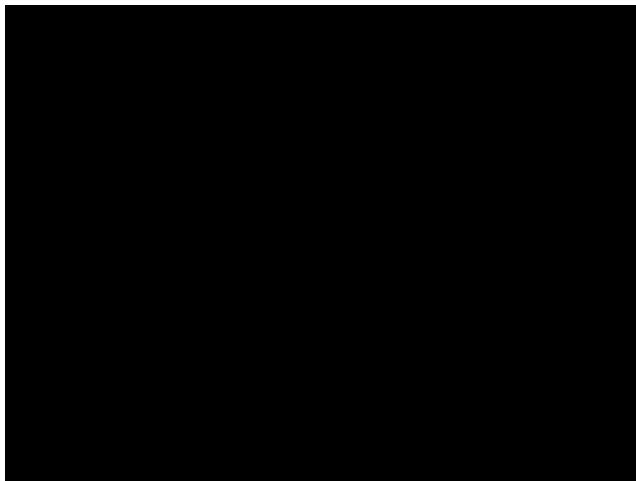

New keys are incorrectly displayed in old versions of programs EKB_Rename, EKB_Backup and in EKB_Install <v.2007.03.03

and are not visible in ALM v1 and v2.

I do not call to use a software of Siemens in the mercenary purposes. Programs for the industrial purposes basically should be pawned in estimates of projects and be gained on money of the customer. Very few people will come in a head to put the customer left PCS7 with the left keys and without the certificate on large production.

And for house usage probably there is nothing worse fuss with license diskettes. There were cases when the worn out firm Yellow license started to be showered for Intourist with miss of keys in far remote places without phone and the Internet.

I recommend to buy from Siemens **Premium Studio 2008** for 90 euros for acquaintance with Simatic programs

1.1 Introduction

The Main Window comprises the following buttons and fields:

Tree with the list of programs and the table with the list of keys

Field for a conclusion of comments and the help information

Line of a choice of language of the interface

Line of a choice of a disk for installation of keys and the button of updating of the list of disks

Lines of input of serial numbers

Line and the button for search of a key by the set word

The button of a call of a window for work with images of Yellow diskettes

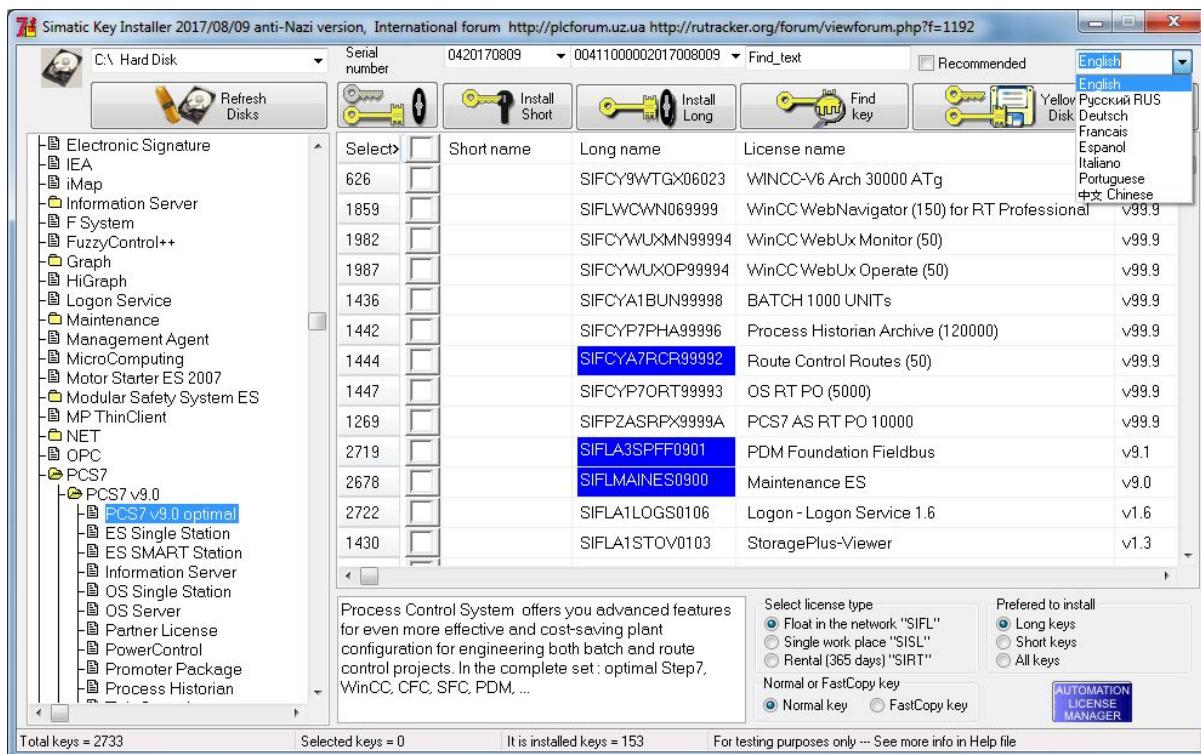

Field of a choice of preferences of type of the license at installation

Buttons of installation short, long or all chosen keys

Select key types for install

How can you deactivate the Trial License when the message appears indicating that the Trial License has expired, although the Floating License has been installed?

Install short key from old Siemens.exe

1.2 What is the difference between authorizations and license keys?

What is the difference between authorizations (AuthorsW short keys) and license keys (ALM long keys) ?

<http://support.automation.siemens.com/WW/view/en/19020864>

Configuration Notes:

License keys are the new authorizations as from STEP 7 V5.3. With the new license keys we are implementing a new concept in the licensing of SIMATIC software.

Whereas the authorizations up to and including STEP 7 V5.2 were valid only for a specific version of the software, the license keys as from STEP 7 V5.3 are automatically also valid for the earlier versions of the same software.

This validity however is restricted only to the programs that are licensed with the license keys.

For programs licensed with an authorization only the authorization valid for the version continues to be valid.

Another new feature is that license keys can be stored on a network driver and can then be used by various computers (floating license).

The options that the SIMATIC world makes available to you with this type of licensing are

described in Entry ID [19021092](#).

You can tell from the license number whether a program is protected by an authorization or by a license key. The license number is shown in the Automation License Manager (ALM).

An authorization license number has ten digits, a license key license number has twenty digits.

Whereas there were earlier only authorizations and emergency authorizations, there are now the following different types of license keys.

Notes on authorizations (AuthorsW short keys):

Authorizations can only be saved and repaired on the original yellow or red floppy disks and installation is only possible on internal hard disk drives and partitions or network drives, but not on USB sticks. To ensure working with the associated software the authorization must be available locally on the hard disk on which the software is installed. Authorizations cannot be transferred via the Internet nor installed on USB hard disks. There is an emergency authorization X*.EKB on Red or Yellow floppy disk

Notes on license keys (ALM long keys):

License keys cannot be restored on the floppy disks on which they were supplied, but can only be repaired on the PC/PG on which they are actually located. There is no longer an emergency authorization on floppy disk for license keys, because the software is always runnable if a valid license key has already been installed. So if there is a defective license key on the hard disk, working with the software is only interrupted at regular intervals with a message informing you that there is no valid license key available. As from ALM V1.1 SP1 you can also store license keys on USB sticks. A Trial License Key is installed from the CD. It can be activated via the actual SIMATIC application once for 14 days and is for evaluation purposes. You cannot restore or move the Trial License Key.

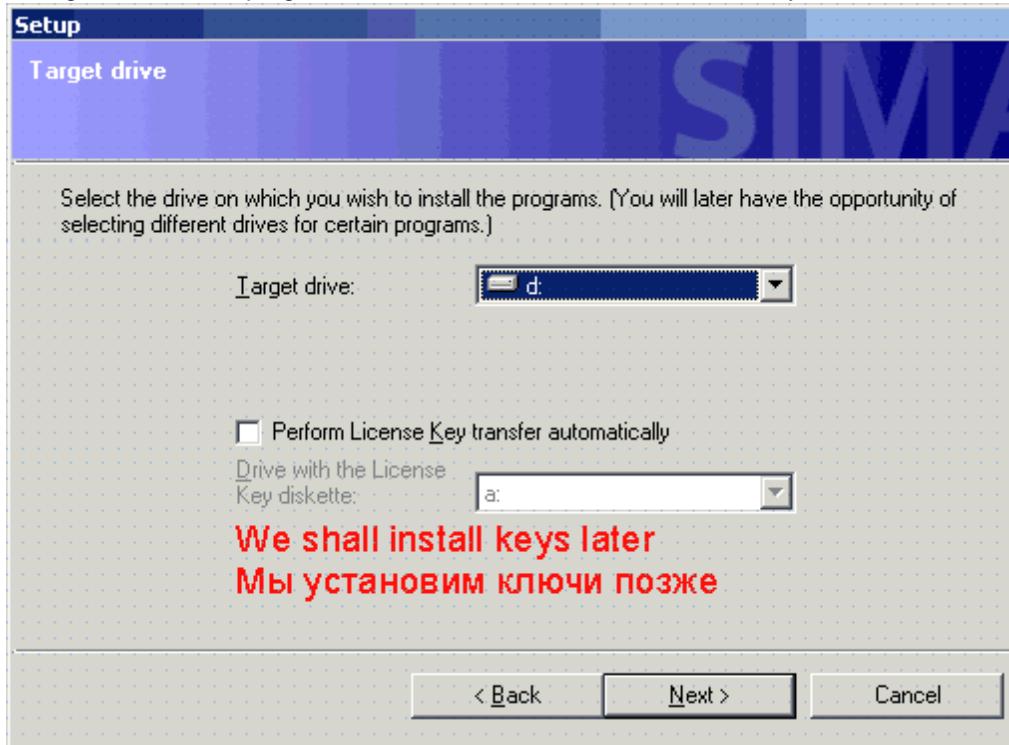

Software products that are released for utilization with license keys can also use newer license keys. More information on this is also available in the Online Help of the Automation License Manager under

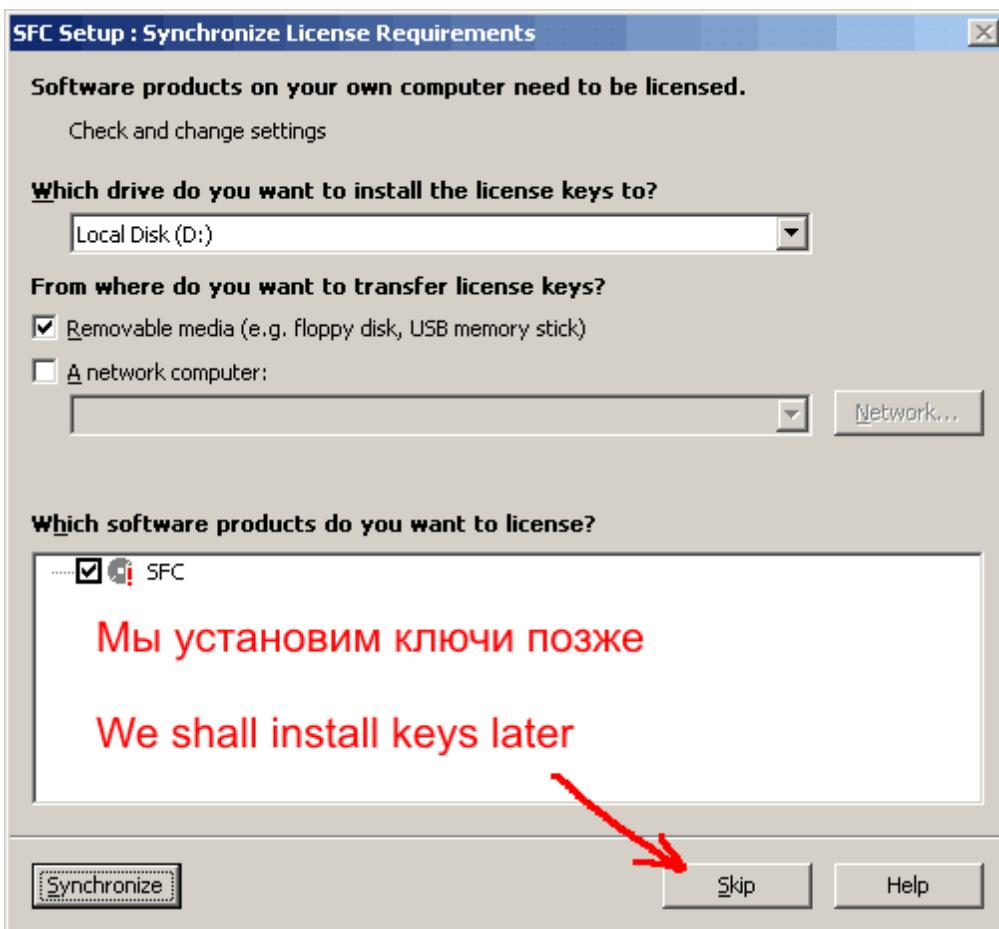

- Notes on utilizing "older" software versions.

See also: Type of key

1.3 We shall install keys later

During installation of programs Simatic it is refused installation of keys.

1.4 Language

Select one of the available languages in the drop-down list box.

1.5 Required keys

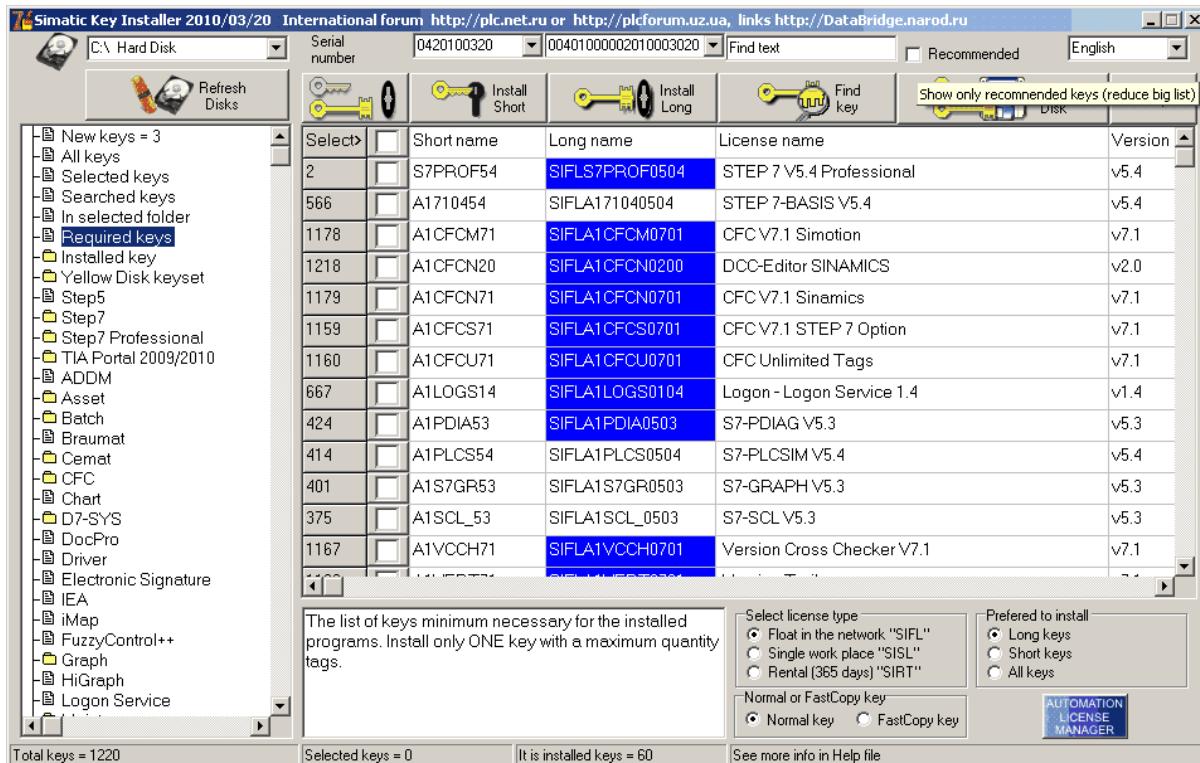

The list of necessary keys for the installed programs.

But this list is not full !

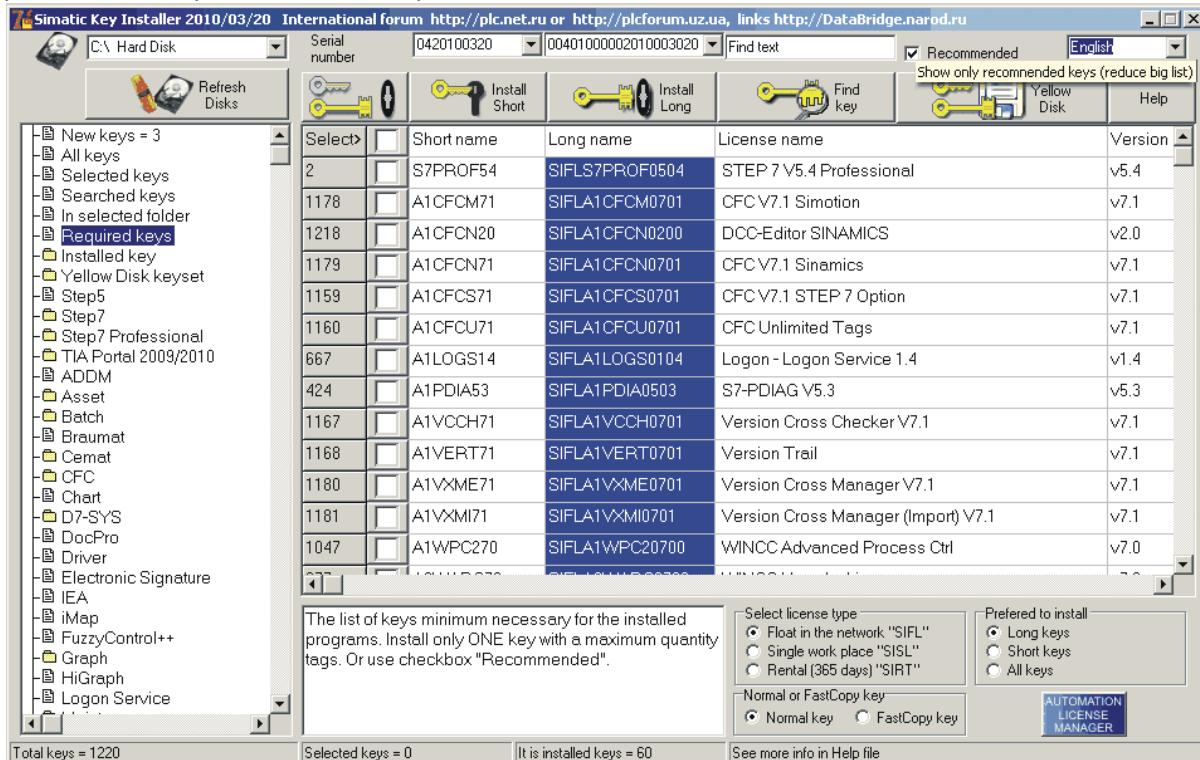

"I don't know all your fantasies..."

Some programs also required others keys !

From tag keys install only one with necessary quantity of tags (an example for CFC in figure).

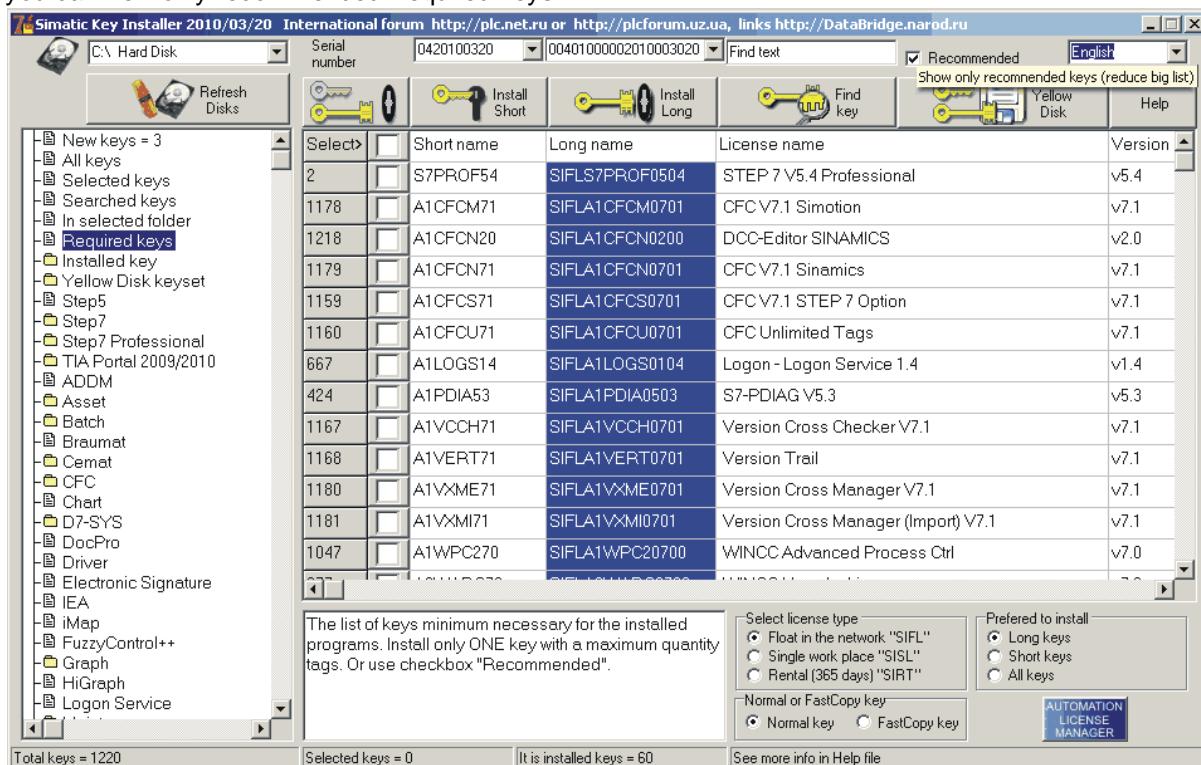

you can view only recommended keys

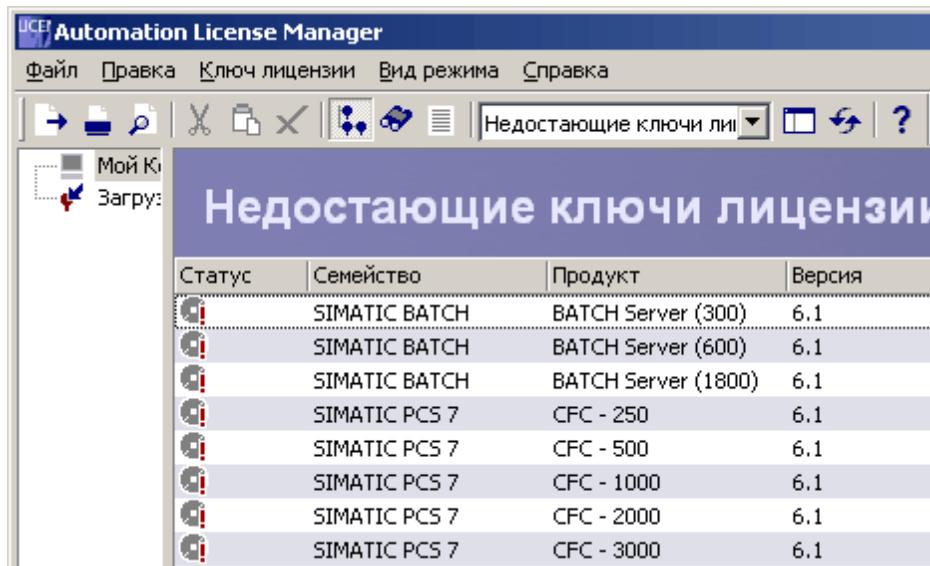

1.5.1 Recommended

you can view only recommended Required keys

1.5.2 Missing keys

You can specify names of missing keys in the manager of licenses ALM

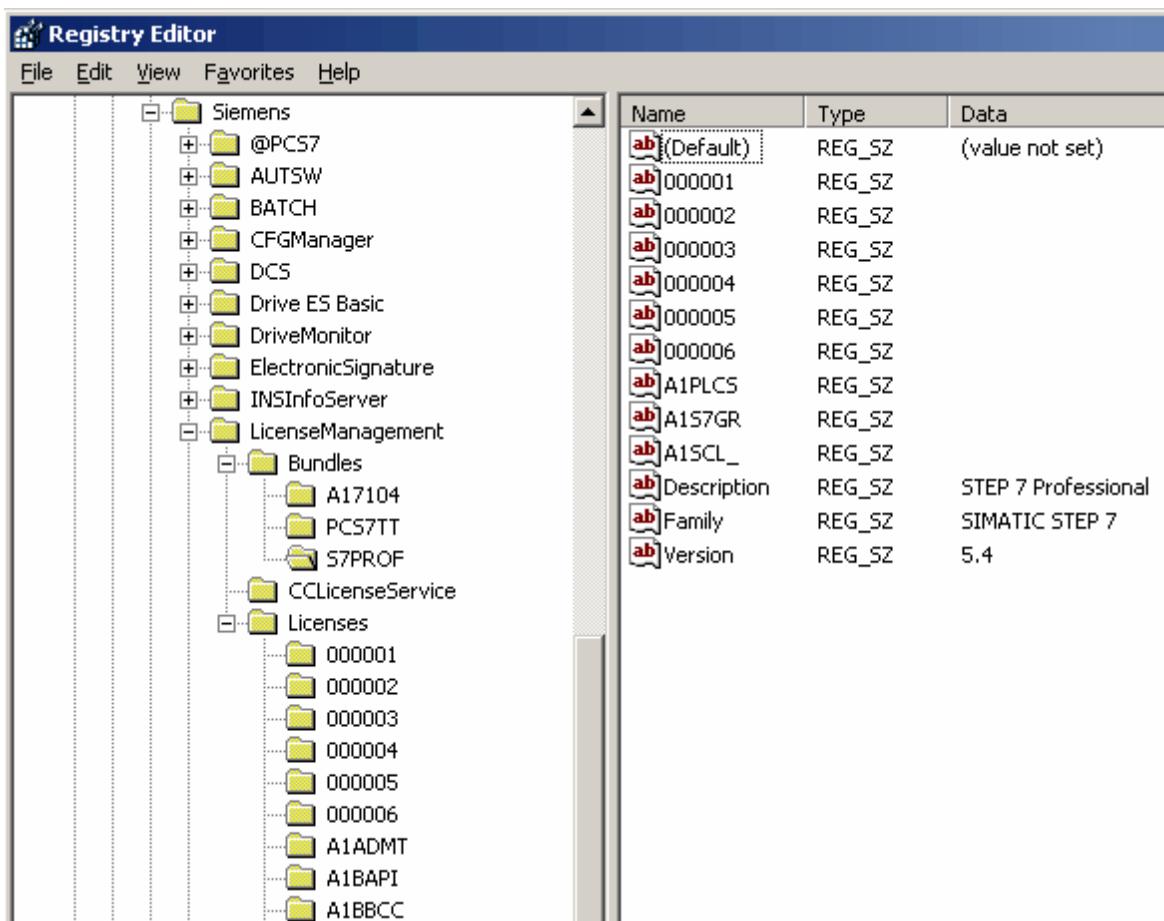

1.5.3 Bundle keys

Complex key **S7PROF*** for professional version STEP7 can be used instead of 4 separate keys **A17104***, **A1PLC_***, **A1S7GR_***, **A1SCL_***.

SIFLS7PROF1100.EKB STEP 7 V11 Professional **combo** key for use with STEP7 Professional version v5.5 and v11.0

SIFLA9XEP11100.EKB WinCC flexible Advanced **combo** key for use with WinCC flexible 2008 and WinCC Advanced v11.0

Key **PCS7TT*** for program PCS7 can be used instead of the whole complete set of keys.

1.6 Displaying the Installed License Keys

Displaying the Installed License Keys

You can view all installed license keys using the line "Installed only" in the tree view or select the drive in the list

| Select | Short name | Long name | License name |
|--------|------------|----------------|----------------------------------|
| 446 | A1LOGS13 | SIFLA1LOGS0103 | Logon - Logon Service 1.3 |
| 9 | PCS7TT61 | SIFLPCS7TT0601 | PCS7 6.1 SP1 RC 150K PTg 512 ATg |
| 1 | S7PROF54 | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| 408 | A1S5BP66 | | STEP5/ST-BASIS PC V6.6 |

| 4 | RTASS461 | SIFLRTASS40601 | Asset RT 2048 Tags |

1.7 Select key

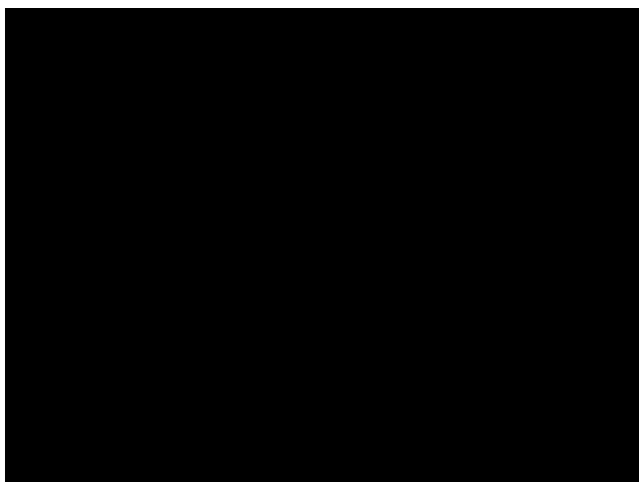

For a choice of a key press on Check Box.

Repeated pressing will cancel a choice.

For a choice of all keys in current section press Check Box in the first line.

Repeated pressing will cancel a choice in current section.

| Select> | <input type="checkbox"/> | Short name | Long name | License name |
|---------|-------------------------------------|------------------------------|----------------|--------------------------|
| 1 | <input type="checkbox"/> | Select all key in this group | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| 2 | <input checked="" type="checkbox"/> | S7PROF53 | SIFLS7PROF0503 | STEP 7 V5.3 Professional |

1.8 Find key

Full-text search is a search for a word or a word combination through the complete text of all entries in the database.

Type the necessary word or word combination in the Edit line or copy them from the Clipboard and click "Find key" button.

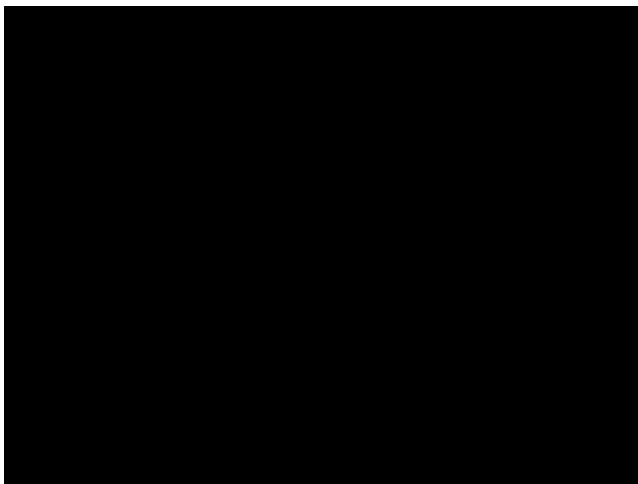

For example:

- part of key name [Step](#) or [Step prof](#)
- part of filename [s7prof](#)

| C:\ Hard Disk | Serial number | 0420061231 | 00401000002006012031 | Step |
|---|--|---|--|---------------------------------|
| | | | | |
| <input type="checkbox"/> Refresh Disks | <input type="checkbox"/> Short | <input type="checkbox"/> Long | <input type="checkbox"/> Find key | <input type="checkbox"/> Yellow |
| <input type="checkbox"/> New key | <input type="checkbox"/> Short name | <input type="checkbox"/> Long name | <input type="checkbox"/> License name | |
| <input type="checkbox"/> All keys | <input type="checkbox"/> S7PROF54 | <input type="checkbox"/> SIFLS7PROF0504 | <input type="checkbox"/> The "Find" button is used to locate license keys. | |
| <input type="checkbox"/> Selected only | | | <input type="checkbox"/> STEP 7 V5.4 Professional | |
| <input type="checkbox"/> Find 22 "STEP" | | | | |
| <input type="checkbox"/> In selected folder | <input checked="" type="checkbox"/> S7PROF53 | <input type="checkbox"/> SIFLS7PROF0503 | <input type="checkbox"/> STEP 7 V5.3 Professional | |

The table displaying the list of entries containing the search pattern you entered.

I always use this option

1.9 Unknow keys

Example of new keys after installation of new programs.

| Serial number | Short name | Long name | License name | Version |
|---------------|------------|----------------|---------------------------------|---------|
| 731 | A9SDC140 | SIFLA9SDC10400 | System Diagnostics - CPUs 400 | v4.0 |

| 568 | <input type="checkbox"/> A1710452 | | Save table to text file: Installed key.txt Create YD with 1 key : SIFLS7PROF0503 |

1.11 FastCopy keys v3.0

Second generation of LONG FastCopy license keys anew work with ALM v3 and ALM v4.0

"Fastcopy" keys could be copied simply in the directory of licenses C:\AX NF ZZ.

"Fastcopy v1" used auxiliary "hole" in system of authorization ALM <v3.0 which have been covered with output Step7 v5.4 SP1.

It is developed in connection with release of version ALM 3.0 - the Authorization Licenses Manager after whom, so-called, "fastcopy" long keys of authorization have ceased to work because of their ignoring by this Authorizator.

"Fastcopy v3" work without problems with ALM v3 and ALM v4.0.

Only FastCopy key from EKB_Install is really FastCopy key.
"Fixed" and "FastCopy" key from EKB_Backup (by Fubrus) have bugs.

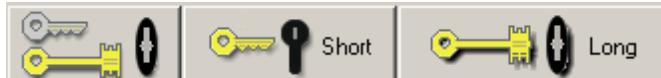

but wait ALM 4.1

1.12 Installing License Keys

You can install one key or group of the chosen keys on the specified flexible, rigid disks or external USB a disk (Flash stick or Flash card in cardreader).

Thus there are some variants.

It is possible to choose one of variants of installation chosen keys:

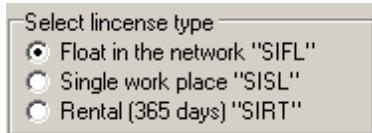

1. All - short and long
2. Only long
3. Only short
4. Installation with preference:

- Are installed long and if is not present long for the chosen type of the license the short variant of a key is installed.
- Are installed short and if is not present short for the chosen type of the license the long variant of a key is installed.

Select type of keys: Float, Single, Rental, Long, Short

Thus on the button of the general installation the picture according to a choice varies.

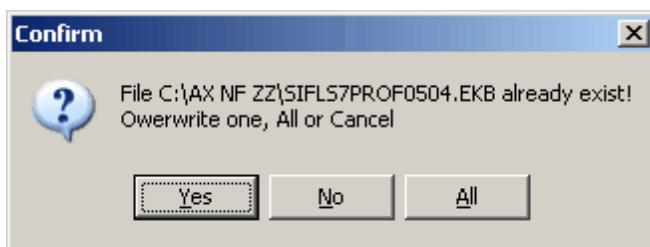

If you connect or disconnect replaceable carriers during work of the program for updating the list of carriers{bearers} press the button " To update the list of disks ".

Again connected carrier will appear in the list.

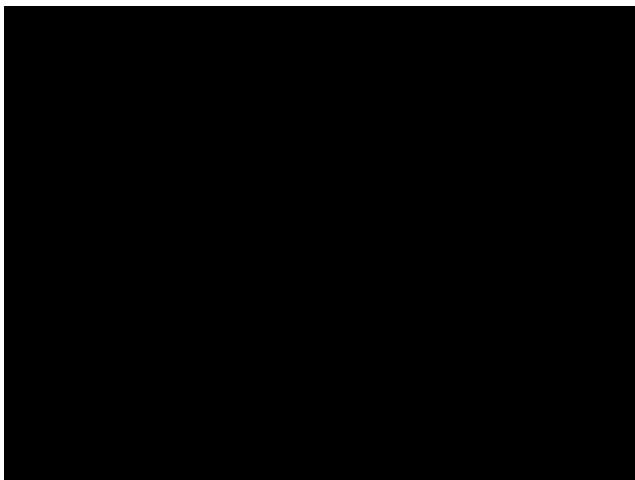

After installation corresponding names of keys will be painted

| | | |
|--|----------------|--------------------------|
| <input checked="" type="checkbox"/> S7PROF54 | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| <input checked="" type="checkbox"/> S7PROF53 | SIFLS7PROF0503 | STEP 7 V5.3 Professional |

If the key is already installed on a disk there will be a window with the request to confirm installation atop of available.

[****]

See Check of keys after installation

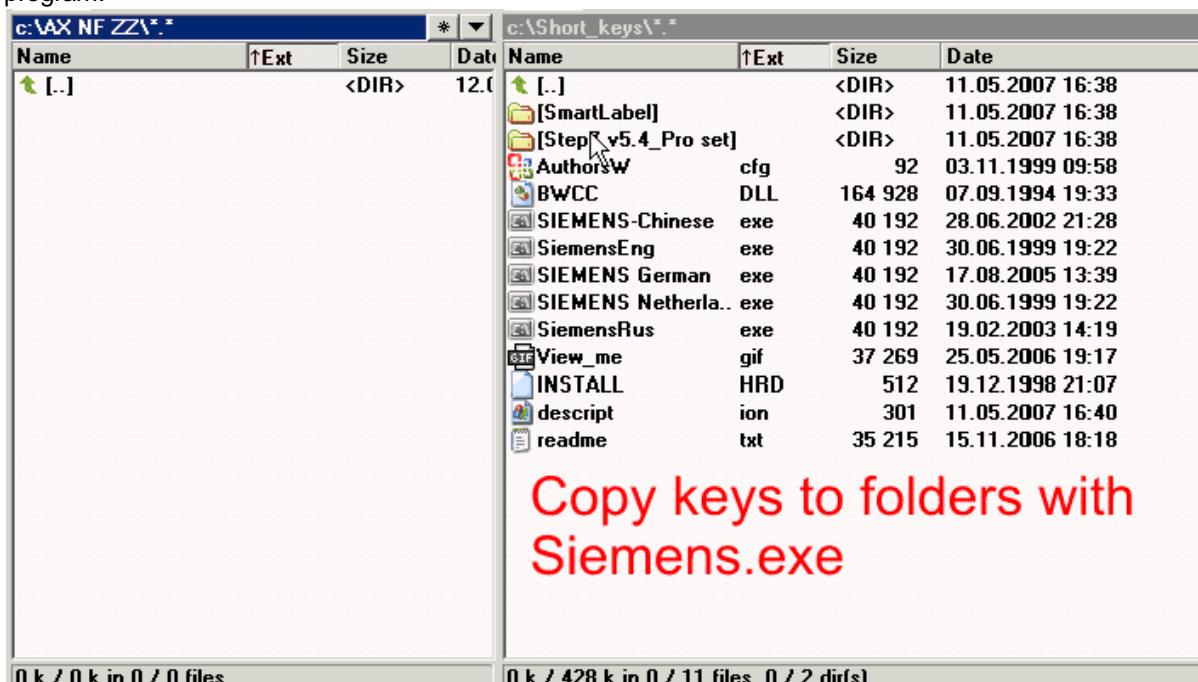

[****]

1.12.1 Old Siemens.exe

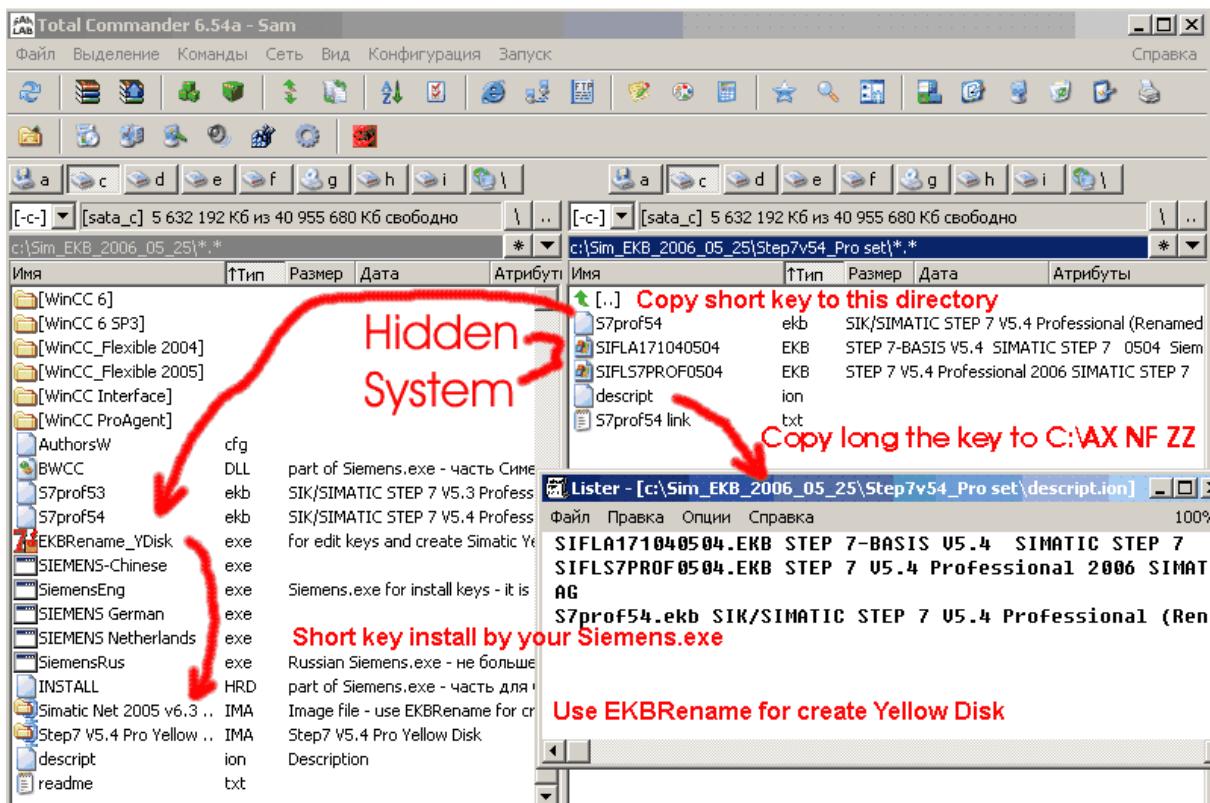

For installation of short keys from a set it is possible to use program Siemens.exe.

Copy in the catalogue with the program demanded keys (no more than 100 keys lumpsum) and start the

program.

Copy keys to folders with
Siemens.exe

If in the catalogue with Siemensexe there are no keys at start the following message will be show.

1.12.2 Type of key

Licenses in the Automation License Manager

The standard license types and license types listed below are available:

| Standard License Types | Description | |
|---|--|---|
| Single license SISL*.EKB and all short keys (not X*.EKB) | Use of the software with this license is permitted on any one computer for an unlimited period. The type of usage is defined by the certificate of license. | Unlimited use on any one computer. Unlimited by time Count tags relevant license |
| Floating license SIFL*.EKB | Use of the software with this license includes right of use for simultaneous usage for an unlimited period. The software can be installed at multiple locations. | Unlimited use on any one computer or via the network. Unlimited by time Count tags relevant license |
| Count relevant license SIFC*.EKB | Use of the software with this license is limited to: <ul style="list-style-type: none"> • The number of tags stipulated in the agreement | Count tags relevant license |
| Rental license | Use of the software with this license is limited to: | Limited use as stipulated in the rental contract. |

| | | |
|-----------------------------------|---|--|
| SIRT*.EKB SIMF*.EKB | <ul style="list-style-type: none"> The number of hours stipulated in the agreement SIMF*.EKB The number of days after first use as stipulated in the agreement SIRT*.EKB <p>Note: the time remaining for the rental license is indicated in the information area of the tooltips taskbar.</p> | <p>Limited by time:</p> <p>1..50 hours</p> <p>1...N days</p> <p>To install 365 days Rental keys:</p> <div style="border: 1px solid black; padding: 5px;"> <p>Select lincense type</p> <p><input checked="" type="radio"/> Float in the network "SIFL"</p> <p><input type="radio"/> Single work place "SISL"</p> <p><input type="radio"/> Rental (365 days) "SIRT"</p> </div> |
| Trial license SITT*.EKB | <p>Use of the software with this license is limited to:</p> <ul style="list-style-type: none"> A validity period of, for example, a maximum of 14 days. | | | |

| | | |
|---|---|---|
| Unlimited license | Use of the software with this license is unlimited. | |
| Count relevant license (Tags) SIFC*.EKB | <p>Use of the software with this license is limited to:</p> <ul style="list-style-type: none"> The number of tags stipulated in the agreement (for WinCC, PDM, CFC and others). The number of PowerObjects (PO) stipulated in the agreement for PCS7 v7. PO ~ Tags | SIFCY9WTGX06001 |
| Pay per use license SIFP*.EKB | <p>Use of the software with this license is limited to the use conditions stipulated in the agreement.</p> <p>Number of Clicks !?</p> | SIFPZASRPX99991 |
| Demo license | <p>Use of the software with this license is limited to:</p> <ul style="list-style-type: none"> The number of hours stipulated in the agreement The number of days after first use as stipulated in the agreement <p>Note: the time remaining for the demo license is indicated in the information area of the Quick Info taskbar.</p> | |
| Contract license | Use of the software with this license is unlimited. | |
| Upgrade license SIUP*.EKB SIPP*.EKB | <p>An upgrade may call for specific system status requirements:</p> <ul style="list-style-type: none"> An upgrade license enables you to convert an "old" version V to a version >V+... license. An upgrade may be required, for example, if you wish to increase the number of computers running an application. | <p>Keys for updating the license consist of two keys *.EKB and *.UPG.</p> <p>No need wait SIUP* key. I haven't Upgrade keys.</p> <p>Install on SIFLA9WRC7060*.EKB WINCC-V6 RC 256K PTg 512 ATg</p> <p>see more about upgrade keys</p> |

Missing license key

A license key that is required by the software but is not available in a "valid" form on the network is designated as a missing license key.

1.12.3 CAL license

Question:

If it is the license from Microsoft as the information on presence CAL of the license is entered into a computer-client, in fact on it there are no installations MS SQL Server, especially, ALM?

In what kind it is bought the CAL-license (is delivered)?

The answer:

The license for a paper. Accordingly, she is not entered neither into a computer, nor in ALM.

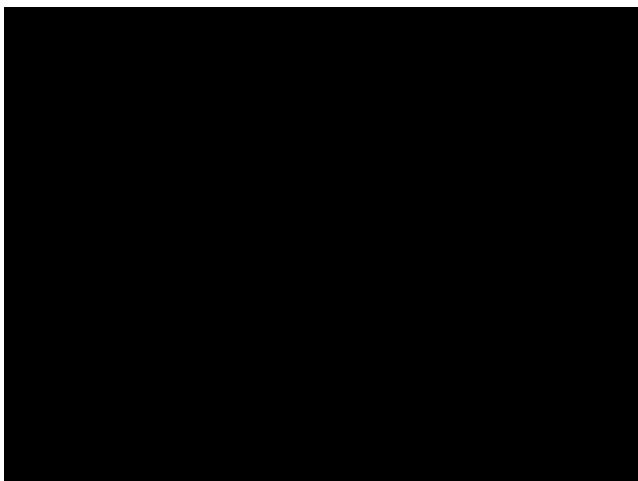

1.12.4 Installation of Trial keys

For some programs it is possible to install temporary Trial keys for the term of from several o'clock about a year of work.

A **SITT*.EKB** Trial License Key is installed from the CD.

It can be activated via the actual SIMATIC application once for 14 days and is for evaluation purposes.

You cannot restore or move the Trial License Key, but you can remove of Trial keys and their traces and reinitialize Trial key anew.

During installation of a temporary key in catalogues **Windows** and **Windows\System32** catalogues ***attis** with one empty file are created.

Temporary key **SITTA*.ekb** is installed in catalogue **C:\AX NF ZZ**

After the ending of term of work it is necessary to remove Trial keys and their traces.
Otherwise problems are possible at work of normal keys.

1.12.4.1 Remove Trial keys (official)

<http://support.automation.siemens.com/WW/view/en/24200966>

How can you deactivate the Trial License when the message appears indicating that the Trial License has expired, although the Floating License has been installed?

Instructions:

Once activated the Trial License is valid for limited use up to a maximum of 14 days of the SIMATIC Software for tests, for example. If after expiry of this time you install a license for unlimited use (Single, Floating or Upgrade License) and after installation you still receive the message indicating that the Trial License has expired, we recommend deleting the Trial License in the "AX NF ZZ" folder.

Procedure for deleting a Trial License

1. Open the ALM in MS Windows via

- "Start > SIMATIC > License Management > Automation License Manager"

and mark the drive (e.g. "C") on which your licenses are installed. Displayed in the right window of the Automation License Manager is the table of the licenses installed. For viewing the licenses you need the file name (License Key) and the 20-digit license number. If these columns are not yet displayed, then via

- "View > Define..."

you open the "Define View" dialog. In the bottom section of this dialog you select the "Columns" tab and then "License key" and "License number".

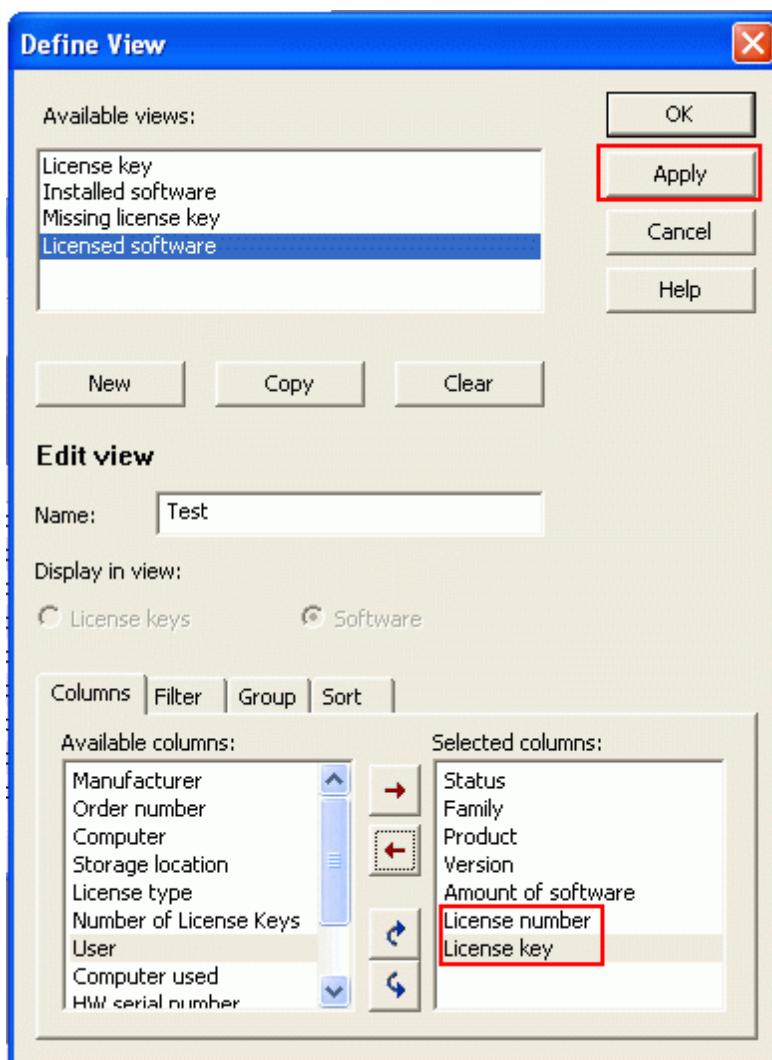

Fig. 01

Then you enter a name under "Edit view" and click the "Apply" button. Acknowledge with OK and the "License key" and "License number" columns appear in the Automation License Manager.

2. In the Explorer you mark the "AX NF ZZ" directory on your hard disk or on drive "C", so that the file names of the licenses are displayed in the right window of the Explorer.

If the "AX NF ZZ" directory or the files in that directory are not visible, then open the dialog "Tools > Folder options..." and select the "View" tab:

- Here you deactivate the option "Hide protected operating files (Recommended)" and
- Activate the option "Show hidden files and folders".

Then click on the "Apply" button and acknowledge with "OK".

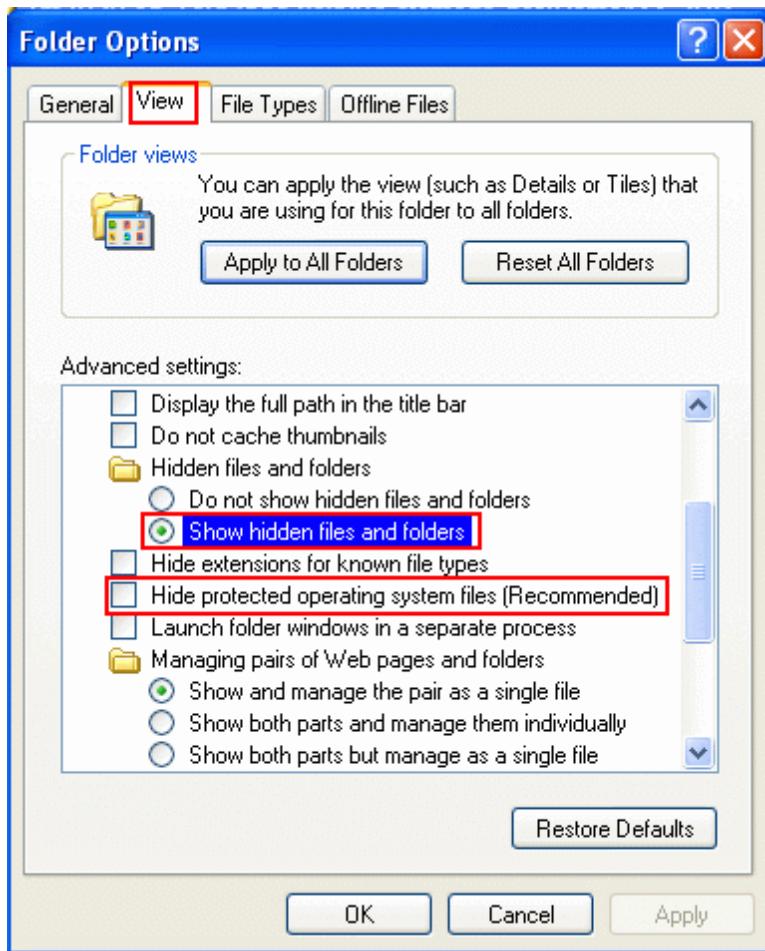

Fig. 02

The "AX NF ZZ" directory is then displayed in the Explorer.

3 Now in the Automation License Manager compare the file name (License Key) of the Trial License with the file name in the "AX NF ZZ" folder. Via the view set in the Automation License Manager you determine the file name for the Trial License to be deleted (Fig. 03) that you then find in the "AX NF ZZ" folder.

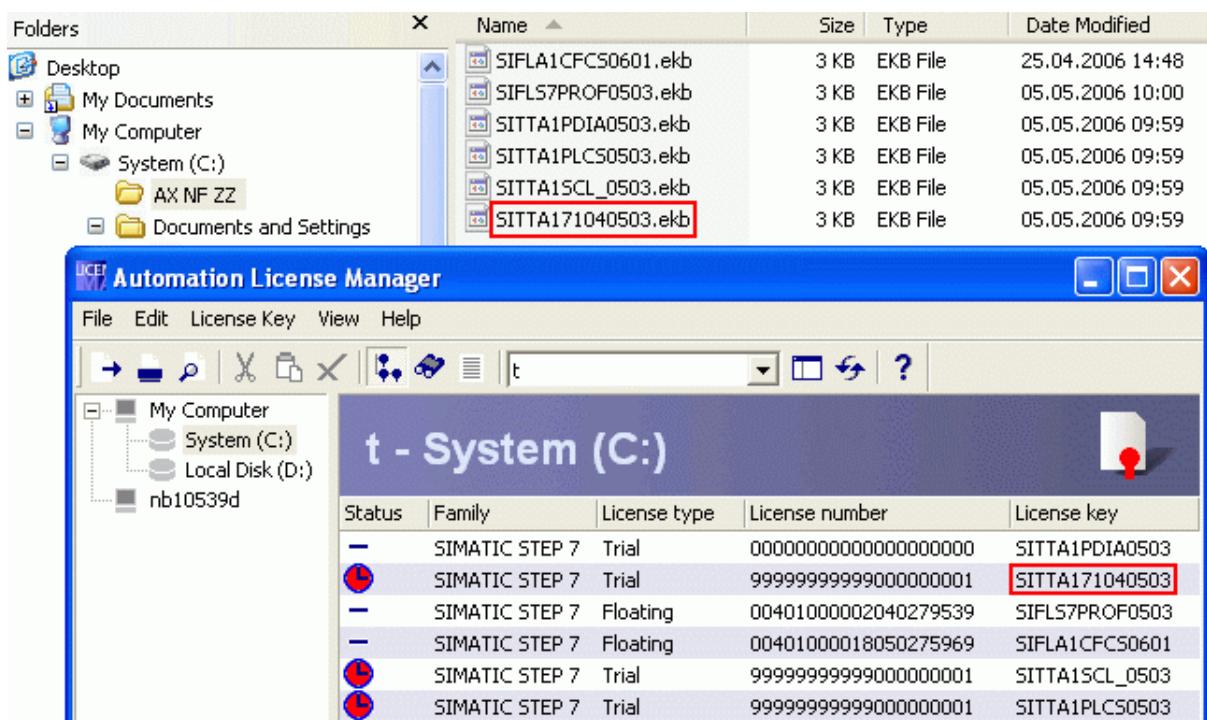

Fig. 03

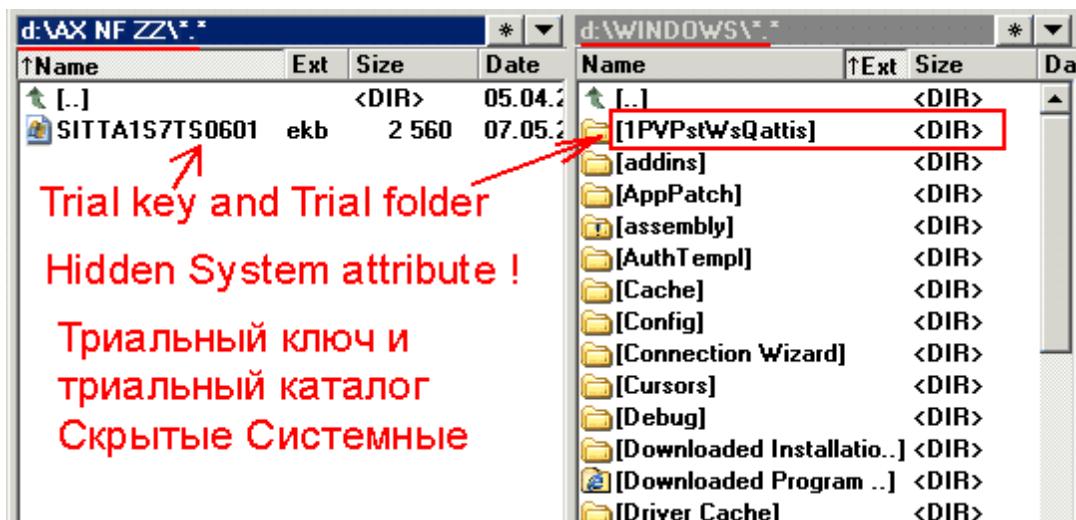

4 Mark the Trial License found in the "AX NF ZZ" directory and right-click. Then select "Delete" in the pop-up menu that opens. After deletion the message described above will no longer appear.

But need also: Removal of Trial keys and their traces

1.12.4.2 Removal of Trial keys and their traces

After the ending of term of work it is necessary to remove Trial keys and their traces *attis in folders **Windows\Windows\System32** or **Windows\Sysnative**

Otherwise problems are possible at work of normal keys.

After removal of Trial keys and their traces in C:\Windows, C:\Windows\System32 or C:\Windows\Sysnative (for W7 x64)
it is possible to install Trial keys again

Cleared

Delete trial keys

Delete trial folders

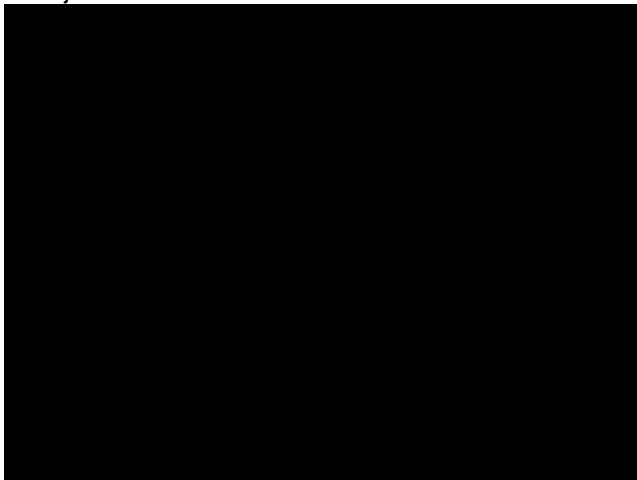

| Status | Product | Version | Standard license type | License type | License number | License key |
|-----------|---------|---------|-----------------------|--------------|----------------------|----------------|
| STEP 7 | 5.5 | Single | | Trial | 00000000000000000000 | SITTA1PLCS0504 |
| S7-PLCSIM | 5.4 | Single | | Trial | 00000000000000000000 | SITTA171040505 |

See also: How can you deactivate the Trial License

1.13 Check of keys after installation

After installation of keys it is required to lead procedure of check of a key in program ALM.

Otherwise in some cases at start of the program you can see the warning of absence of a key which you have just installed.

1.14 License Number

License Number

The license number is the unique identifier of a license.

There are 2 lines for input of serial numbers, so-called ID KHE, usually specified on yellow license diskettes and applied certificates.

| | | |
|------------------|------------|----------------------|
| Serial number | 0420061231 | 00401000002006012031 |
|------------------|------------|----------------------|

10 symbolical number is intended for short keys.

20 symbolical number is intended for long keys.

You can not change these numbers, and give it to make to the program or select one of the available serial numbers of installed keys in the drop-down list box.

| | |
|------------------|------------|
| Serial number | 0420070112 |
| | 0123456789 |
| | 0420061227 |
| | 0420061228 |
| | 0420070112 |

1.15 Select disk

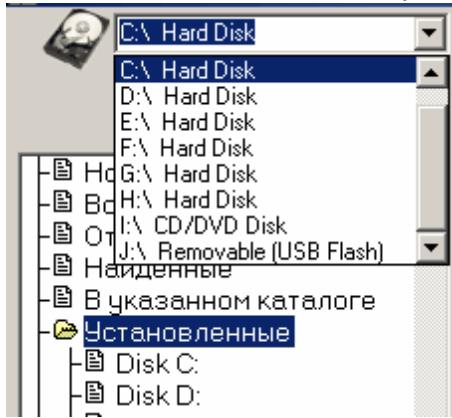

Storage Location for License Keys

You can store license keys on storage media such as license key diskettes (for authorizations, on authorization diskettes) or on removable drives (but not on CD, CDRW) or USB memory sticks.

License keys can be located locally on your own computer as well as on a network computer.

Drive (hard disk, floppy drive, USB memory stick) on a computer (My Computer or network computer) where a license key is or can be stored.

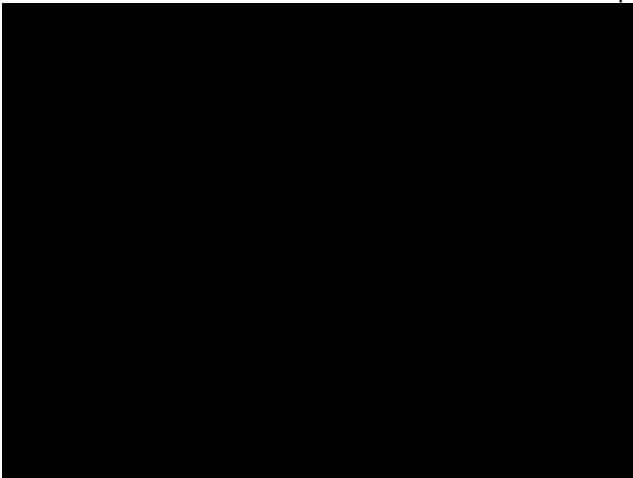

Choose a disk for installation of keys by means of the dropping out list.

In case of if during work it is inserted or the replaceable carrier{bearer} is taken out (for example USB Flash) it is required to press on the button " To update the list "

After that in the list the current set of disks will be displayed.

There are restrictions of programs of authorization AuthorsW and ALM.

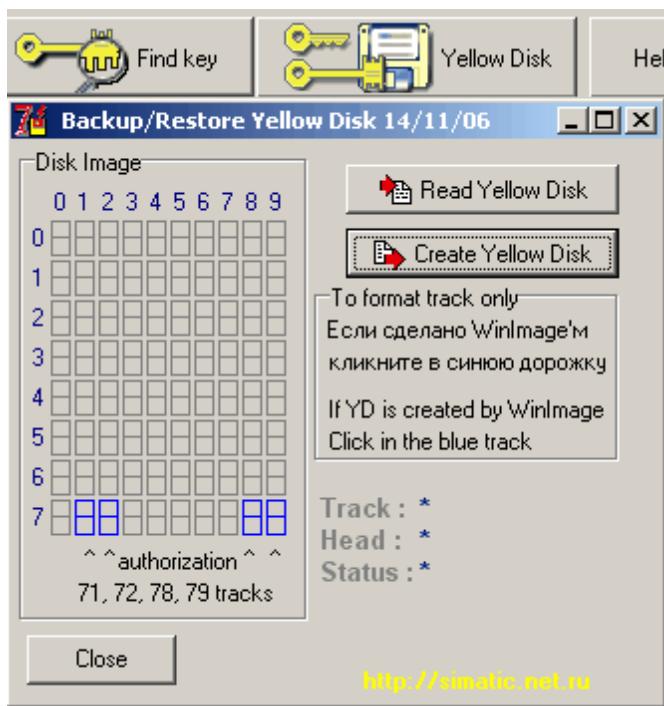

Short keys cannot be transferred{carried} on the replaceable carrier and to install from it.

1.16 Yellow disk

As from STEP 7 V5.4 SP2 the license is supplied on a USB stick.

The button of a call of a window for work with images of Yellow diskettes

By means of this utility it is possible to create Yellow a diskette from images of several types:

IMA, IMZ* - WinImage

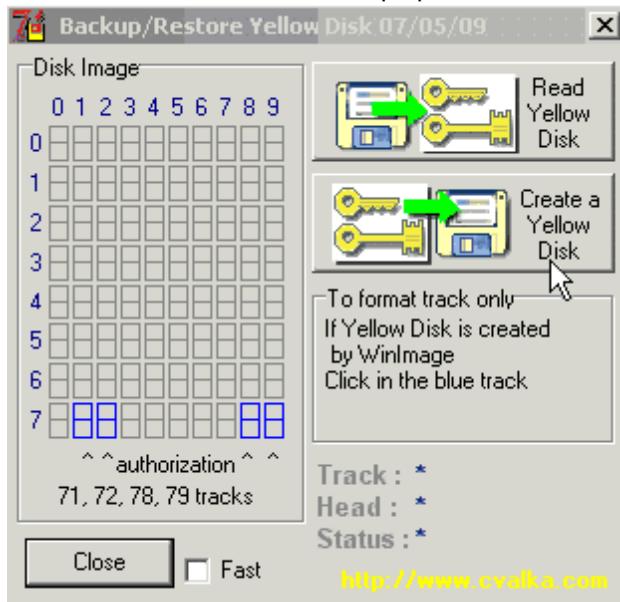

IMG - FloppyImage

BIN - FDA (Floppy Disk Analyzator for DOS)

*Compressed images in format **IMZ** (WinImage) should be unpacked preliminary in a file with expansion **IMA**.

On end of record the "license" path will be formatted.

At the moment Siemens for this purpose uses tracks from 71 up to 79.

If you have already created Yellow a diskette in other program (in the same WinImage or FloppyImage), That you can format separately a "license" path, having pressed on a corresponding cell.

Correctness of creation of a diskette can be checked up in the program of authorization AutorsW or ALM,

Having chosen check of integrity of any key.

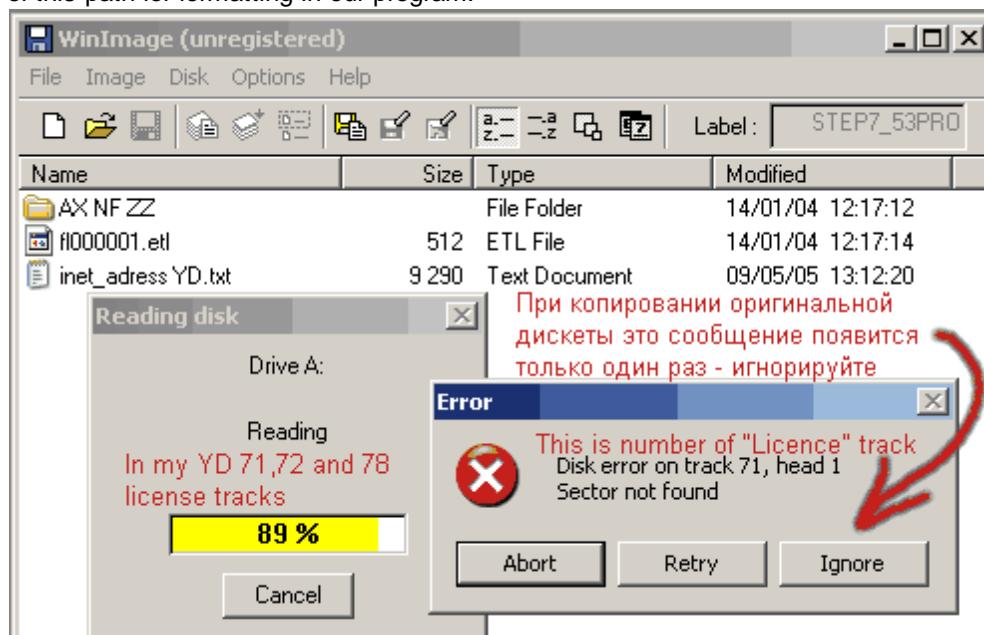

On characteristic "gnash" of the step-by-step engine of moving of a head it is possible to define (determine) also about success of procedure.

If you will not hear "gnash" - the diskette means was created incorrectly or the necessary path has not been formatted.

In this case can format consistently paths from 71 up to 79 and check in integrity in ALM.

For reading firm Yellow diskettes in a file-image can use the button " Read Yellow Disk " or consider {count} through program WinImage.

At attempt of reading of "license" path WinImage will give out the prevention{warning} of a mistake{an error} of reading. Press button " Ignore " for continuation of creation of an image. Can remember number of this path for formatting in our program.

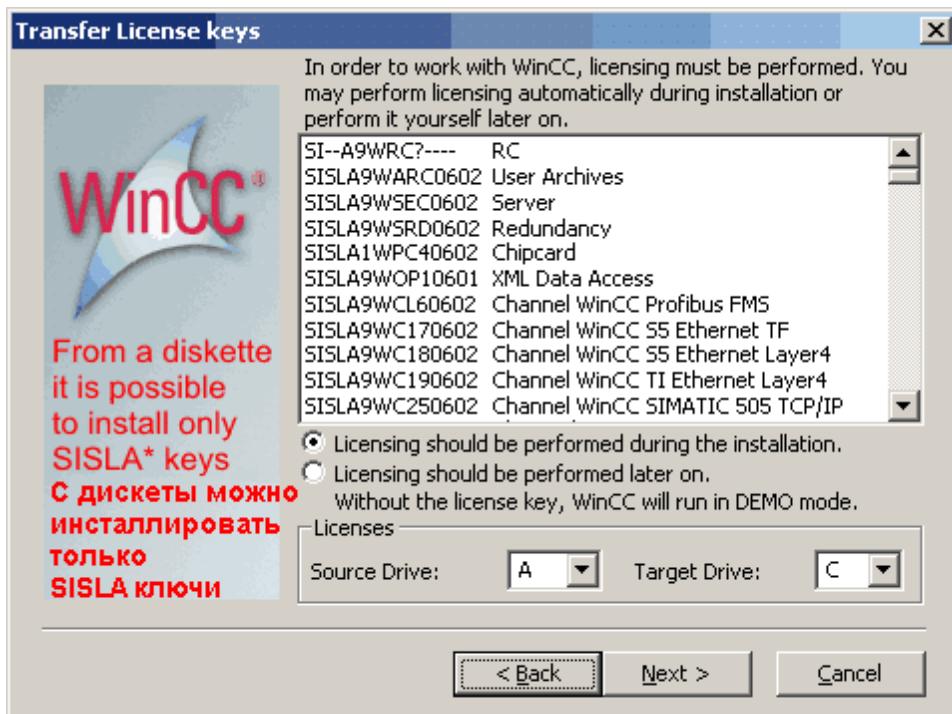

If the error of reading has occurred in the beginning or the middle firm diskettes then this a diskette has already started to become unfit for use.

Diskettes written down by program FDA contain many paths wrongly formatted non-standardly - also ignore these errors.

Not leaving from WinImage you can just write down the received image on duplicating a diskette and then to format a "license" path in our program.

For some programs (in particular WinCC and WebNavigator) from a diskette it is possible to install only SISLA keys.

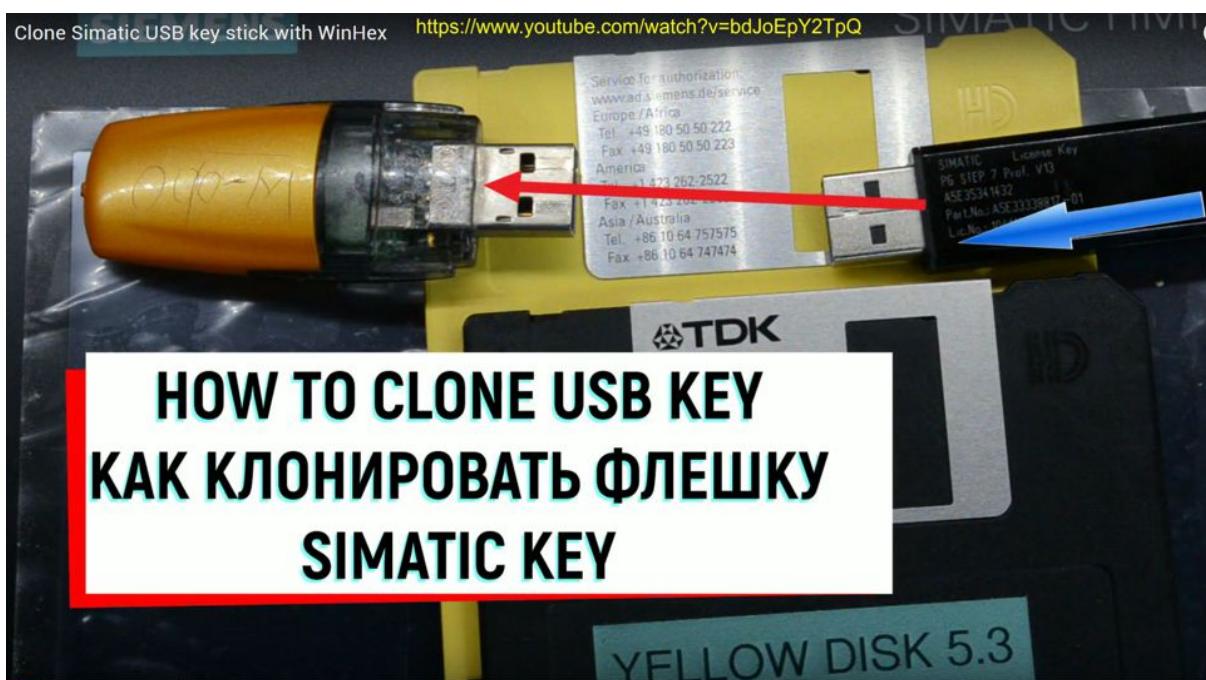

On what that to reason SIFLA* keys are ignored at installation - their names are rigidly hammered in Setup.

1.17 Yellow Flash and Clone

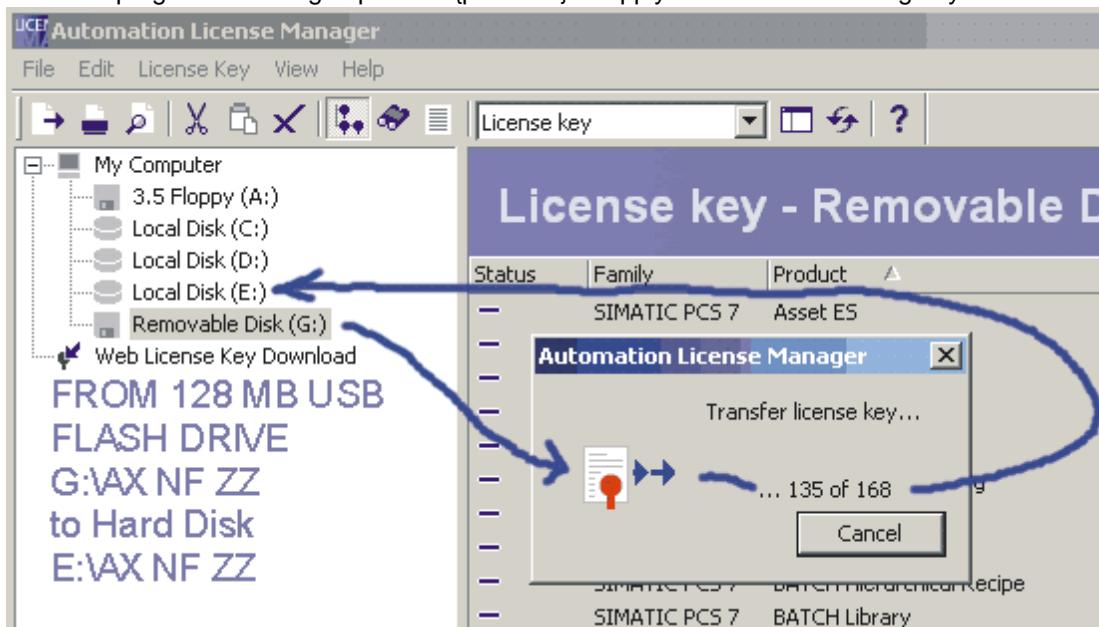

Video How to clone a USB stick

<https://www.youtube.com/watch?v=bdJoEpY2TpQ>

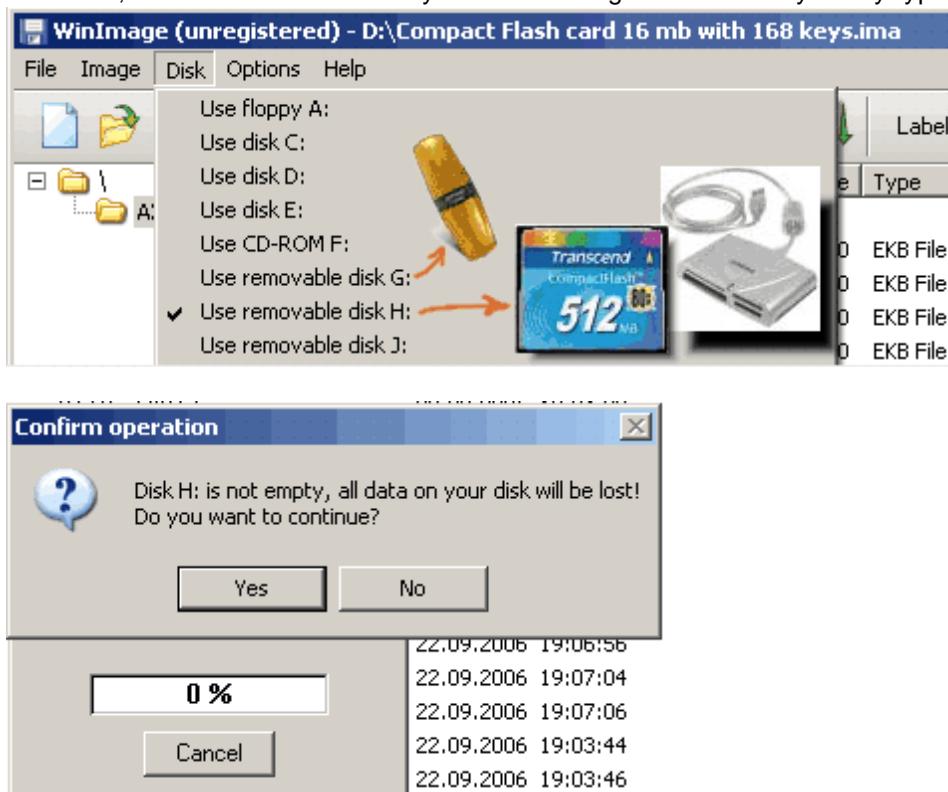

As from STEP 7 V5.4 SP2 the license is supplied on a USB stick.

At use of program ALM began possible{probable} to apply as the carrier of long keys Flash memory.

You can transfer long keys on Flash memory and by means of program WinImage to make an image of this Flash, and then to restore all keys from this image Flash memory of any type and the size.

1.18 ALM

The Automation License Manager is a product of Siemens AG Automation & Drives Group.

It is used to manage license keys (the technical form of licenses).

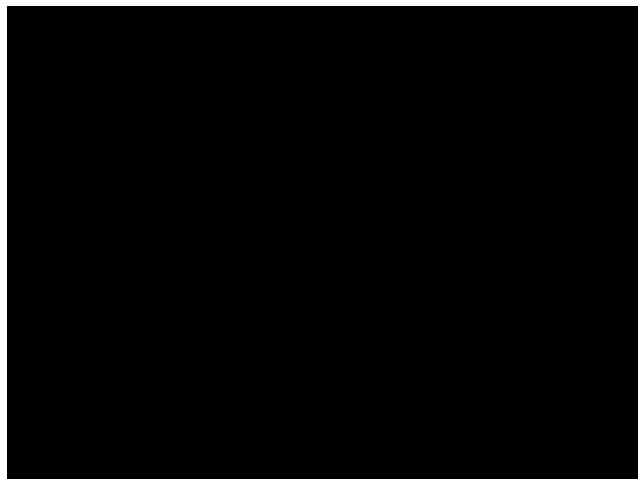

Software products requiring a license key automatically report this requirement to the Automation License Manager.

When the Automation License Manager finds a valid license key for this software, the software can be used in conformity with the end user license agreement.

It is developed in connection with release of version ALM 3.0 - the Authorization Licenses Manager after whom, so-called, "fastcopy" long keys of authorization have ceased to work because of their ignoring by this Authorizator.

"Fastcopy" keys could be copied simply in the directory of licenses C:\AX NF ZZ. They used auxiliary "hole" in system of authorization ALM <v3.0 which have been covered with output Step7 v5.4 SP1.

**Also additional coding the keys, therefore new keys have been applied are not visible in ALM v2.2.
New keys are not visible in ALM v1 and v2.**

1.19 transferring a license key to a PC without floppy disk drive

What options are there for transferring a license key to a PC without floppy disk drive?

Configuration Notes:

For some time now computers have been produced without a floppy disk drive. However, in order to install certain automation software products you need a floppy disk drive to install the license keys supplied on floppy disk.

Using the Automation License Manager you can install the licenses on a PC without floppy disk drive as follows.

| Transport Medium | License Key Type | |
|---|---|--|
| | Authoriza tion (e.g. STEP 7 V5.2) | License Key (e.g. Floating License Key STEP 7 V5.3) |
| External floppy disk drive with USB interface | X | X |
| USB stick as transfer medium from one computer with floppy disk drive to a computer without floppy disk drive | -- | X |
| Second computer with floppy disk drive in the company network and transfer via the network | X ¹⁾ | X ¹⁾ |
| Second computer with floppy disk drive and offline transfer (see Help of the Automation License Manager) | X ¹⁾ | X ¹⁾ |

¹⁾ The Automation License Manager must also be installed on both computers.

Note:
You can recognize a License Key in the Automation License Manager by the twenty-digit license number.
An authorization has a ten-digit license number.

1.20 Multikey

1.21.5 New keys

Keys for some new Simatic programs will appear in the list **only after installation** of these Simatic programs on your computer.

For example - new key for new version of Teleservice

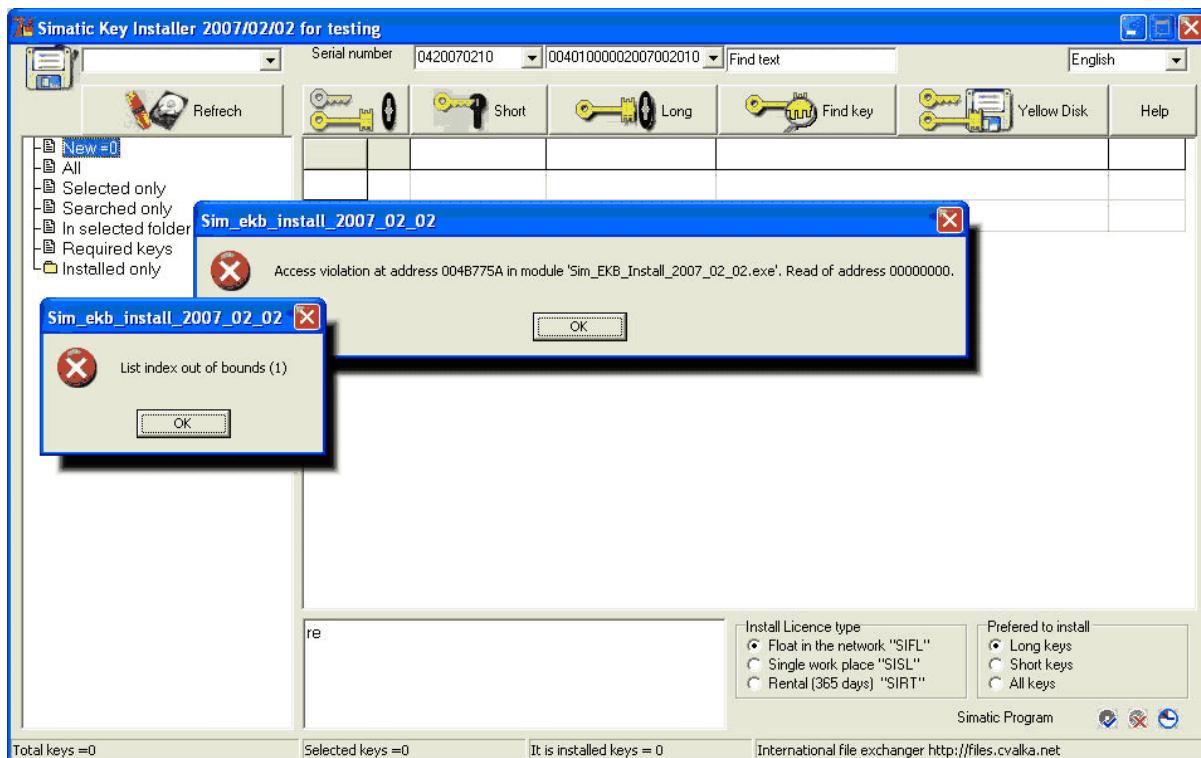

1.21.6 List index out of bounds

Problem:

When run the application in my computer come out error window.

In another computer computer the application running correctly.

This are the print screen of the error.

I had the same problem as the one described on your web page.

Access violation at address 004BDF4E in module 'Sim_EKB_Install_2007_11_27.exe'. Read of address 00000000

I have a laptop with only one harddrive no floppydrive.

When I start the program it makes the "access violation" error,

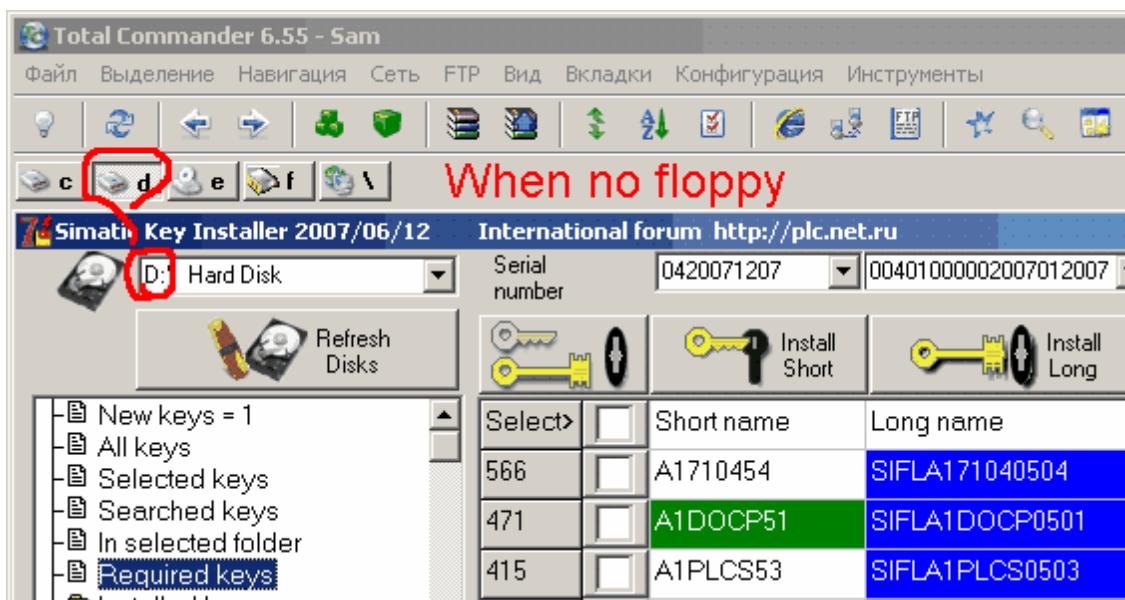

when I then add an usb drive the program can start.

It seems like the program wants to select disk number 2 in the dropdown box, it would normally be the "c" drive but only if you have a floppy drive installed.

I also have a laptop with only one harddrive no floppydrive,

but I divide a disk into 2 partitions C:\ and D:\.

Therefore I do not see similar errors

"in Russian"

1.21.7 Problems with ALM v3.0 HF3

On some computers right after installations of updating of program ALM 3 HF3 (from Step7 v5.4 SP2) can arise problems with working capacity of original and not original keys.
The reason of an error while is unknown.

Method of the decision of a problem.

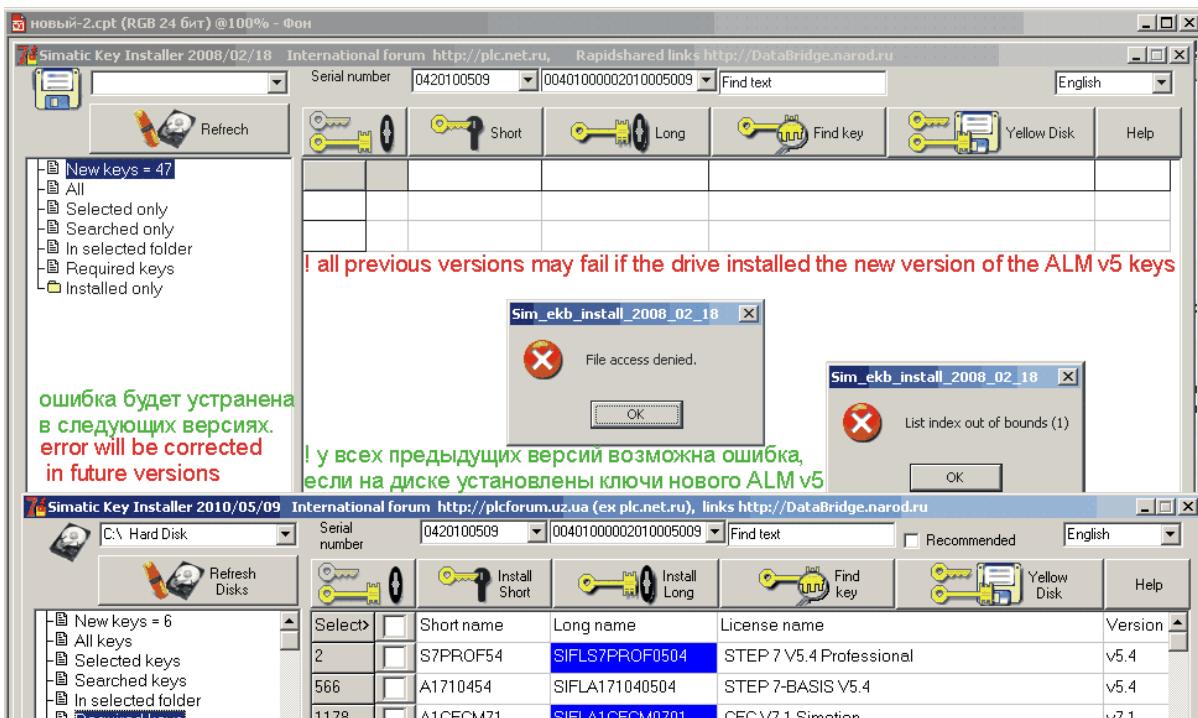

1. Reload a computer.
2. Check up keys through program ALM.
3. Try to reinstall program ALM.
4. Reinstall keys.
5. Deinstall the new version of the program and install previous version ALM 3 HF1.

1.21.8 Problems with ALM v5.0

v2010.05.09

! all previous versions may fail if the drive installed the new version of the ALM v5 keys !
error will be corrected in future versions

Because of the new release ALM v5 may be many intermediate versions as far as finding new challenges.

1.21.9 BATCH

Calculating the units for the BATCH station

License key for BATCH station

A defined number of units can be operated and monitored with this license key.

The number of units that can be processed depends on the utilization of the BATCH server.

Example: BATCH Server (20)

The license key for BATCH server is adequate for configuring up to 20 units.

Requirement

? SIMATIC Manager is open.

Procedure

- In the SIMATIC Manager, select the multiproject/project for which you want to calculate the number of configured units.
- Select the menu command Options > SIMATIC BATCH..
- The "Configure BATCH Process Cell" dialog box opens.
- Select the "BATCH Process Cell" folder in the tree view.
- In the "Process Cell" section, click "Check validity".
- In the "Log" group, enable the "Validate" check box.
- Click the "Display" button.

Result

A log file opens in the Internet Explorer.

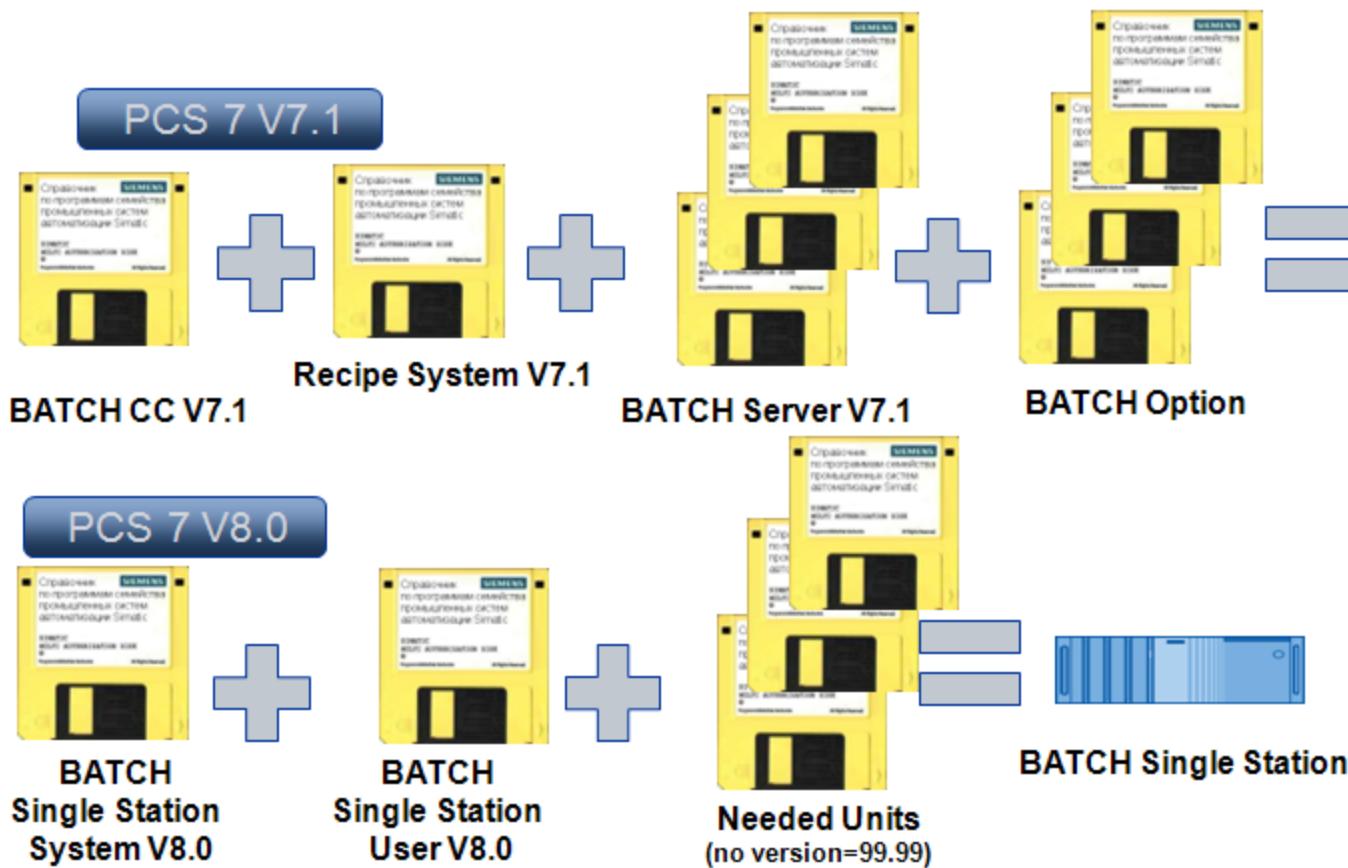

? If the "Check validity" or "Compile" function shows an error in the configuration, you will need to correct the error and calculate the process objects again.

? If the configuration is free of errors, you will find the number of units configured in the multiproject/project in the table under the heading "Units".

? You can calculate the number of configurable units based on the license keys through the Automation License Manager.

Example of the layout of a log file:

| Plant | Units | Log | Date, time | Result |
|---------------------|-------|--------------|--------------|----------------------|
| <process cell name> | 11 | Plausibility | <date, time> | 0 errors, 0 warnings |
| No. | ID | Error | Warning | Remedy |

1.21.10 CFC: AS License key for engineering

License key for the AS

The required license key for all SIMATIC stations depends on the total number of process objects loaded and configured in a project (multiproject).

When an AS is loaded, the loaded process objects are evaluated.

The following procedure shows you how to calculate the number of process objects configured in a project.

With a multiproject, you need to determine the number per project and add them together.

The following applies as of PCS 7 V7.0 SP1:

The number of process objects loaded into the AS is calculated and subtracted from the available process objects (countable license keys).

You calculate the number of available (still to be loaded) process objects using the license key via the Automation License Manager or in SIMATIC Manager via the menu command

Options > Charts > Process Objects Statistics.

Display

The display of the number of licenses is based on the object selected in the SIMATIC Manager (multiproject, project, SIMATIC station).

Requirement

The SIMATIC Manager is open.

Procedure

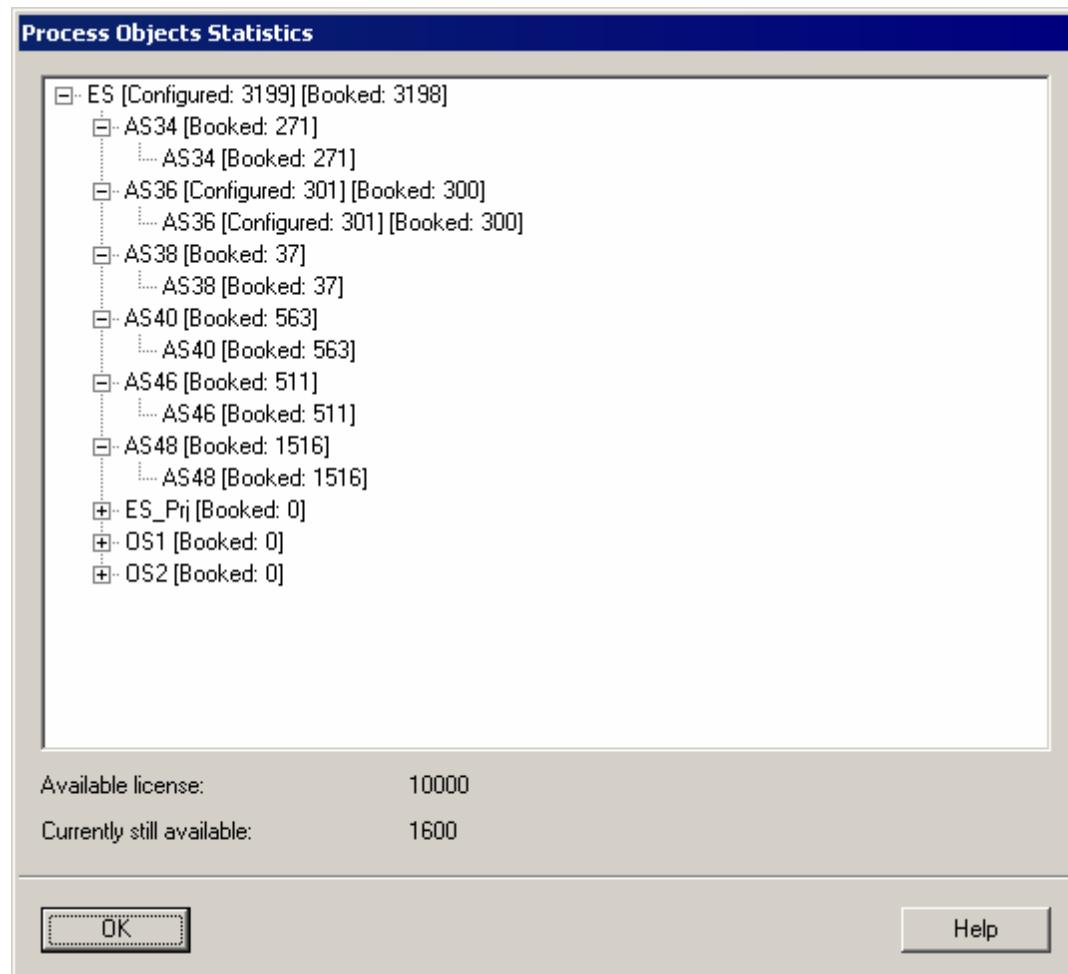

1. Select the multiproject in the component view.
2. Select the menu command Options > Charts > Process Objects Statistics.

The "Process Objects Statistics" dialog box opens.

Result

The "Process Objects Statistics" dialog box shows the number of configured process objects, the existing license, and the process objects which are currently still available for the following system areas:

- ? Multiproject
- ? Project
- ? SIMATIC station

Available license: 10000

Currently still available: 1600

OK

Help

AS License key for engineering

Relevant process objects in the project are process objects that can be monitored with the OS.

The license key for engineering provides the number of process objects that you can configure in the CFC as "process objects in the project".

Procedure

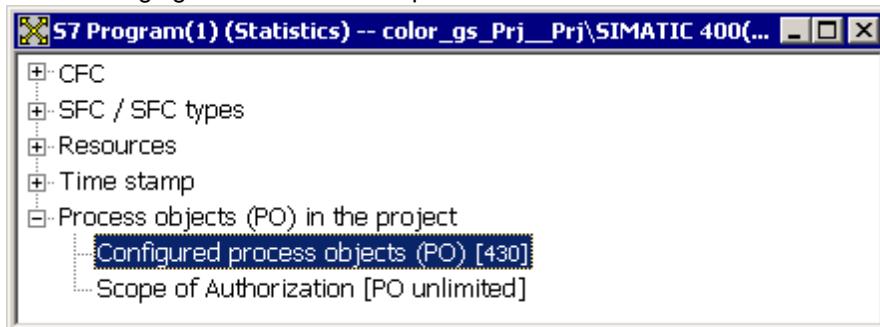

You can calculate the number of configured process objects as follows:

1. Open any chart in CFC.
2. Select the menu command Options > Chart Reference Data.
- The "Chart Reference Data" dialog box opens.
3. Select the menu command View > Statistics.

Result

You will find the number of "Process objects (PO) [x]" and the scale of the license key in the "process objects in the project" path.

The following figure shows an example.

1.21.11 Route Control

Calculating the routes for the route control station

License key for route control station

For the process mode of SIMATIC Route Control, the number of active routes (material transports) is relevant and not the number of configured routes. The number of routes active in process mode is based on the process.

| Long name | License name |
|----------------|---------------------------------------|
| SIFLA7RCS30700 | Route Control Server 300 simultaneous |
| SIFLA7RCS20700 | Route Control Server (100) |
| SIFLA7RCS10700 | Route Control Server 30 simultaneous |
| SIFLA7RCEN0700 | Route Control Engineering |
| SIFLA7RCCX0700 | Route Control Center |

Example: Route Control Server (300)

This is the license key for a route control server in which 300 routes can be simultaneously active in process mode.

Determining the route license

The status bar of the Route Control Center shows how many routes were active simultaneously after a restart of the route control server.

License key too small – server license key is installed

Note

If the route control server detects a license key for 30, 100 or 300 routes during startup, the maximum number of simultaneous material transports will be limited to this value.

If the server then receives a 31st, 101st or 301st route request, the Route Control Center reports that the license key is missing or that the limit has been exceeded.
The route control server continues to operate.

License key too small – server license key is not installed

If no license key is installed on the route control server, the server is limited to a maximum of 300 routes (maximum limit).

Since information about the actual size of the system is lacking on the route control server, it makes an estimate on the safe side - you can continue to operate the system even when there is no license.
The absence of a license is displayed in the Route Control Center.

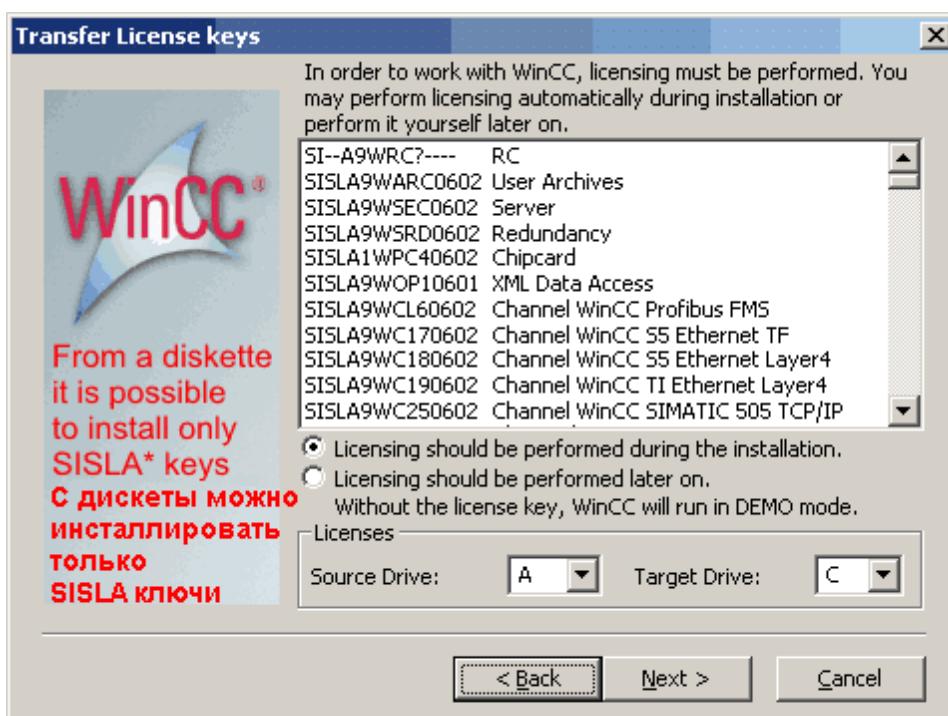

New license

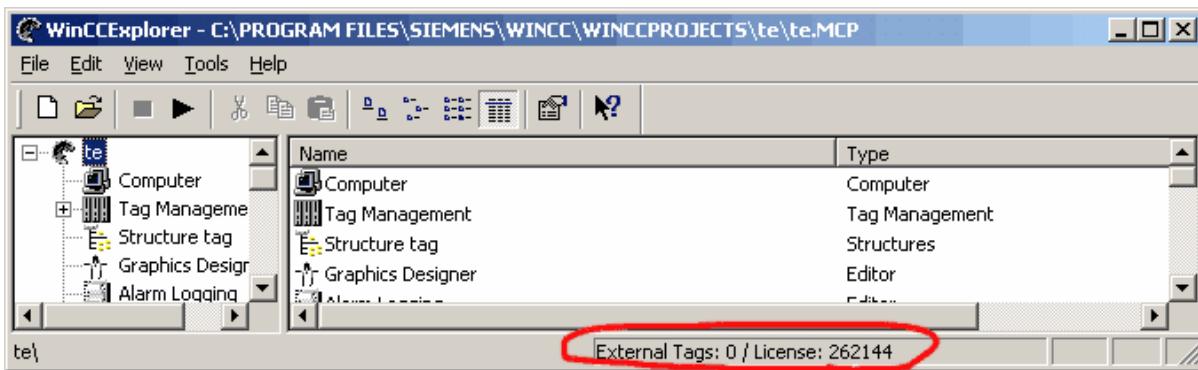

Restart the route control server after you have installed the license.

1.21.12 Problems with WinCC

For some programs (in particular WinCC and WebNavigator) from a diskette it is possible to install only SISLA keys.

On what that to reason SIFLA* keys are ignored at installation - their names are rigidly hammered in Setup.

See LogFiles in C:\Program Files\SIEMENS\WINCC\Diagnose

for example License.Log when License key A9WRC installed

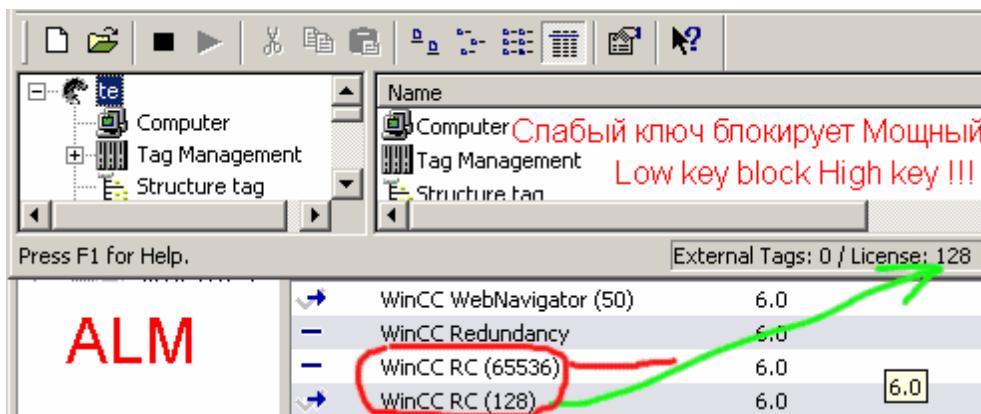

```

1.21.13 WinCC: the number of process objects

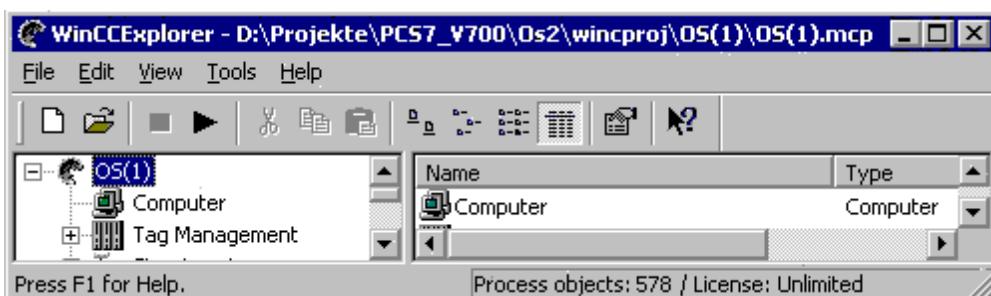

If you have executed the "Compile OS" function in SIMATIC Manager, you can determine the number of configured process objects in the WinCC Explorer:

Determining the number of process objects

1. Select the OS in the WinCC Explorer:

The number of configured process objects is displayed at the bottom right of the dialog box.

The screenshot below shows an example with "578 process objects".

Insufficient license key

If you open a project with an insufficient number of configurable process objects, the OS program switches to demo mode automatically.

If an RT/RC license key is present, the maximum number of configurable process objects is always permissible on a client, as the number of configurable process objects is only checked on a server.

| Long name | License name | Version |
|----------------|-------------------------|---------|
| SIFLA9WRC90700 | WinCC RT PO (unlimited) | v7.0 |
| SIFLA9WRC80700 | WinCC RT PO (20000) | v7.0 |
| SIFLA9WRC70700 | WinCC RT PO (10000) | v7.0 |

1.21.14 WinCC: the number of archive values

License key for archive values

This license key allows you to archive a defined number of archive values with the operator station.

The basic package is supplied with a license key for 512 archive values.

The license key required for archiving archive values in the OS project depends on the number of values configured for archiving.

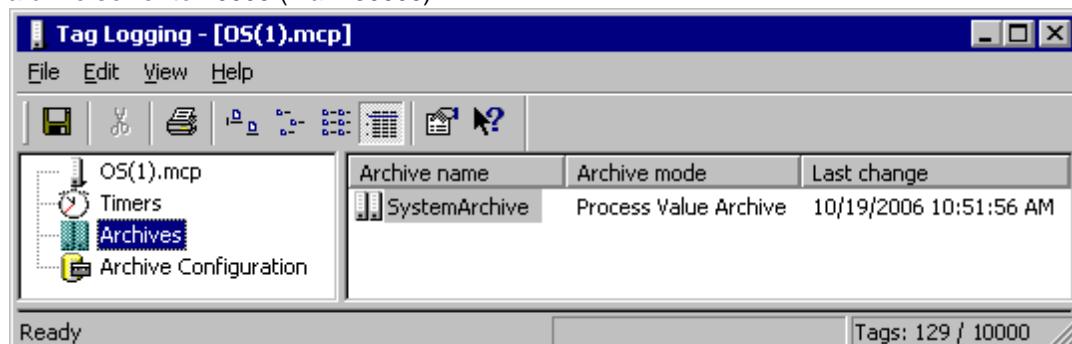

Open the "Tag Logging" editor in the WinCC Explorer.

The number of configured archive values is displayed at the bottom right of the dialog box.

The screenshot below shows an example with 129 of 10,000 authorized archive values.

Example: WINCC User Archives (10000)

This license key enables you to increase the number of archive values which can be configured for the archive server to 10000 (max. 30000)

Insufficient license key

If you open a project with an insufficient number of configurable process objects, the OS program switches to demo mode automatically.

If an RT/RC license key is present, the maximum number of configurable process objects is always permissible on a client, as the number of configurable process objects is only checked on a server.

| | Short name | Long name | License name | Version |
|-----|------------|-----------------|----------------------------|---------|
| 977 | A9WARC70 | SIFLA9WARC0700 | WINCC User Archives | v7.0 |
| 978 | Y9WTG670 | SIFCY9WTGX07006 | WINCC-V7 Arch 80000 ATg | v7.0 |
| 979 | Y9WTG570 | SIFCY9WTGX07005 | WINCC-V7 Arch 10000 ATg | v7.0 |
| 980 | Y9WTG470 | SIFCY9WTGX07004 | WINCC-V7 Arch 4G ATg UNLIM | v7.0 |
| 981 | Y9WTG370 | SIFCY9WTGX07003 | WINCC-V7 Arch 30000 ATg | v7.0 |

| | | | | |
|------|----------|-----------------|--------------------------|------|
| 982 | Y9WTG270 | SIFCY9WTGX07002 | WINCC-V7 Arch 5000 ATg | v7.0 |
| 983 | Y9WTG170 | SIFCY9WTGX07001 | WINCC-V7 Arch 1500 ATg | v7.0 |
| 1024 | Y9WTG770 | SIFCY9WTGX07007 | WINCC-V7 Arch 120000 ATg | v7.0 |

1.21.15 WinCC CAS

Calculating the process objects for the central archive server

The archive values of all OS servers in a PCS 7 plant are archived on a central archive server. The sum of the archive values of all OS servers gives the number of licensed archive values.

License keys for the central archive server

The following license keys are required for the central archive server:

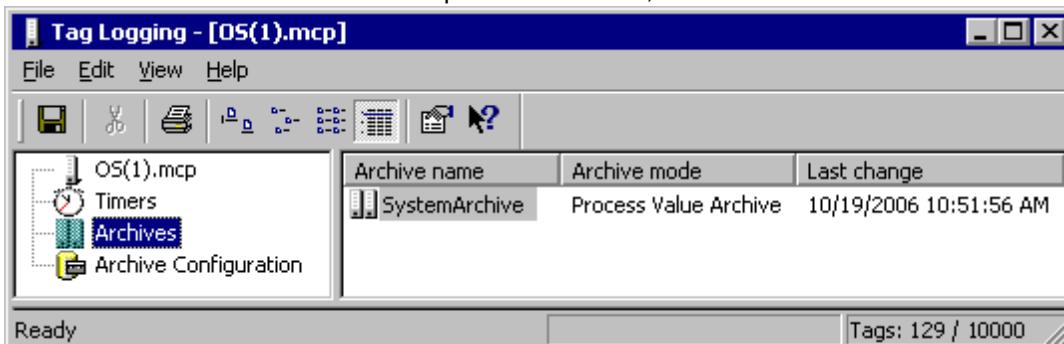

- ? License key for operating an OS client: SIFLA9WRP00602 WinCC RT PO Client ; SIFLA9WCP70700 WINCC-V7 RC PO (10000)
- ? License key for the "StoragePlus" software package: SIFLA1STOP0102 StoragePlus
- ? To use the central archive server: SIFLA9WSEC0700 WinCC Server
- ? To use the archives: SIFCY9WTGX07005 WINCC-V7 Arch 10000 ATg; SIFLA9WARC0700 WinCC Archive
- ? To view archived data: SIFLA9WVC20707 WinCC DataMonitor 10 Clients

Determining the number of archive values on an OS server

1. Open the "Tag Logging" editor in the WinCC Explorer.

The number of configured archive values is displayed at the bottom right of the dialog box.

The screenshot below shows an example with 129 of 10,000 authorized archive values.

2. Determine the number of archive values of all OS servers.

If redundant OS servers are used, the number of archive values must be doubled.

1.21.16 WinCC Maintenance station

Calculating the asset tags (hardware components) for the maintenance station

License key for WinCC Maintenance station

The license type of these license keys is "Count relevant license" SIFCYMAINR0700*.

| | Short name | Long name | License name | Version |
|-----|------------|----------------|---------------------------------|---------|
| 739 | MAINES70 | SIFLMAINES0700 | Maintenance ES V7.0 | v7.0 |
| 740 | YMAINR70 | SIFLYMAINR0700 | Maintenance RT V7.0 (unlimited) | v7.0 |

| | | | | |
|------|----------|---------------------|----------------------------|------|
| 741 | YMAINR71 | SIFCYMAINR0700 1 | Maintenance RT V7.0 (10) | v7.0 |
| 742 | YMAINR74 | SIFCYMAINR0700 4 | Maintenance RT V7.0 (100) | v7.0 |
| 1107 | YMAINR75 | SIFCYMAINR0700 5 | Maintenance RT V7.0 (250) | v7.0 |
| 767 | YMAINR76 | SIFCYMAINR0700 6 | Maintenance RT V7.0 (500) | v7.0 |
| 743 | YMAINR77 | SIFCYMAINR0700 7 | Maintenance RT V7.0 (1000) | v7.0 |

The licensed scope is added together when several license keys are installed.

? This license key allows you to monitor a defined number of diagnostic objects (asset tags).

Example: SIFCYMAINR07004 Maintenance RT (100)

This license key is sufficient for diagnosing up to 100 hardware components with a maintenance station.

If you have 3 Maintenance RT (100) license keys (**with difference serial numbers !**) on a maintenance station,

you will be able to diagnose up to 300 (100+100+100) hardware components.

| Status | License key | Product | Version | Standard l... | License type | License number | Validity |
|--------|-----------------|----------------------|---------|---------------|----------------|----------------------|----------|
| ✓ | SIFCYMAINR07004 | Maintenance RT (100) | 7.0 | Floating | Count relevant | 00401000002009004010 | 100 |
| ✓ | SIFCYMAINR07004 | Maintenance RT (100) | 7.0 | Floating | Count relevant | 00401000002009004011 | 100 |
| ✓ | SIFCYMAINR07004 | Maintenance RT (100) | 7.0 | Floating | Count relevant | 00401000002009004012 | 100 |

Components with diagnostics capability

The following components with diagnostics capability are classed as asset tags within a PCS 7 project:

- ? PC stations
- ? Network components with diagnostics capability (e.g., switches)
- ? Automation systems (CPU)
- ? Distributed I/O (ET 200 station)
- ? Field devices with diagnostics capability

Requirement

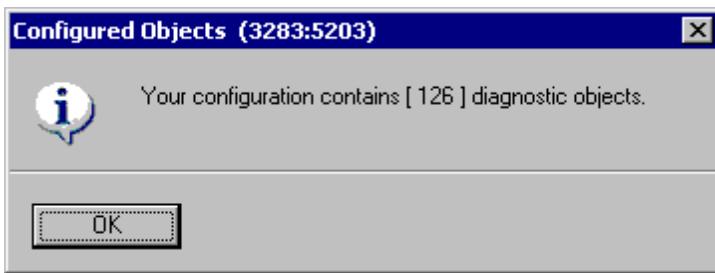

SIMATIC Manager is open.

Procedure

1. Select the multiproject in the plant view.
2. Select the menu command Options > Plant Hierarchy > Configured Objects.
The "Configured Objects" dialog box opens.

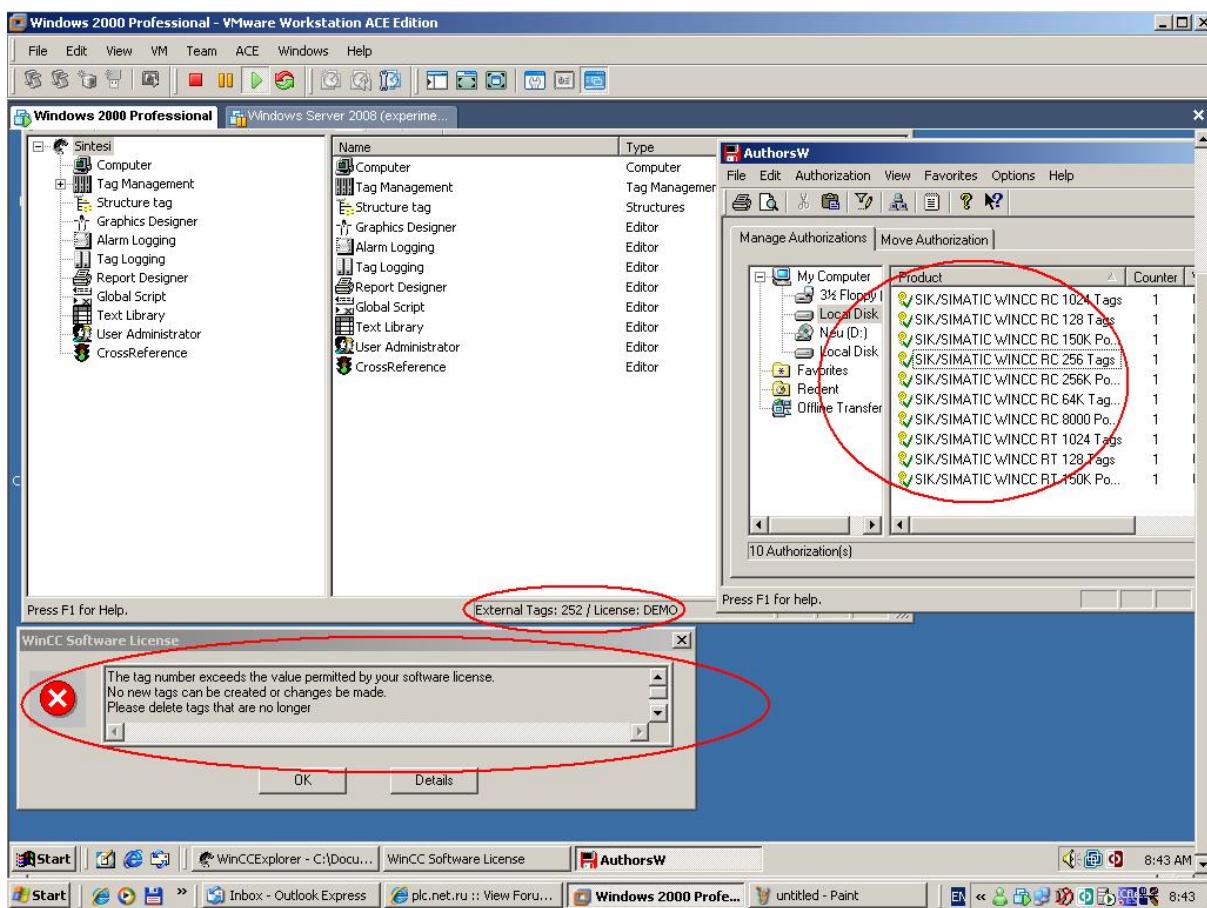

Result

The "Configured Objects" dialog box displays the number of configured diagnostic objects (asset tags).

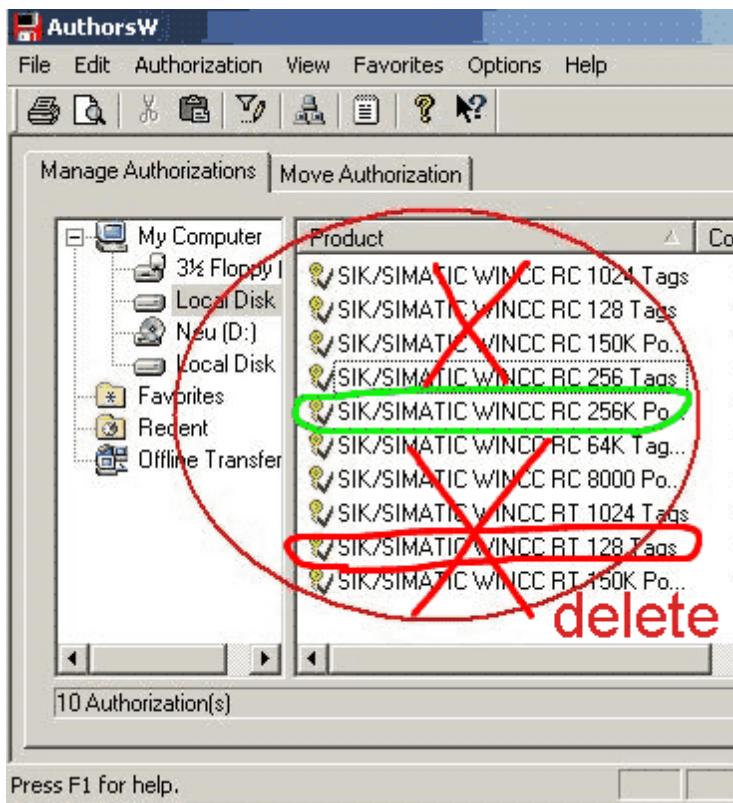

1.21.17 WinCC Demo mode

Q: I have all keys, but WinCC wrote "Demo mode"

You need install ONLY 1 RC key.

In this time only low 128 Tags key is worked - others keys is banned !!!

Q: Thank you, I did not know that. It works good now

1.21.18 Problems with WinCC Archive v6.2

New for Archive Licenses

For archive licenses, the new license type "Count-Relevant" is being introduced starting with WinCC V6.2. It enables a much finer stacking of the licenses.

If, for example, a WinCC project uses a license for 1500 archive tags as well as a license for 5000 archive tags, then a total of 6500 archive tags are available on this computer.

On the other hand, the 512 free archive tags included in the delivery scope of the basic packages are not added up.

For using more 512 Archive Tags is required SIFCY9WTGX0600*
WinCC Archive v6.2

| Select> | Short name | Long name | License name | Version |
|---------|------------|-----------------|----------------------------|---------|
| 622 | A9WARC62 | SIFLA9WARC0602 | WINCC User Archives | v6.2 |
| 623 | Y9WTG662 | SIFCY9WTGX06026 | WINCC-V6 Arch 80000 ATg | v6.2 |
| 624 | Y9WTG562 | SIFCY9WTGX06025 | WINCC-V6 Arch 10000 ATg | v6.2 |
| 625 | Y9WTG462 | SIFCY9WTGX06024 | WINCC-V6 Arch 4G ATg UNLIM | v6.2 |
| 626 | Y9WTG362 | SIFCY9WTGX06023 | WINCC-V6 Arch 30000 ATg | v6.2 |

| | | | | |
|-----|----------|-----------------|------------------------|------|
| 627 | Y9WTG262 | SIFCY9WTGX06022 | WINCC-V6 Arch 5000 ATg | v6.2 |
|-----|----------|-----------------|------------------------|------|

1.21.19 I need SIUPA9WRC5--3 POWERPACK (upgrade) KEY ?

I need SIUPA9WRC5...3 UPGRADE WinCC runtime +conf. 1024-8k powerpack license key

No need wait SIUP* key.

I don't support Upgrade keys - in it there is no necessity.

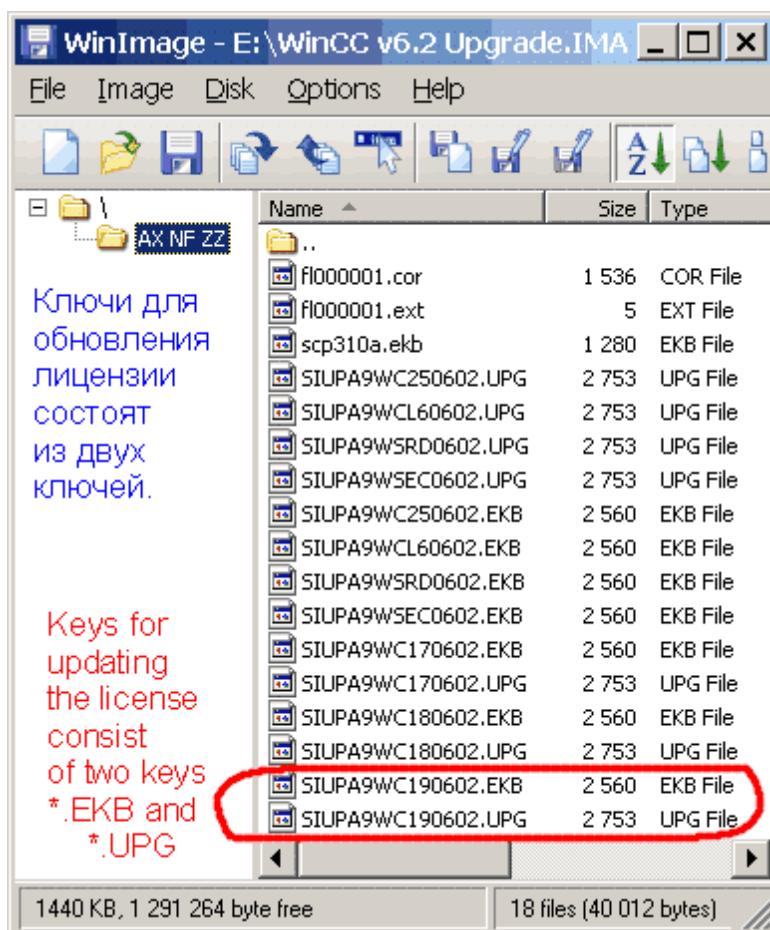

Install on SIFLA9WRC7060*.EKB WINCC-V6 RC 256K PTg 512 ATg

You can install normal long key SIFLA9WRC60*00.EKB (max 256K) from YELLOW FLASH or Yellow Disk SIFLA9WRC60*00.IMA

Do not forget remove old key on smaller number of tags - differently it can to not give access to more powerful key.

Keys for updating the license consist of two keys *.EKB and *.UPG.

Example of a diskette for updating the version of the program.

1.21.20 Program required key after installation of key

Before first start of SmartLabel need check installed key in ALM.
This is bug of SmartLabel and other Simatic programs.

1.21.21 About EKBackup CRC Error

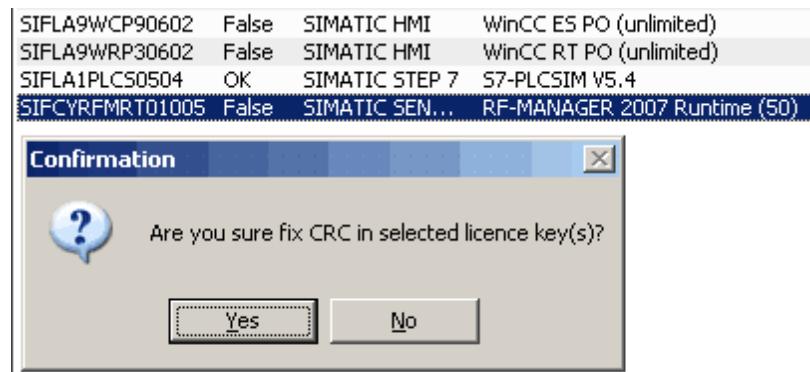

About EKBackup CRC Error

This EKBackup option is false - EKB_Install key haven't CRC error

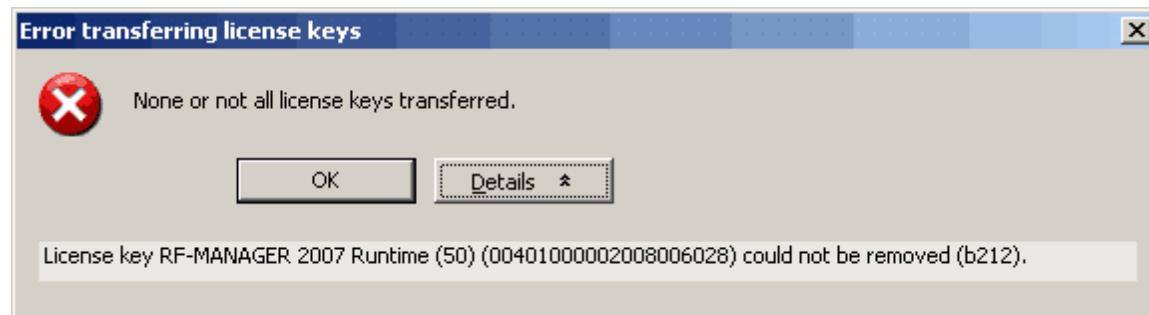

This EKBackup version also have "Fix CRC" ERROR

After this "Fix" I can't move "fixed" key to other disc.

EKBackup 1.0.1.38

ALM wrote after fix

ALM show result after moving "fixed" keys - all moved keys inactive

| Status | License key | Product |
|--------|-----------------|------------------------------|
| --- | SIFCYRFMRT01005 | RF-MANAGER 2007 Runtime (50) |
| --- | SIFLA9WCP90602 | WinCC ES PO (unlimited) |
| --- | SIFLA9WRP30602 | WinCC RT PO (unlimited) |

Other Key programs (based on Fubrus souce) also haves this bug

for example this

Les années lointaines le Siemens a confié l'élaboration de la protection pour les produits de programme à la société StopCopy. Celle-ci a élaboré la protection à la base des fichiers clés installés sur les disquettes spéciales Jaunes - d'ici et le nom.

De plus, il affirmait que la protection jusqu'à celui-ci est si sûre que "protégera de façon certaine vos investissements".

Un grand merci humain aux spécialistes StopCopy pour le travail fait dans le domaine de la création de l'atmosphère de l'accès des produits du Siemens aux grands publics des programmeurs. Cela a fait les distinctions de programme et de matériel très populaire et réputé dans le monde entier qu'il a permis dignement de rivaliser avec d'autres producteurs de l'automatique même sur leur territoire.

Prendre pour l'exemple des USA avec eux B&R et General Electric... Et en conséquence a parvenu effectivement les investissements mis. En effet, il faut acheter le fer tout de même au Siemens.

Le programme donne est destiné pour l'installation des clés des licences dans le cas où :

"Le jour noir du programmeur" est arrivé - le système a volé avec toutes les licences, mais travailler il faut, même dans les régions peu accessibles;

Quand est sorti un nouveau produit chaud, mais l'argent pour lui les autorités jusqu'à ce que donnent; Veux étudier simplement pour le développement total.

Est-il laborieux en raison de l'mission de la version ALM 3.0 - le Manager Litsenzy, après qui, les clés soi-disantes "vite copiées" longues de la licence ont cessé de travailler à cause de leur ignorance comme ce Manager Litsenzy.

On pouvait simplement copier les clés "vite copiées" au catalogue des licences C:\AX NF ZZ. Ils utilisaient de service l'"entrée" dans le système de la licence ALM <v3.0, qui était couverte avec la sortie Step7 v5.4 SP1.

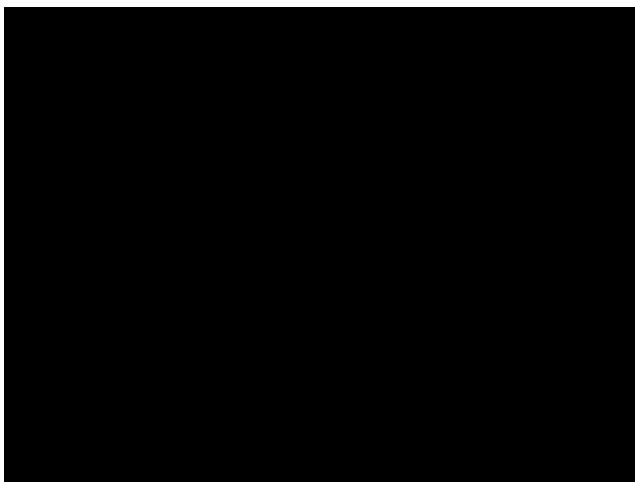

On aussi appliquait le codage supplémentaire des clés, c'est pourquoi de nouvelles clés ne sont pas visibles ALM v2.2.

De nouvelles clés se reflètent incorrectement dans de vieilles versions des programmes EKB_Rename, EKB_Backup et dans EKB_Install <v.2007.03.03.

Je n'appelle pas utiliser les programmes du Siemens dans les buts intéressants. Les programmes pour les buts industriels doivent être mis en principe aux devis des projets et être acquis pour l'argent du client.

Peu qui viendra la faire livrer au client gauche 7 avec de gauches clés et sans certificat pour une grande production.

Mais pour l'utilisation domestique probablement est absent rien plus mal de remuer-ménage avec les disquettes de licence. Les cas, quand la licence surmonte de firme Jaune commence à bouler chez l'étranger avec la perte des clés dans le terrain lointain sans téléphone et Internet arrivaient.

3.1 IntroductionF

Dans la fen tre du programme sont dispos s :

L'arbre avec la liste des programmes et le tableau avec la liste des cl s

Paul pour la conclusion des commentaires et l'information r f rentielle

La ligne du choix de la langue de l'interface

La ligne du choix du disque pour l'installation des cl s et le bouton de la r novation de la liste des disques

Les lignes de l'introduction des num ros par lots

La ligne et le bouton pour la recherche de la cl selon le mot donn

Le bouton de l'appel de la fen tre pour le travail avec les images des disquettes Jaunes

Paul du choix des pr f rences comme la licence l'installation

Les boutons de l'installation court, long ou toutes les cl s choisies

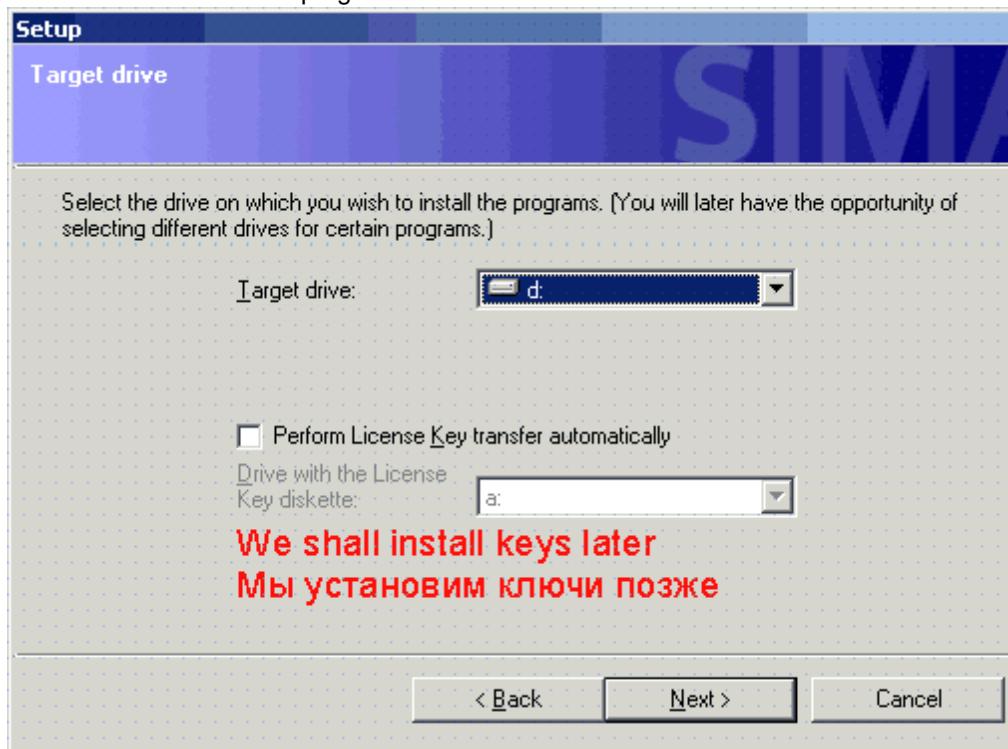

The screenshot shows the Siemens Key Installer application window. The left sidebar displays a tree view of installed programs, including Electronic Signature, IEA, iMap, Information Server, F System, FuzzyControl++, Graph, HiGraph, Logon Service, Maintenance, Management Agent, MicroComputing, Motor Starter ES 2007, Modular Safety System ES, MP ThinClient, .NET, OPC, and PCS7. Under PCS7, there are sub-options for PCS7 v9.0, including PCS7 v9.0 optimal, ES Single Station, ES SMART Station, Information Server, OS Single Station, OS Server, Partner License, PowerControl, Promoter Package, and Process Historian.

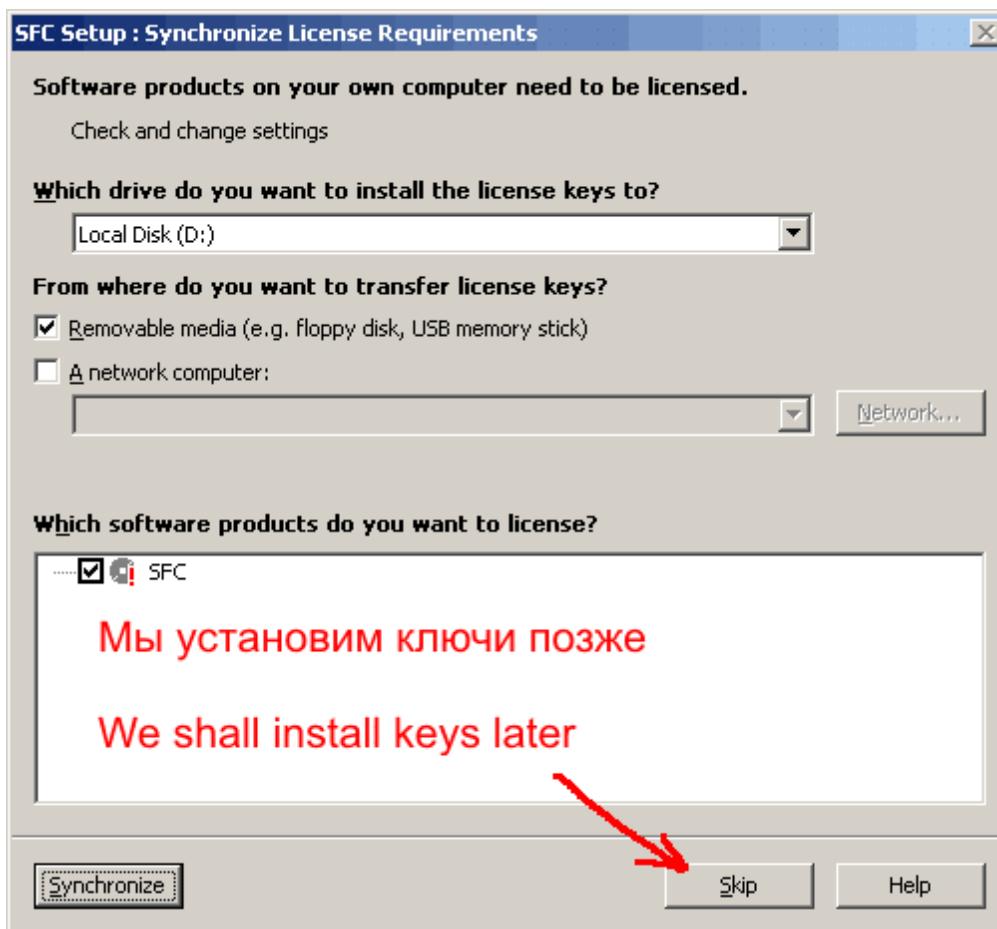

The main table lists 2733 total keys, with 153 installed. The columns include Serial number, Short name, Long name, License name, and a status column with checkboxes. A specific row for 'SIFCYA7RCR99992' is highlighted in blue. The right side of the interface includes a language selection dropdown (English, Russian, French, Spanish, Italian, Portuguese, Chinese), a 'Find key' search bar, and sections for selecting license types (Float in the network, Single work place, Rental), preferred key types (Long keys, Short keys, All keys), and a 'Normal or FastCopy key' option. At the bottom right is a 'AUTOMATION LICENSE MANAGER' button.

| Serial number | Short name | Long name | License name |
|---------------|------------|-----------------|--|
| 626 | | SIFCY9WTGX06023 | WINCC-V6 Arch 30000 ATg |
| 1859 | | SIFLWCWN069999 | WinCC WebNavigator (150) for RT Professional |
| 1982 | | SIFCYWUXMN99994 | WinCC WebUX Monitor (50) |
| 1987 | | SIFCYWUXOP99994 | WinCC WebUX Operate (50) |

3.2 Nous tablirons les clés plus tard

Pendant l'installation des programmes Simatic nous refusons l'installation des clés.

3.3 Type de licence

Type de licence

- Sans restriction (illimité)
- Count relevant (jour/s)
- Rental (limitation en heures, limitation en jours, date d'expiration)
- Trial (limitation en jours)
- Pay-per-use
- Demo (limitation en heures, limitation en jours, date d'expiration)
- Contract
- Upgrade
- Power Pack

Validit

- Sans restriction (Unlimited) : illimit e
- Count relevant : nombre de jours
- Rental : dur e restante + unit / date
- Trial : temps restant (dur e d'ex cution totale)
- Pay-per-use : selon contrat
- Demo : dur e restante + unit / date
- Contract : selon contrat
- Upgrade : selon contrat
- Power Pack : selon contrat

3.4 Num ro de licence

Num ro de s rie de la licence logicielle
 (10 chiffres = autorisation, 20 chiffres = cl de licence)

| | | |
|---------------|------------|----------------------|
| Serial number | 0420061231 | 00401000002006012031 |
|---------------|------------|----------------------|

Vous pouvez ne pas changer ces num ros, mais accorder cela faire au programme
 Ou pouvez choisir un des num ros de la liste des num ros des cl s tablies sur votre ordinateur.

| | |
|---------------|------------|
| Serial number | 0420070112 |
| | 0123456789 |
| | 0420061227 |
| | 0420061228 |
| | 0420070112 |

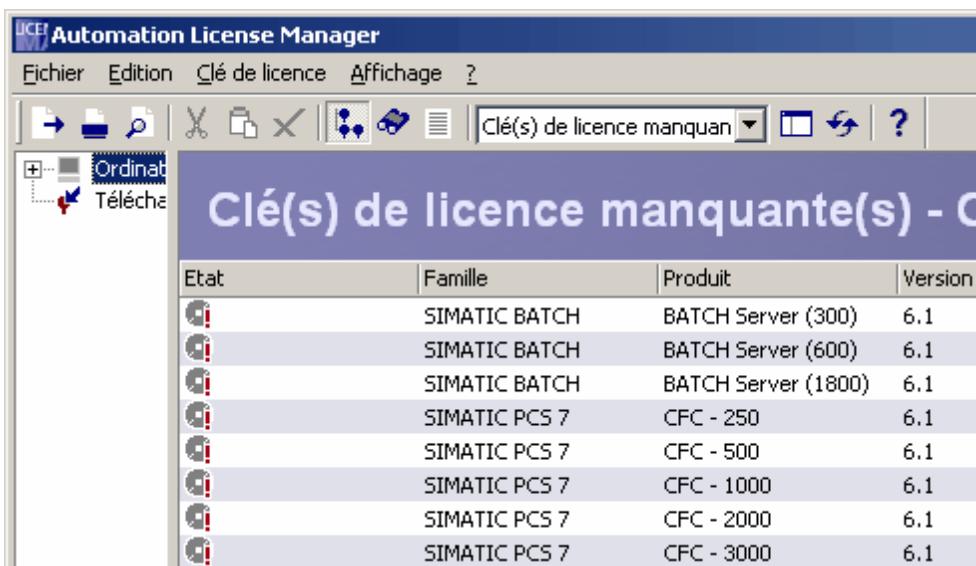

3.5 Required keys

La liste des cl s n cessaires aux programmes tablis.

Des cl s tagues tablissez seulement un avec la quantit n cessaire est tag
 (l'exemple pour CFC sur le dessin)

Vous pouvez pr ciser les noms des cl s manquant dans le manager des licences ALM

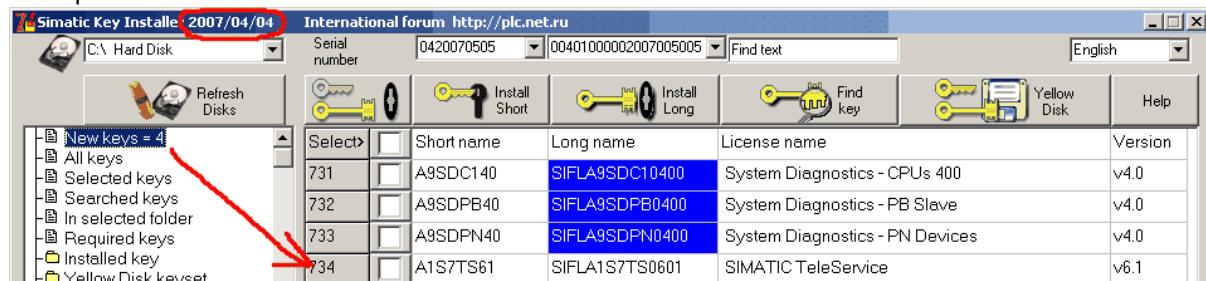

La clé complexe S7PROF* pour la version professionnelle STEP7 peut être utilisée au lieu de 4 clés particulières A17104*, A1PLC_*, A1S7GR*, A1SCL_*.

La clé PCS7TT* pour le programme PCS7 peut être utilisée au lieu de l'entier de l'assortiment des clés. Vous pouvez préciser les noms des clés manquantes supplémentaires dans le manager des licences ALM.

3.6 Unknow keys

Example

3.7 desactiver la Trial Licence

Comment désactiver la Trial Licence, lorsque le message indiquant que la Trial Licence est périmée apparaît, bien que la Floating Licence a été installée?

<http://support.automation.siemens.com/WW/view/en/24200966>

Instructions:

La Trial Licence est faite pour une utilisation temporairement limitée du logiciel SIMATIC par exemple pour des tests et après l'activation, elle est valable pour au maximum 14 jours. Si après l'écoulement de ce temps, vous installez une licence pour une utilisation illimitée (licence Single, Floating ou Upgrade) et que après l'installation vous obtenez tout de même le message que la licence Trial est périmée, nous vous recommandons d'effacer la licence Trial dans le répertoire "AX NF ZZ":

Procédure pour effacer une licence Trial:

1. Ouvrez l'ALM dans MS Windows par :

- "Démarrer > SIMATIC > License Management > Automation License Manager"

et marquez avec le curseur le lecteur (par ex. "C"), sur lequel vos licences sont installées. Dans la fenêtre de droite de Automation License Manager apparaît alors le tableau avec les licences installées. Vous avez besoin dans la vue, du nom de fichier (clé de licence) et des 20 chiffres du numéro de licence. Si ces colonnes étaient encore masquées, alors ouvrez par

- "Affichage > Définir..."

le dialogue "Définir la vue". Sélectionnez dans la partie basse de ce dialogue dans l'onglet "Colonnes" la "Clé de licence" et "N° de licence".

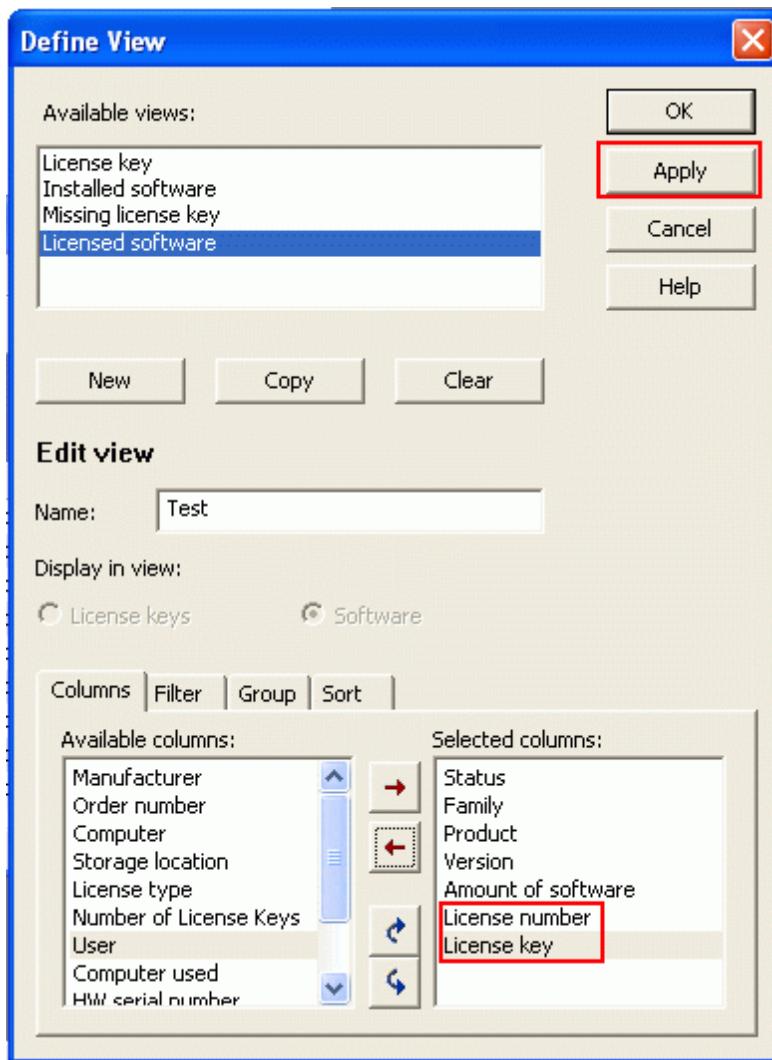

Image 01

Entrez ensuite un nom sous "Editer la vue:" et cliquez sur le bouton "Appliquer". Après la validation avec OK, les colonnes "Clé de licence" et "N° de licence" apparaissent dans Automation License Manager.

2

Marquez dans l'explorateur Windows, le répertoire "AX NF ZZ" sur votre disque dur ou dans le lecteur "C", afin de faire apparaître dans la fenêtre de droite de l'explorateur, le nom des fichiers des licences.

Si le répertoire "AX NF ZZ" ou les fichiers de répertoire ne sont pas visibles, alors ouvrez le dialogue "Outils > Options des dossiers.." et sélectionnez l'onglet "Affichage":

- désactivez ici l'option "Masquer les fichiers protégés du système d'exploitation"

(recommandé)" et

- activez l'option "Afficher tous les fichiers et dossiers".

Cliquez ensuite sur le bouton "Appliquer" et validez avec OK.

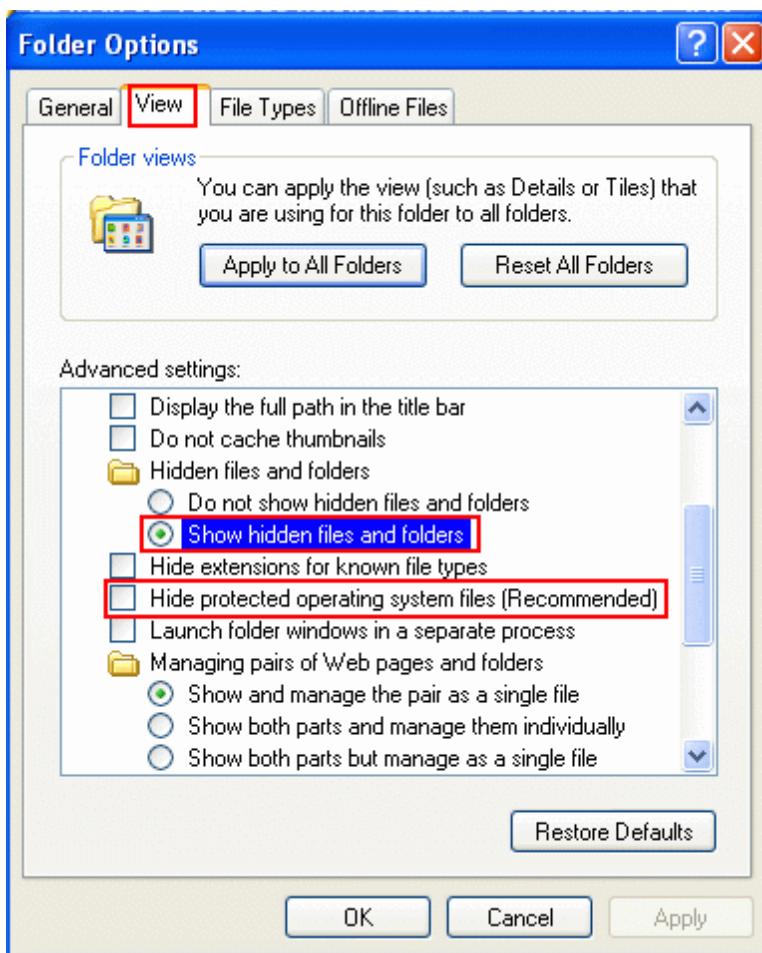

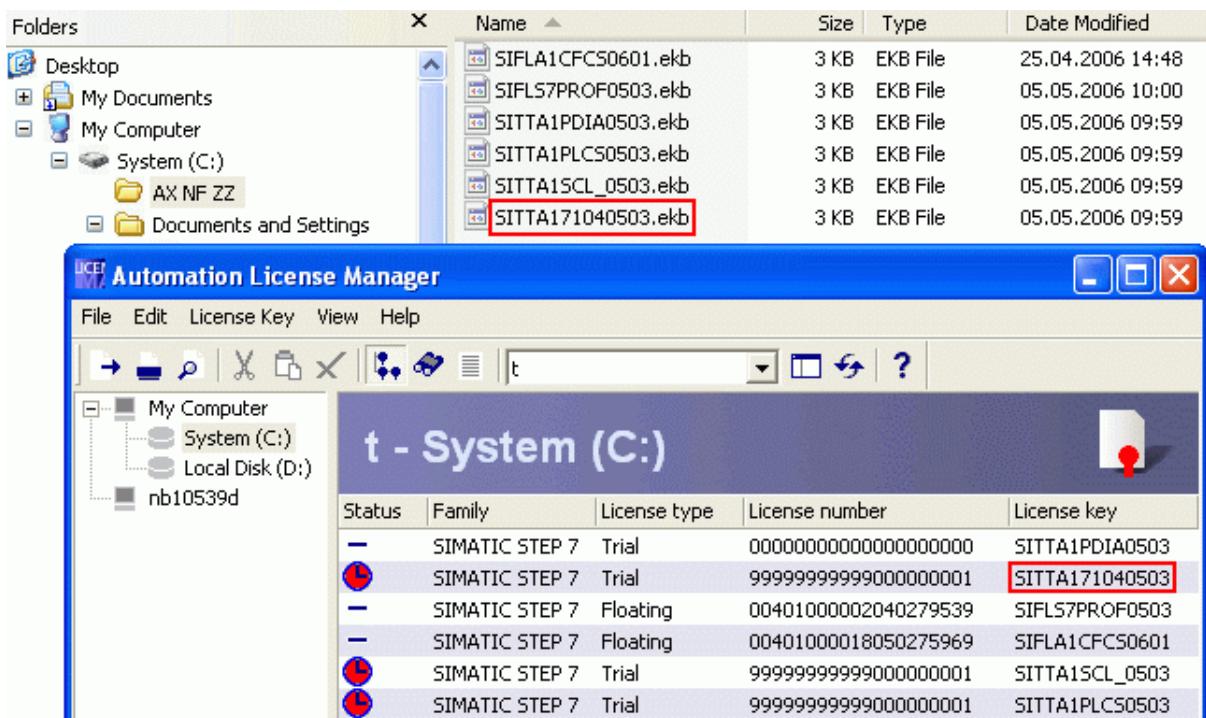

Image 02

Le répertoire "AX NF ZZ" sera alors affiché dans l'explorateur Windows.

3 Comparez maintenant dans Automation License Manager, le nom de fichier (Clé de licence) de la licence Trial avec le nom de fichier dans le répertoire "AX NF ZZ". Sur la vue affichée dans Automation License Manager déterminez le nom de fichier de la licence Trial à effacer (image 03), que vous retrouverez alors dans le répertoire "AX NF ZZ".

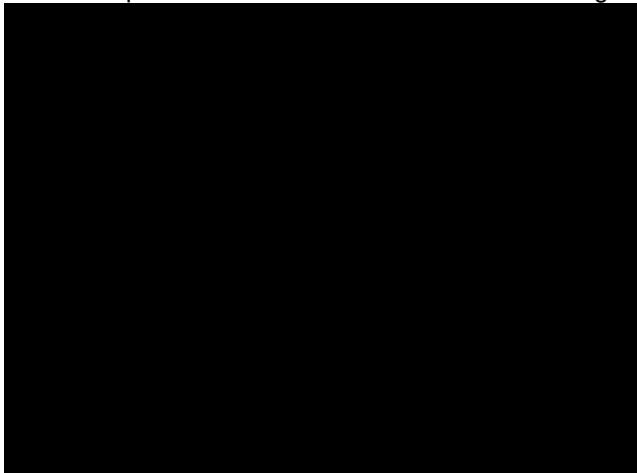

4 Marquez la licence Trial trouvée dans le répertoire "AX NF ZZ" et cliquez sur le bouton droit de souris. Cliquez ns le menu contextuel suivant sur "Effacer". Après l'effacement, le message indiqué plus haut n'apparaît plus.

3.7.1 Install Trial keys

Pendant l'installation de la clé temporaire dans les catalogues **Windows** et **Windows\System32** il y a des catalogues *attis avec un fichier vide.

La clé temporaire **SITTA*.ekb** est tablie au catalogue **C:\AX NF ZZ**

See Remove Trial keys

3.7.2 Remove Trial keys

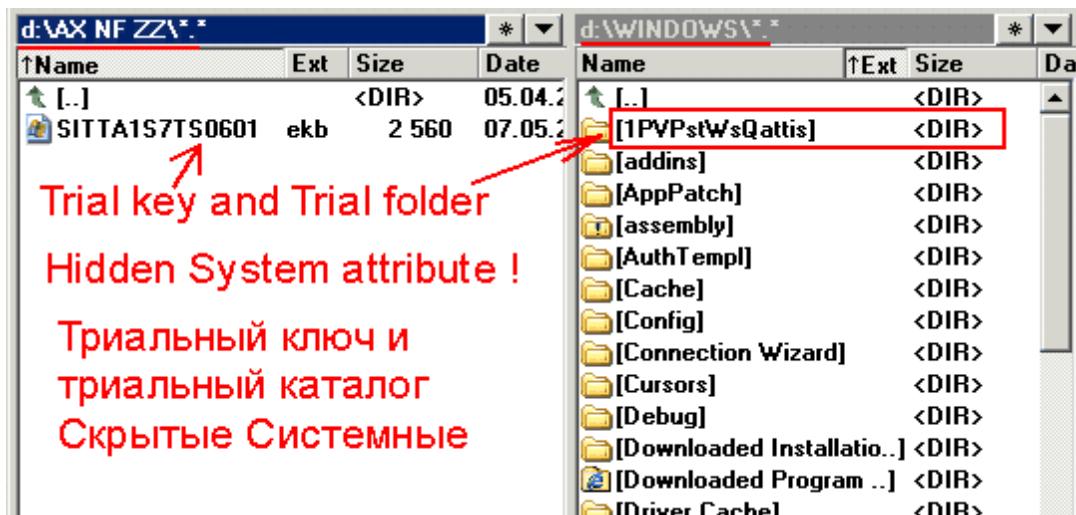

Pour certains programmes on peut établir les clés temporaires pour un délai de quelques heures annexe du travail.

Après l'achèvement du travail il faut enlever les clés temporaires et leurs traces.

Dans le cas contraire les problèmes sont possibles au fonctionnement des clés normales.

Il faut enlever aussi le catalogue au catalogue Windows et Windows\System32

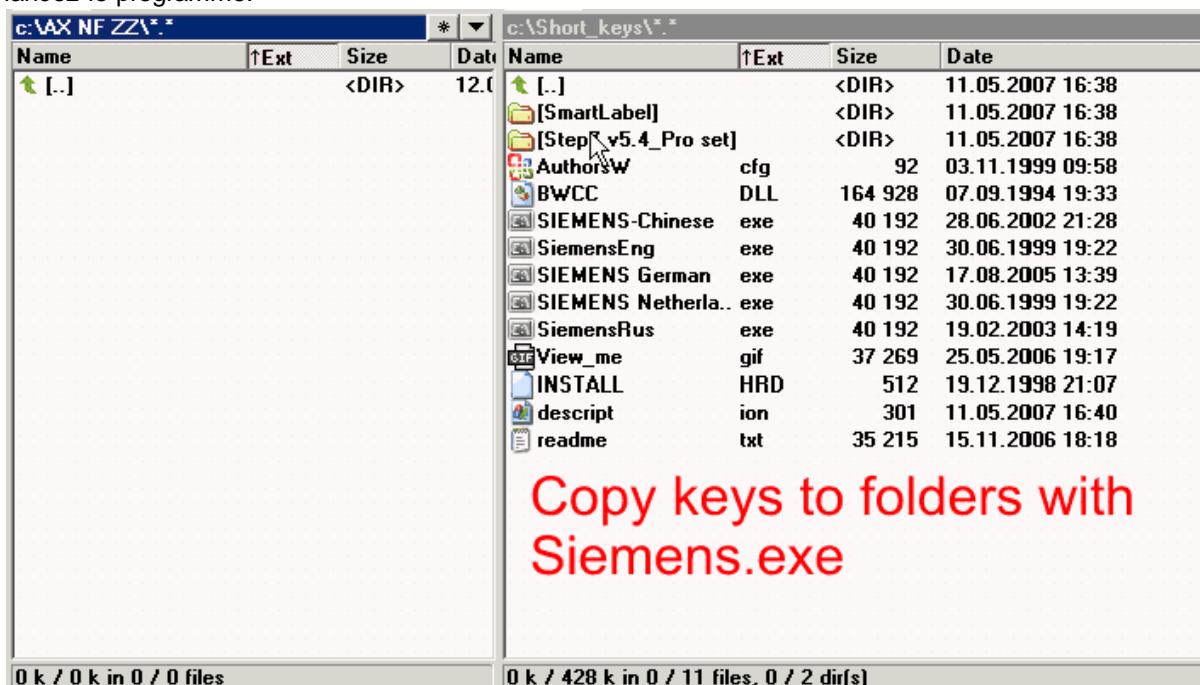

Dans ce catalogue il y a un fichier vide.

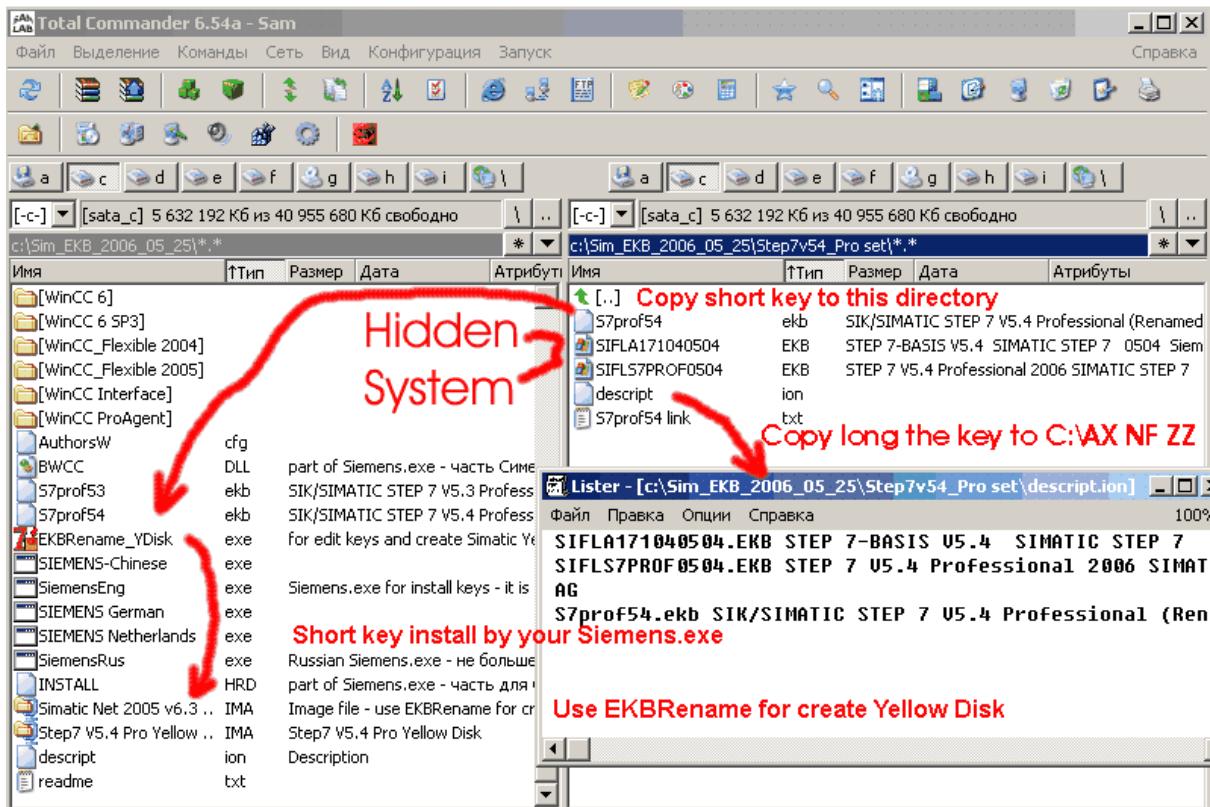

3.8 Siemens.exe

Pour l'installation des clés courtes de la composition on peut utiliser le programme Siemens.exe.

Copiez au catalogue avec le programme les clés demandées (pas plus 100 clés exceptionnellement) et lancez le programme.

Si dans le catalogue avec Siemens_exe il n'y a pas de clés, la mise en marche on déduit{retire} le message suivant

3.9 transferring a license key to a PC without floppy disk drive

Quelles sont les options possibles pour transférer les clés de licences sur un PC sans lecteur de disquette ?

Conseil de Configuration :

A compter de maintenant sur la plupart des PC maintenant , les PC ne sont plus équipés de base avec des lecteurs de disquettes . Cependant , pour installer certains produits de logiciel d'automatisme il vous sera nécessaire d'utiliser un lecteur de disquette pour installer les clés de licence qui se trouvent obligatoirement sur disquette.

Avec l'Automation License Manager vous pouvez installer les licences sur un PC sans devoir disposer d'un lecteur de disquettes mais avec les médiums selon de tableau ci-dessous :

| | Type de clé de Licence | |
|--|---|--|
| Médium pour le Transport | Autorisation (par exemple STEP 7 V5.2) | Clé de Licence (par exemple Floating License Key STEP 7 V5.3) |
| Lecteur de disquette externe avec interface USB | X | X |
| Clé USB en tant que média pour transporter d'un PC équipé d'un lecteur de disquette vers un autre sans lecteur de disquette . | -- | X |
| PC équipé d'un lecteur de disquette et qui sera partagé à travers le réseau . | X ¹⁾ | X ¹⁾ |
| Second PC équipé d'un lecteur de disquette et un transfert Offline (vous reporter à l'aide en ligne de l'Automation License Managers) | X ¹⁾ | X ¹⁾ |

¹⁾ L'Automation License Manager doit aussi être installé sur l'autre PC .

Note:
Vous pouvez reconnaître une clé de licence à partir de l'Automation License Manager au fait que le numéro de licence soit constituée de vingt chiffres
Une Autorisation possède comme numéro de licence 10 chiffres seulement.

4.8 disattivare la Trial License

Come si può disattivare la Trial License, se compare la segnalazione che la Trial License è terminata, nonostante sia stata installata la Floating License?

<http://support.automation.siemens.com/WW/view/en/24200966>

Istruzioni

La Trial License serve per l'utilizzo limitato nel tempo del software SIMATIC p. es. per test e dopo l'attivazione, questa licenza è valida per max. 14 giorni. Se dopo che questo tempo è trascorso, si installa una licenza per l'utilizzo illimitato nel tempo (Single, Floating opp. Upgrade License) e dopo l'installazione si riceve la segnalazione che la Trial License è scaduta, si raccomanda di cancellare la Trial License nella cartella "AX NF ZZ".

modo di procedere per la cancellazione di una Trial License

1. Aprire in MS Windows lo ALM tramite

- "Start > SIMATIC > License Management > Automation License Manager"

e selezionare con il cursore il drive (p. es. "C"), su cui sono installate le licenze. Nella finestra di destra dello Automation License Manager compare poi la tabella con le licenze installate. Per la visualizzazione delle licenze servono i nomi dei file (License Key) e il numero di licenza a 20 posizioni. Se queste colonne non dovessero essere ancora visualizzate, allora tramite

- "Vista > Definizione..."

aprire il dialogo "Definisci vista". Scegliere nella parte inferiore di questo dialogo nel registro "Colonne" la "License Key" ed il "License number".

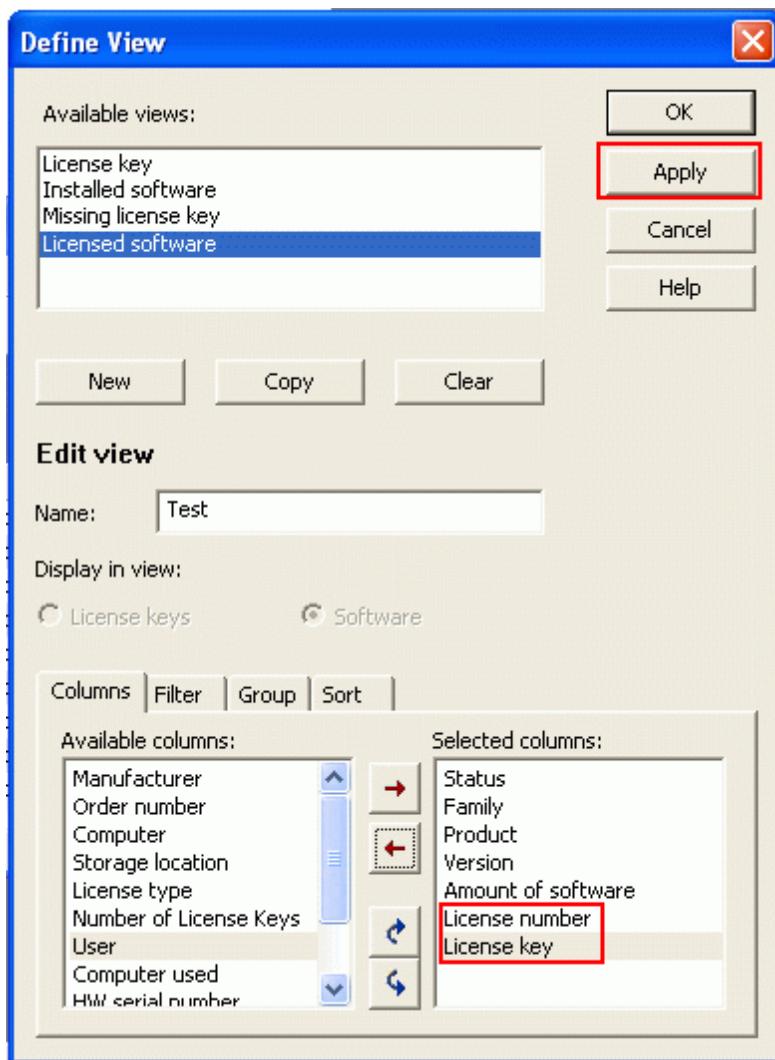

Figura 01

Registrare poi un nome sotto "Elabora vista:" fare clic sul pulsante "Applica". Dopo la conferma con OK compaiono le colonne "License Key" e "License number" nello Automation License Manager.

2

Selezionare nell'Explorer la directory "AX NF ZZ" sul disco opp. nel drive "C", in modo che nella finestra di destra della Explorer compaiano i nomi di file delle licenze.

Se la directory "AX NF ZZ" opp. i file in questa directory non dovessero essere visibili, aprire il dialogo "Strumenti > Opzioni cartella..." e scegliere il registro "Visualizza":

- disattivare l'opzione "Nascondi i file protetti di sistema (raccomandato)" e
- attivare l'opzione "Visualizza tutti i file e cartelle".

Fare poi clic sul pulsante "Applica" e confermare con OK.

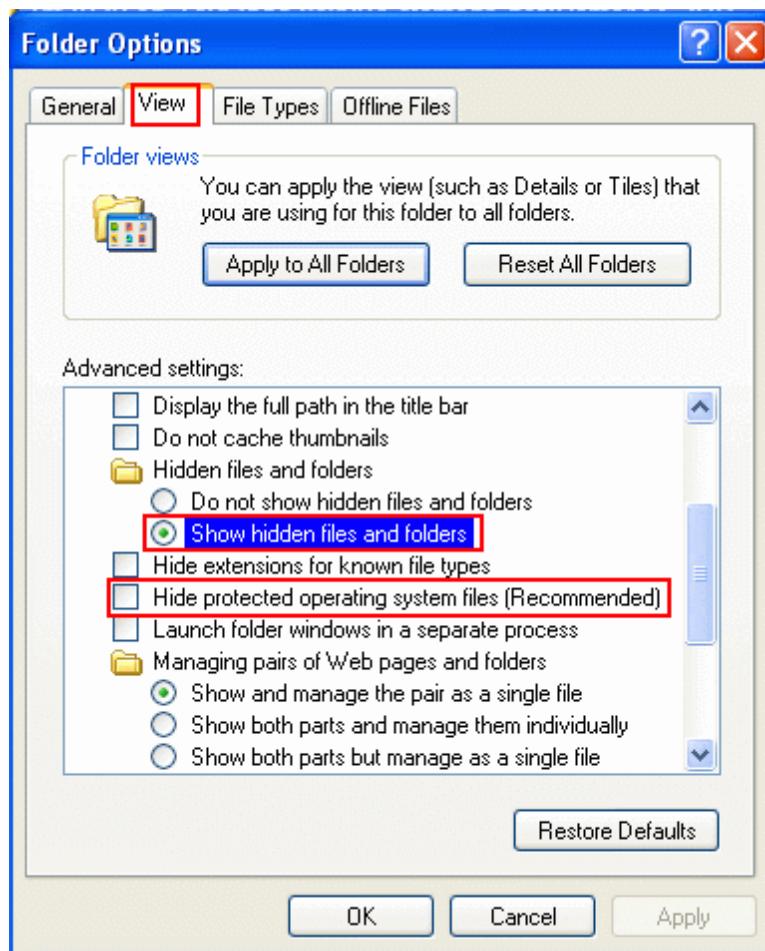

Figura 02

La directory "AX NF ZZ" viene poi visualizzata in Explorer.

3

Confrontare ora nell'Automation License Manager i nomi dei file (License Key) della Trial License con i nomi dei file nella cartella "AX NF ZZ". Tramite la visualizzazione impostata nello Automation License Manager si rilevano per la Trial License da cancellare i nomi di file (Figura 03), che si trovano poi nella cartella "AX NF ZZ".

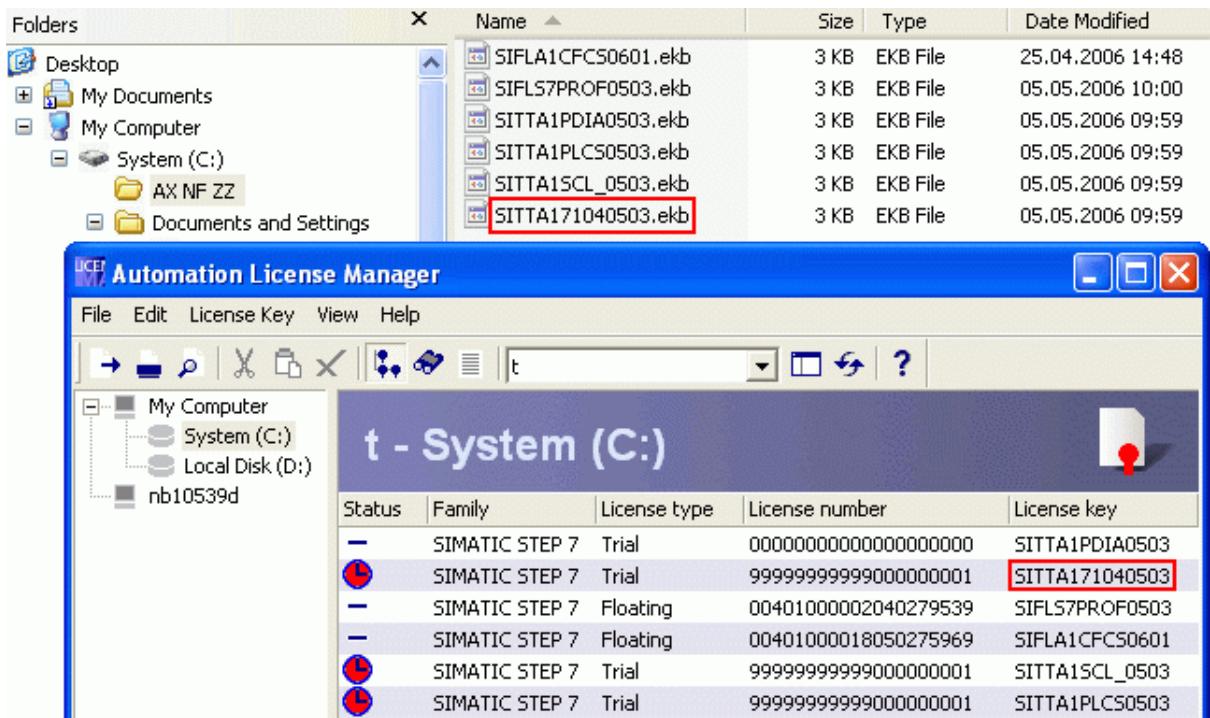

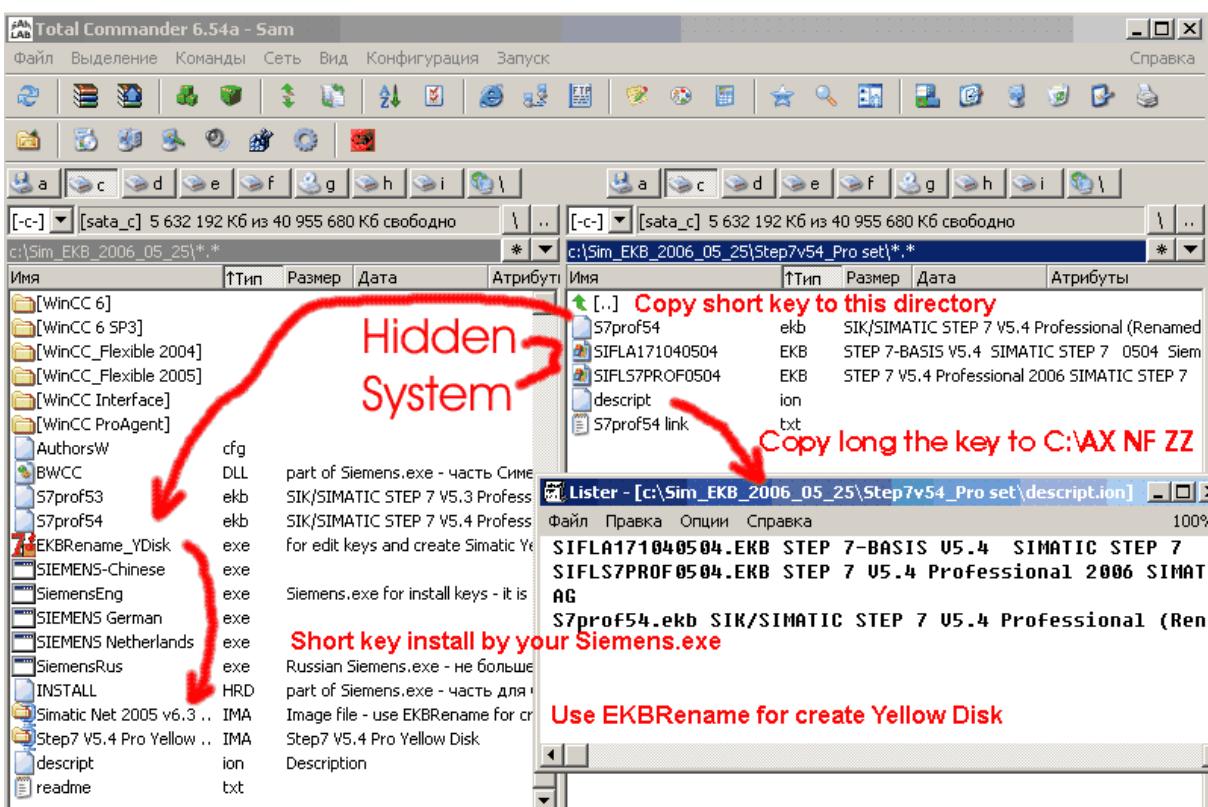

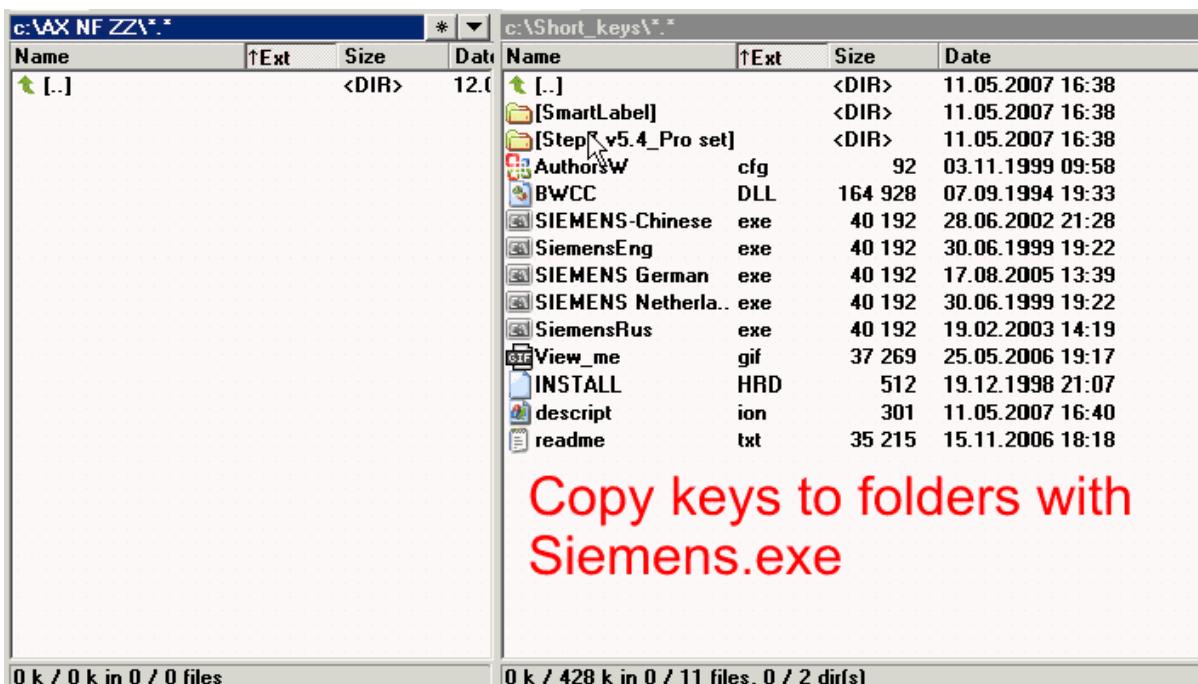

Figura 03

4

Selezionare la Trial License trovata nella directory "AX NF ZZ" e fare clic con il tasto destro del mouse. Nel menù contestuale che compare fare poi clic su "Cancella". Dopo la cancellazione la segnalazione sopra descritta non dovrebbe più comparire.

4.9 Siemens.exe

For installation of short keys from a set it is possible to use program Siemens.exe.
Copy in the catalogue with the program demanded keys (no more than 100 keys lumpsum) and start the program.

If in the catalogue with Siemens_exe there are no keys at start the following message will be show.

4.10 trasferire la chiave di licenza su una PC senza drive per dischetti

Quali possibilità ci sono di trasferire la chiave di licenza su una PC senza drive per dischetti?

Avvertenze di configurazione

Da un certo tempo vengono prodotti anche computer senza drive per dischetti. Per l'installazione di alcuni prodotti software di automazione è però necessario un drive per dischetti per l'installazione delle chiavi di licenza fornite su dischetto.

Con lo Automation License Manager su un PC senza drive per dischetti le licenze possono essere installate tramite le seguenti vie:

| Media di trasporto | Tipo di chiave di licenza | |
|---|---|---|
| | Autorizzazione (p. es. STEP 7 V5.2) | License-Key (p. es. Floating License Key STEP 7 V5.3) |
| Drive per dischetti esterno con interfaccia USB | X | X |
| USB Stick come mezzo di trasferimento da un computer con drive per dischetti ad un computer senza drive per dischetti | -- | X |
| Secondo computer con drive per dischetti collegato alla rete aziendale e trasferimento tramite la rete | X ¹⁾ | X ¹⁾ |
| Secondo computer con drive per dischetti e trasferimento offline (vedi la Guida dello Automation License Manager) | X ¹⁾ | X ¹⁾ |

¹⁾ Lo Automation License Manager deve essere installato su entrambi i computer.

Avvertenza

Una License Key si riconosce nello Automation License Manager dal numero di licenza a 20 posizioni.

Una autorizzazione è costituita da un numero di licenza a 10 posizioni.

Part

V

5 Espanol

En los años lejanos, lejanos el Siemens ha encargado la elaboración de la defensa para los productos informáticos a la firma StopCopy.

Aquella ha elaborado la defensa en base de los ficheros clave instalados sobre los disquetes especiales Amarillos - de aquí y el nombre.

Se afirmaba además que la defensa hasta esto es segura que "ser seguro guardar sus inversiones". Las gracias grandes humanas los especialistas StopCopy por el trabajo hecho en el campo de la creación de la atmósfera de la accesibilidad de los productos del Siemens a las masas anchas de los programadores. Esto ha hecho las decisiones de programa y duras muy popular y reclamado por todo el mundo que ha permitido con dignidad rivalizar con otros productores de la automática incluso en su territorio. Tomar para el ejemplo de los EEUU con y ellos B&R y General Electric... Y conformemente ha conservado realmente las inversiones metidas. De hecho es necesario comprar el hierro da lo mismo al Siemens.

El programa dado es destinado para la instalación de las llaves de las licencias en el caso, cuando: Ha comenzado{pisado} "el día negro del programador" - el sistema de operaciones se ha estropeado junto con todas las licencias, y trabajar es necesario, incluso en las regiones poco accesibles; Cuando ha salido el producto nuevo caliente, y el dinero por los jefes no dan; Quieres de estudiar simplemente para el desarrollo general{común}.

Es elaborado en relación a la salida de la versión ALM 3.0 - el Manager Litsenzy, después de que, así llamados, "escribir copy" las llaves largas de la licencia dejaban de trabajar por su menosprecio este Manager Litsenzy.

"Requeridamente copy" pudo simplemente copiar las llaves en el catálogo de las licencias C:\AX NF ZZ. Ellos utilizaban de servicio "a" "entrada" en el sistema de la licencia ALM <v3.0, que fue cubiertas con la salida Step7 v5.4 SP1.

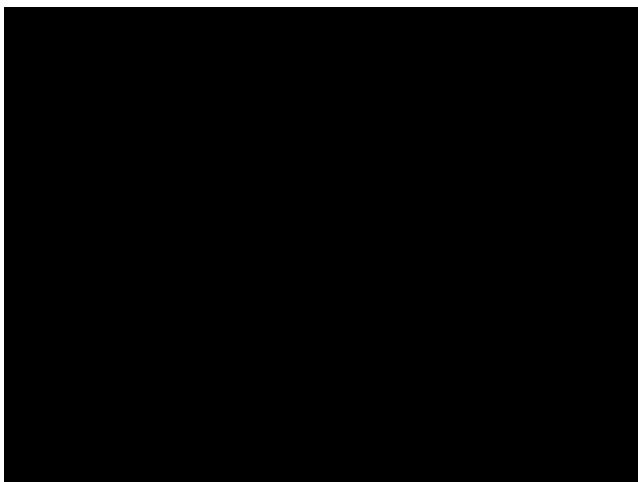

Fue aplicadas también la codificación adicional de las llaves, por eso las llaves nuevas no son mostradas en ALM V2.2.

Las llaves nuevas son representadas incorrectamente en las versiones viejas de los programas EKB_Rename, EKB_Backup y en EKB_Install <v.2007.03.03.

No llamo utilizar el programa del Siemens en los fines interesados. Los programas para los más objetivos de producción deben ser puesto{empenado} en general en los presupuestos de los proyectos y ser adquirido al dinero del cliente.

Poco a quien vendrá a la cabeza poner al cliente izquierdo PCS7 con las llaves izquierdas y sin certificado a una grande producción.

Y para el uso doméstico no hay probable nada peor alboroto con los disquetes de licencia. Eran los casos, cuando la licencia derrengada de firma Amarilla comenzaba a desmoronarse al Extranjero con de las llaves en la localidad lejana sin teléfono e Internet.

5.1 IntoductionE

En la ventana del programa son situado:

El rbol con la lista de los programas y la tabla con la lista de las llaves

Paul para la conclusi n de los comentarios y la informaci n de informaci n

Total keys = 2733 Selected keys = 0 It is installed keys = 153 For testing purposes only --- See more info in Help file

5.2 Estableceremos las llaves tarde

Durante la instalación de los programas Simatic renunciamos a la instalación de las llaves.

5.3 Tipo de licencia

Hay 2 básicos como las llaves:

1. Las llaves cortas del modelo viejo hasta el año 2004
2. Las llaves largas del modelo nuevo de 2004

| |
|--|
| Preferencia de instalación |
| <input checked="" type="radio"/> Llaves largas |
| <input type="radio"/> Llaves cortas |
| <input type="radio"/> Todas las llaves |

Las llaves cortas del modelo viejo hasta el año 2004 son compatibles hacia arriba con la versión del manager de las licencias ALM. También para el trabajo con estas llaves es posible utilizar el manager viejo AuthorsW.

Junto a la instalación del fichero corto sobre el disco duro hay un fichero adicional de servicio con la ampliación HRD. En el par con EKB por el fichero de la llave ellos componen la licencia establecida. La ausencia HRD del fichero no permite trasladar la llave a otro disco o devolver al disquete y lleva al bloqueo del fichero clave.

Las llaves largas del modelo nuevo de 2004 son compatibles solamente con la versión del manager de las licencias ALM. Para el trabajo con estas llaves es imposible utilizar el manager viejo AuthorsW.

Para más base y la diferencia

Tipo de licencia

| | | |
|--|------------------------------------|--|
| | Las llaves cortas S7PROF53. EKB | Las llaves largas SIFLS7PROF0503. EKB |
|--|------------------------------------|--|

| | | |
|---|---|--|
| La longitud del nombre del fichero, los símbolos | 8 | > =14 |
| El formato del nombre del fichero | Corto DOS | Largo Windows |
| La dimensión del fichero, el byte | 1280 | 2560 |
| El número en serie, los símbolos | 10 | 20 |
| El modo todo del cifrar | El disfraz consecutivo aumentativo por la máscara | El disfraz consecutivo aumentativo por la máscara con el cifrar por las Microsofts |
| El fichero auxiliar HRD | S7PROF53.HRD | No |
| Los tipos ilimitados de las licencias | De una plaza | Que navega de red, de una plaza |
| Los tipos limitados de las licencias Trial: tiempo SIMF y para los 14 días SITT | X*.EKB De reserva para los 14 días | Rentale SIRT por horas, de muchos días |
| A través de USB Flash la memoria | Es imposible | Multifuncionalmente junto a la instalación y el traslado a través de ALM |
| El programa el manager | AuthorsW y ALM | Solamente ALM |

- La elección como la licencia
- Float in the network "SIFL"
 - Single work place "SISL"
 - Rental (365 days) "SIRT"

- Ilimitada (Unlimited)
- Count relevant (Tag/s)
- Rental (Limited Hours, Limited Days, Expiration Date)
- Trial (Limited Days)
- Pay-per-use
- Demo (Limited Hours, Limited Days, Expiration Date)
- Power Pack

Vigencia

- Ilimitada (Unlimited): de vigencia ilimitada
- Count relevant: número de variables
- Rental: tiempo de vigencia restante + unidad / fecha
- Trial: tiempo de vigencia restante (tiempo de vigencia total)
- Pay-per-use: según contrato
- Demo: tiempo de vigencia restante + unidad / fecha

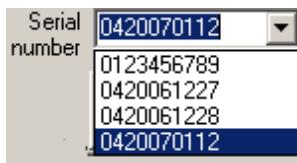

- Contract: seg n contrato
- Upgrade: seg n contrato
- Power Pack: seg n contrato

5.4 N° de licencia

Número de serie de la licencia de software
(10 cifras = autorización; 20 cifras = clave de licencia)

| | | |
|---------------|------------|----------------------|
| Serial number | 0420061231 | 00401000002006012031 |
|---------------|------------|----------------------|

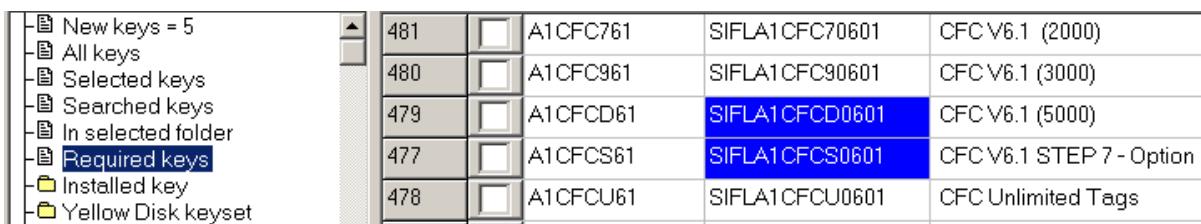

Podrás no cambiar estos números, y concederlo hacer al programa
O podrás escoger uno de los números de la lista de los números de las llaves establecidas en su ordenador.

5.5 Required keys

La lista de las llaves necesarias para los programas establecidos.

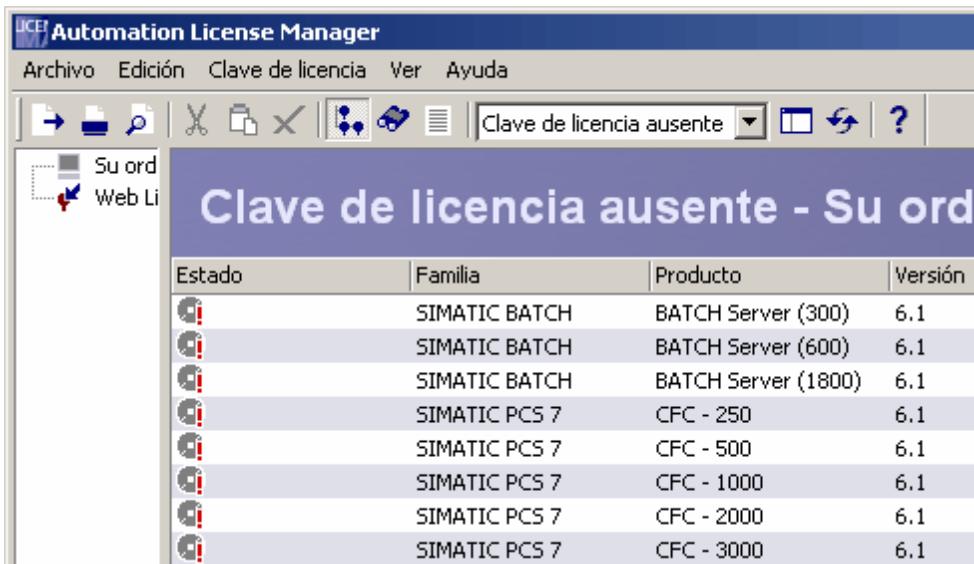

De las llaves tales establezcan solamente uno con la cantidad necesaria es tag (el ejemplo para CFC en el dibujo)

The screenshot shows a table with columns for key ID, name, and product information. The table includes the following rows:

| - | 481 | <input type="checkbox"/> | A1CFC761 | SIFLA1CFC70601 | CFC V6.1 (2000) |
|---|-----|--------------------------|----------|----------------|--------------------------|
| - | 480 | <input type="checkbox"/> | A1CFC961 | SIFLA1CFC90601 | CFC V6.1 (3000) |
| - | 479 | <input type="checkbox"/> | A1CFCD61 | SIFLA1CFCD0601 | CFC V6.1 (5000) |
| - | 477 | <input type="checkbox"/> | A1CFCS61 | SIFLA1CFCS0601 | CFC V6.1 STEP 7 - Option |
| - | 478 | <input type="checkbox"/> | A1CFCU61 | SIFLA1CFCU0601 | CFC Unlimited Tags |

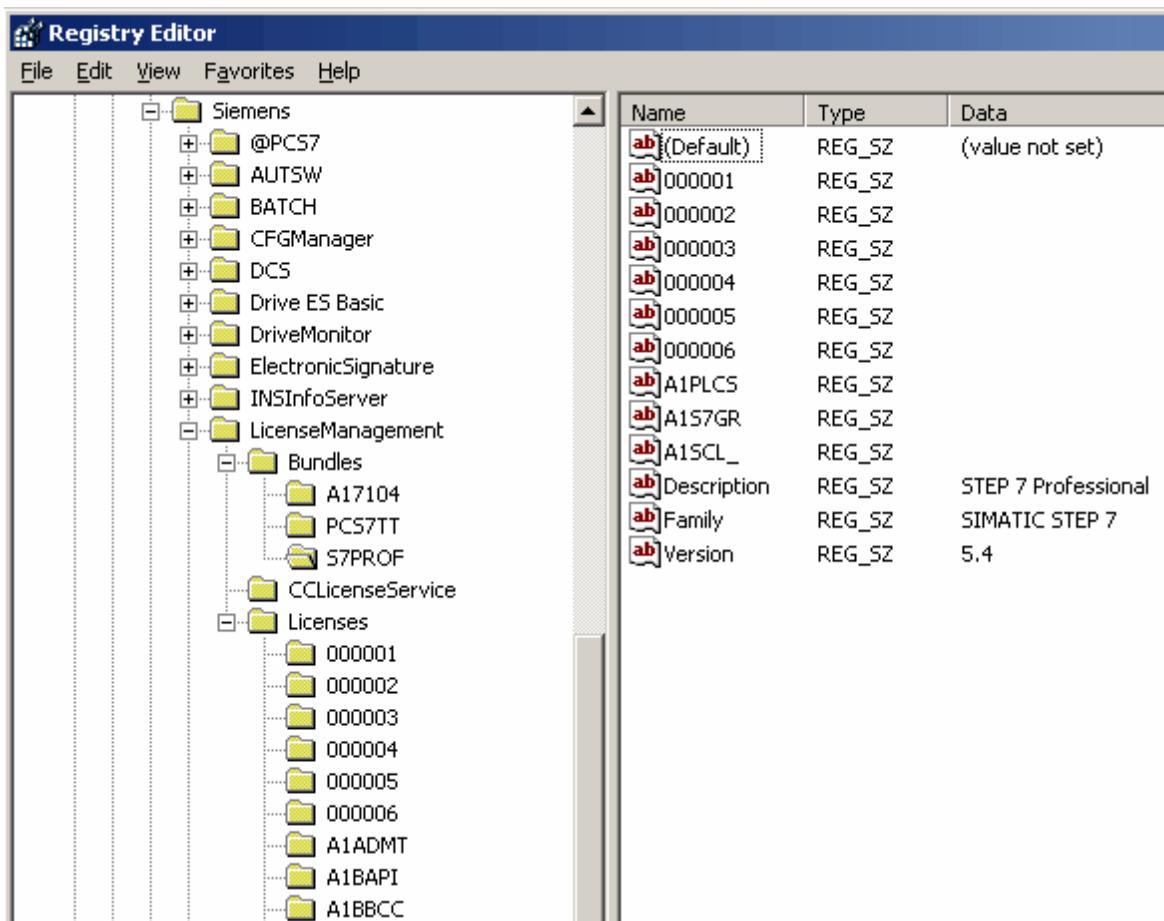

Podrás precisar los nombres de las llaves que faltan en el manager de las licencias ALM

La llave compleja S7PROF* para la versión profesional STEP7 puede utilizarse en vez de 4 llaves separadas A17104 *, A1PLC_*, A1S7GR *, A1SCL_*.

La llave PCS7TT* para el programa PCS7 puede utilizarse en vez del juego entero de las llaves.

Podrás precisar los nombres de las llaves adicionales que faltan en el manager de las licencias ALM

5.6 Encontrar la llave

Para la búsqueda de la llave introduzcan en la línea de la búsqueda la palabra o la combinación *, que puede encontrarse en el nombre del fichero o el nombre de la llave.

Presionen el botón "Encontrar la llave".

Por ejemplo para la búsqueda de las llaves para Step7:

- Introduzcan la palabra Step o Step prof (el registro de los símbolos no es importante) - la parte del nombre de la llave.
- O introduzcan la palabra s7prof - la parte del nombre del fichero.

En el árbol de los productos se reflejará la línea "Es encontrado N de las "palabras", y en la tabla reflejarse la lista de las llaves que corresponden al parámetro dado de la búsqueda.

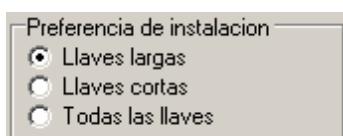

5.7 Install key

Podrás establecer una llave o el grupo de las llaves reganadas a los discos indicados flexibles, duros o externo USB el disco (Flash el disco o el Flash la carta en CardReader). Hay además algunas variantes.

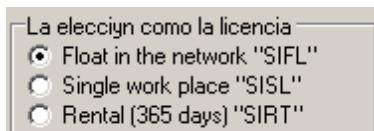

Es posible escoger uno de las variantes de la instalación reganando las llaves:

1. Todos los - corto y largo
2. Solamente largo
3. Solamente corto
4. La instalación con la preferencia:
 - Son establecido largo y si no existe largo para el tipo regañado de la licencia, es establecida la variante corta de la llave.
 - Son establecido corto y si no existe corto para el tipo regañado de la licencia, es establecida la variante larga de la llave.

Además sobre el botón de la instalación general se cambia el cuadro en concordancia con la elección

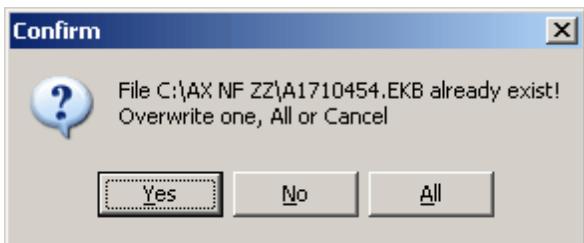

Si conectas o desconectas los portadores intercambiables durante el trabajo del programa, para la renovación de la lista de los portadores presionen el botón "Renovar la lista de los discos". El portador de nuevo conectado aparecerá en la lista.

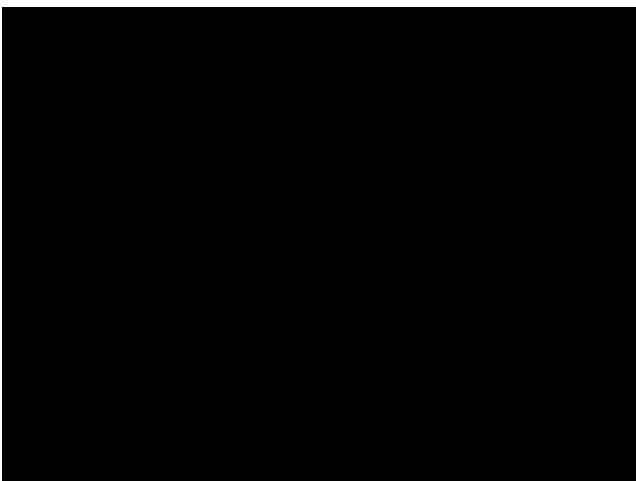

Después de la instalación los nombres que corresponden de las llaves serán pintados

| | | | |
|-------------------------------------|----------|----------------|--------------------------|
| <input checked="" type="checkbox"/> | S7PROF54 | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| <input checked="" type="checkbox"/> | S7PROF53 | SIFLS7PROF0503 | STEP 7 V5.3 Professional |

Si la llave es establecida ya sobre el disco, aparecerá la ventana con la petición confirmar la instalación encima de disponible.

Si usted tiene unas llaves originales, es necesario renunciar naturalmente a la grabaci n

5.8 Yellow Disk

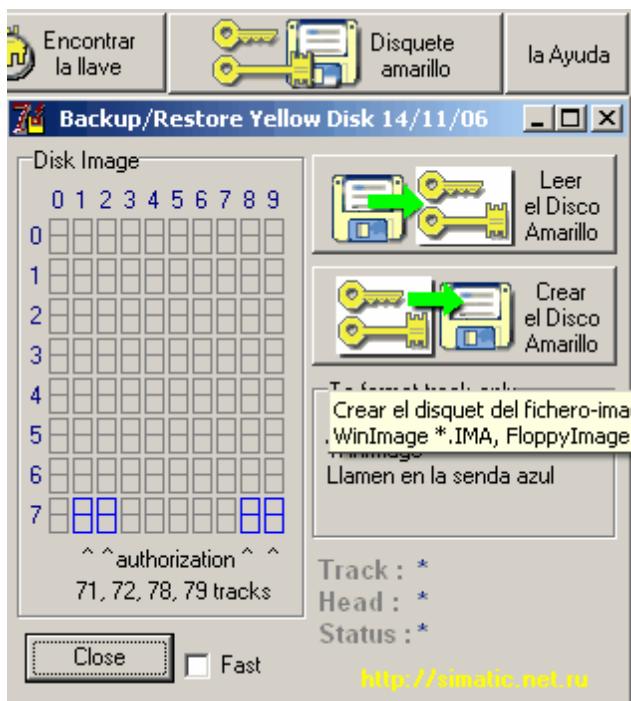

Con la ayuda de esta utilidad es posible crear Amarillo el disquet de las im genes de algunos tipos:

[IMA](#), [IMZ*](#) - WinImage

[IMG](#) - FloppyImage

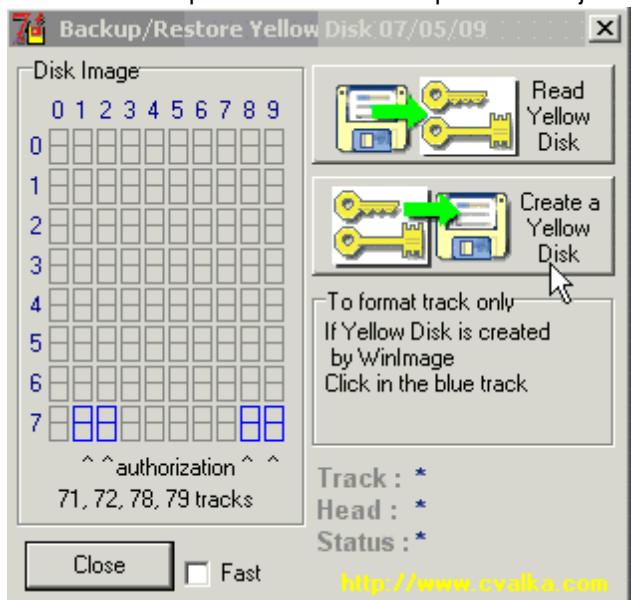

[BIN](#) - FDA (Floppy Disk Analyzator for DOS)

IMZ es necesario preliminarmente desempaquetar las im genes en el formato [IMZ](#) (WinImage) en el fichero con la ampliaci n IMA.

Por la terminación de la grabación ser escrita la senda "de licencia".

En el momento presente al Siemens para este objetivo se utilizan las sendas de 71 hasta 79.

Si habéis creado ya Amarillo el disquet en otro programa (en aquell WinImage o FloppyImage), Aquello podéis es separado escribir la senda "de licencia", habiendo presionado la celda {jaula} que corresponde.

Puedes comprobar la corrección de la creación del disquet en el programa el manager de las licencias AutorsW o ALM,

Habiendo escogido la comprobación de la integridad de cualquier llave.

Por el "rechinamiento" carácterístico del motor de paso del traslado de la cabeza es posible también

determinar sobre el éxito del procedimiento.

Si no oír es el "rechinamiento" - significa el disquete fue creado incorrectamente o no fue escrita la senda necesaria.

Podemos sucesivamente escribir en este caso las sendas de 71 hasta 79 y comprobar en la integridad en el manager de las licencias.

Para la lectura de firma Amarillo los disquetes en el fichero-imagen podemos utilizar el botón "Read Yellow Disk" o contar a través del programa WinImage.

Junto a la tentativa de la lectura de la senda "de licencia" WinImage dará la prevención{advertencia} del error de la lectura.

Presionen botón "Menospreciar" para la continuación de la creación de la imagen.

Podemos recordar el número de esta senda para el formateo en nuestro programa.

5.9 Export table

Por la presión del botón justo del ratoncito es provocado el menú local.

Es posible copiar el contenido de la celda en el tope del cambio para la inserción ulterior en un otro anexo.

| Select> | Corto nombre | Largo nombre | Nombre de licencia |
|---------|--------------|----------------|--------------------|
| 566 | A1710454 | SIFLA171040504 | STEP 7-BASIS V5.4 |
| 416 | A1PLCS51 | | |
| 402 | A1S7GR52 | | |

Copiar el texto en el tope del cambio: SIFLA171040504

Conservar la tabla en el fichero: Instaladas.txt

Create YD with 1 key : SIFLA171040504

Es posible conservar la tabla corriente en en el fichero de texto.

En calidad de los símbolos divisorios de las columnas se utiliza el símbolo el tabulador.

En el redactor Microsoft Word puedes transformar este texto en la tabla.

Es posible crear la imagen Amarillo los disquetes con 1 llave para la grabación consecuente al disquete.

5.10 Unknow keys

Example of unknow keys

| Short name | Long name | License name | Version |
|------------|----------------|---------------------------------|---------|
| A9SDC140 | SIFLA9SDC10400 | System Diagnostics - CPUs 400 | v4.0 |
| A9SDPB40 | SIFLA9SDPB0400 | System Diagnostics - PB Slave | v4.0 |
| A9SDPN40 | SIFLA9SDPN0400 | System Diagnostics - PN Devices | v4.0 |
| A1S7TS61 | SIFLA1S7TS0601 | SIMATIC TeleService | v6.1 |

5.11 desactivar la licencia de prueba

¿Cómo se puede desactivar la licencia de prueba (Trial License) cuando aparece un aviso que dice que ésta ya ha caducado, a pesar de que está instalada la licencia flotante (Floating License)?

Instrucciones:

La "Trial License" sólo se puede utilizar con el software SIMATIC durante un tiempo limitado, por ejemplo para tests, y después de su activación la licencia sólo es válida durante un máximo de 14 días. Si después de transcurrido este tiempo, se instala una licencia de utilización ilimitada de tiempo (Single License, Floating License o Upgrade License) y sigue apareciendo el mensaje que indica que la "Trial License" ya ha caducado, le recomendamos borrar la "Trial License" de la carpeta "AX NF ZZ":

Procedimiento para borrar una "Trial License":

1. Abra el ALM en MS Windows, mediante la opción

- "Inicio -> SIMATIC -> License Management -> Automation License Manager"

Seleccione ahora con el cursor la unidad de disco (por ejemplo, "C") en la que se instala la licencia. En la ventana derecha del Automation License Manager, aparece la tabla con las licencias instaladas. Para visualizar las licencias, se necesita indicar el nombre del archivo (License Key) y el número de licencia de 20 números. Si no se ven estas columnas, ábralas con ayuda del diálogo "Definir vistas":

- "Ver -> Definir..."

En la parte inferior de este diálogo, seleccione "License Key" y el "Número de licencia" dentro del registro "Columnas".

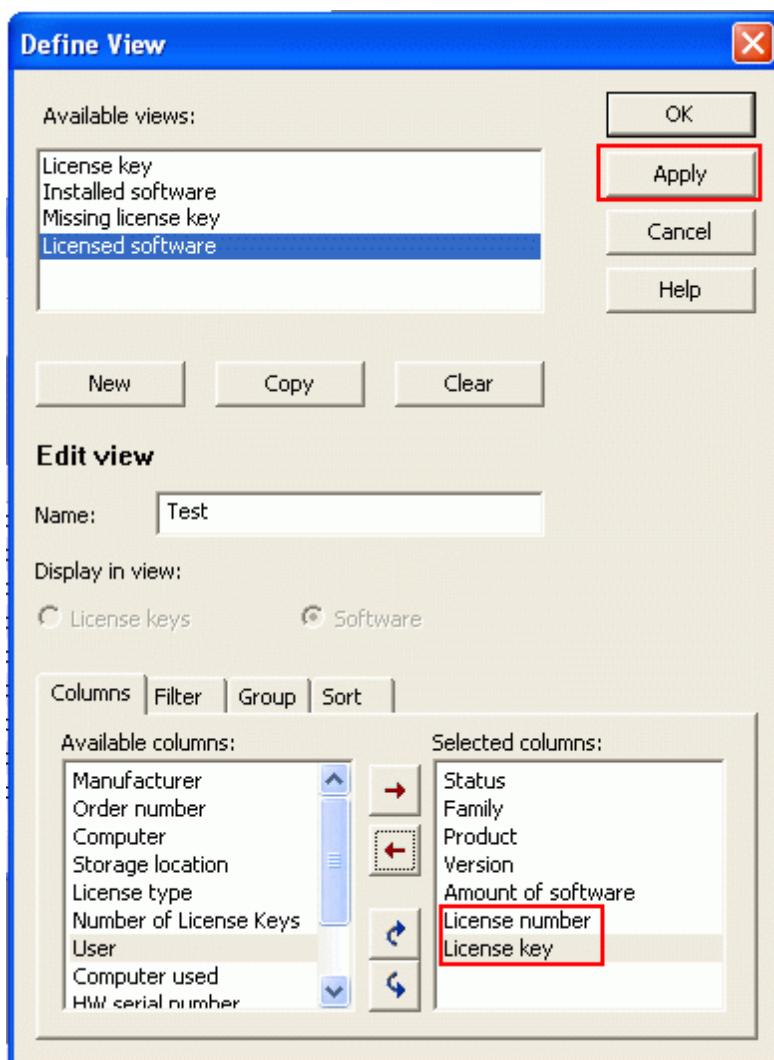

Figura 01

A continuación, indique un nombre en "Elaborar vista" y haga clic sobre el botón "Aceptar". Despu s de confirmar todo con OK, las columnas "License Key" y "N mero de licencia" ya aparecen en el Automation License Manager.

2

Seleccione la carpeta "AX NF ZZ" en el explorador, dentro del disco duro o de la unidad "C", de forma que en la ventana de la derecha aparezca el nombre del archivo de la licencia.

Si no se pueden ver el directorio "AX NF ZZ" o los archivos contenidos dentro de  l, abra el di logo "Herramientas -> Opciones de carpeta..." y elija el registro "Ver":

- Desactive aqu  la opci n "Ocultar archivos del sistema protegidos (recomendado)" y
- Active la opci n "Mostrar todos los archivos y carpetas".

Haga clic a continuación sobre el botón "Aceptar" y confirme todo con OK.

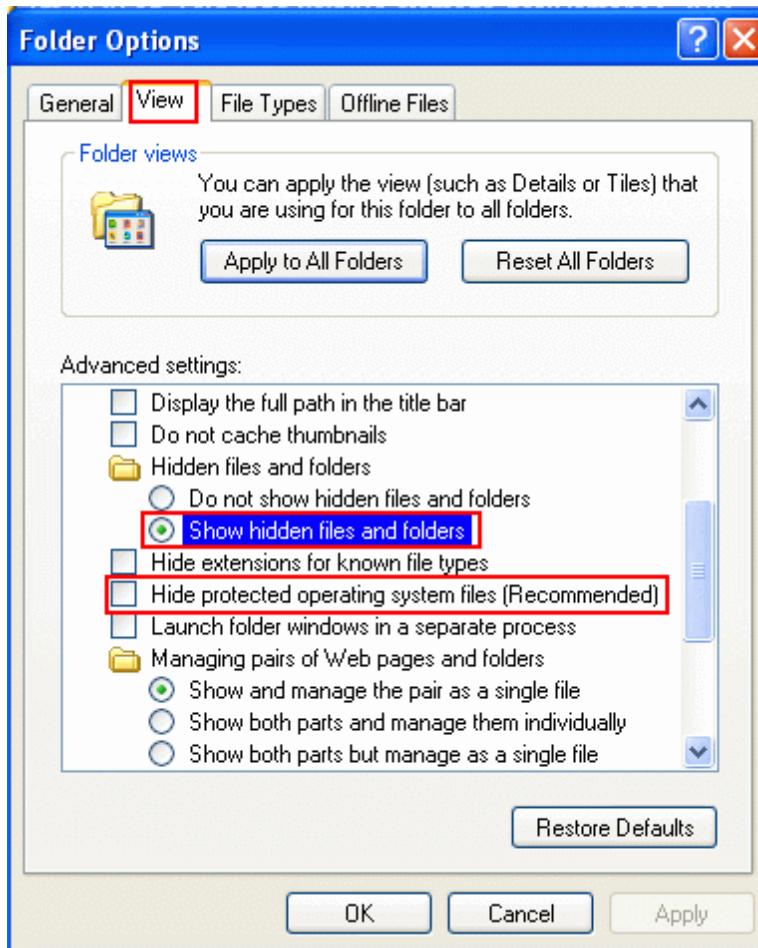

Figura 02

Ahora ya se muestra el directorio "AX NF ZZ" en el explorador.

3 Compare ahora en el Automation License Manager en nombre de archivo (License Key) de la "Trial License" con el nombre de archivo en la carpeta "AX NF ZZ". Con ayuda de la vista ajustada en el Automation License Manager, se puede averiguar el nombre de archivo para la "Trial License" a borrar (figura 03), el cual está disponible en la carpeta "AX NF ZZ".

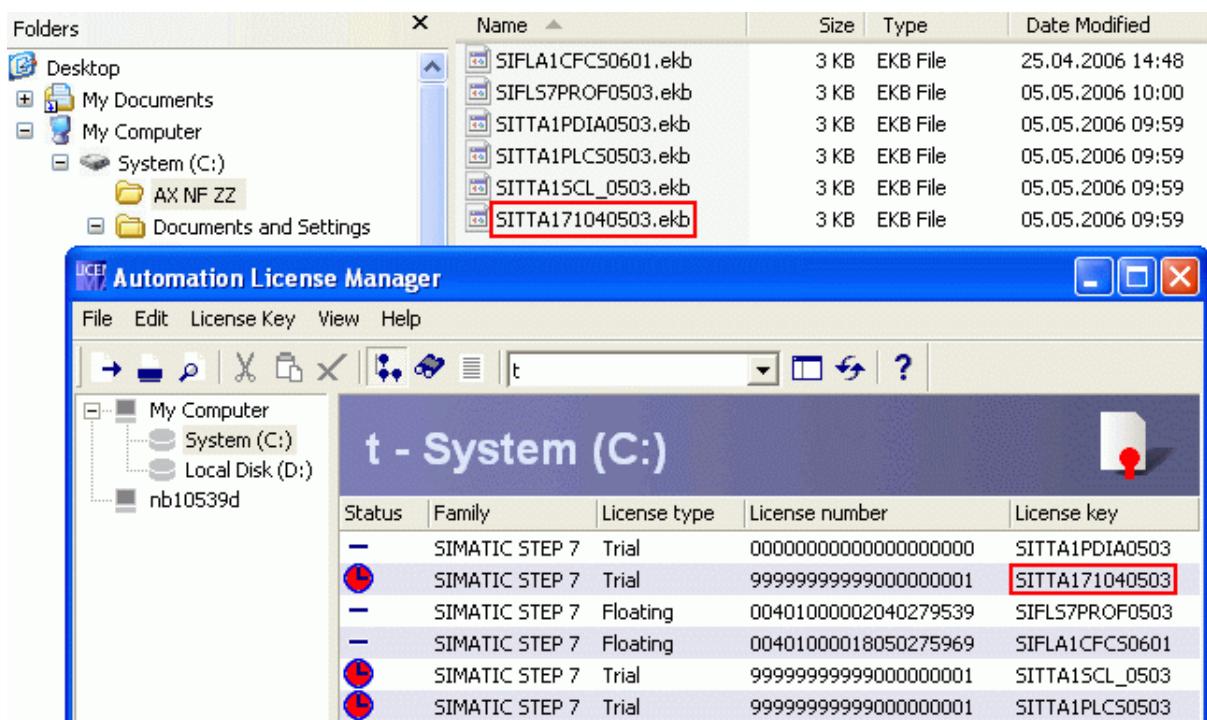

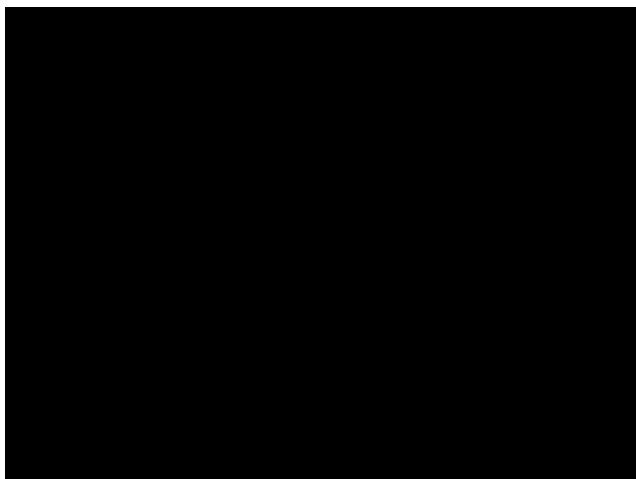

Figura 03

4 Seleccione la "Trial License" encontrada en el directorio "AX NF ZZ" y haga clic con el botón derecho del ratón. A continuación, haga clic en la opción "Borrar" del menú contextual. Después de su borrado, ya no se debe mostrar el aviso arriba descrito.

5.11.1 Install Trial keys

Durante la instalación de la llave temporal en los catálogos Windows y Windows\System32 hay unos catálogos *attis con un fichero vacío.

La llave temporal **SITTA*.ekb** es establecida en el catálogo **C:\AX NF ZZ**

See Remove Trial keys

5.11.2 Remove Trial keys

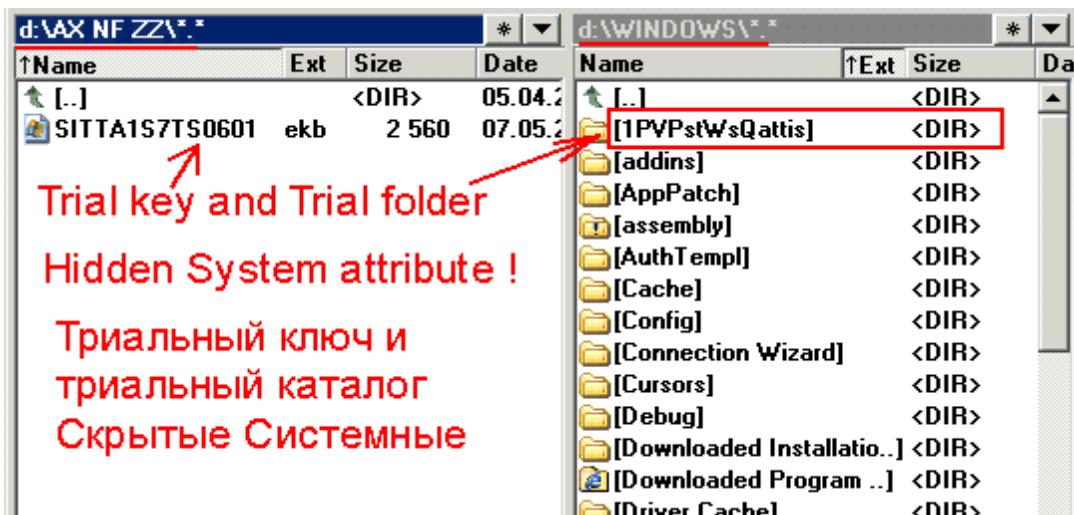

Para ciertos programas es posible establecer las llaves temporales para un período de algunas horas a lo largo del trabajo.

Después de la fin del plazo del trabajo hace falta quitar las llaves temporales y sus huellas.

Son posibles en caso contrario los problemas junto al trabajo de las llaves normales.

Es necesario quitar también el catálogo en la carpeta Windows e Windows\System32

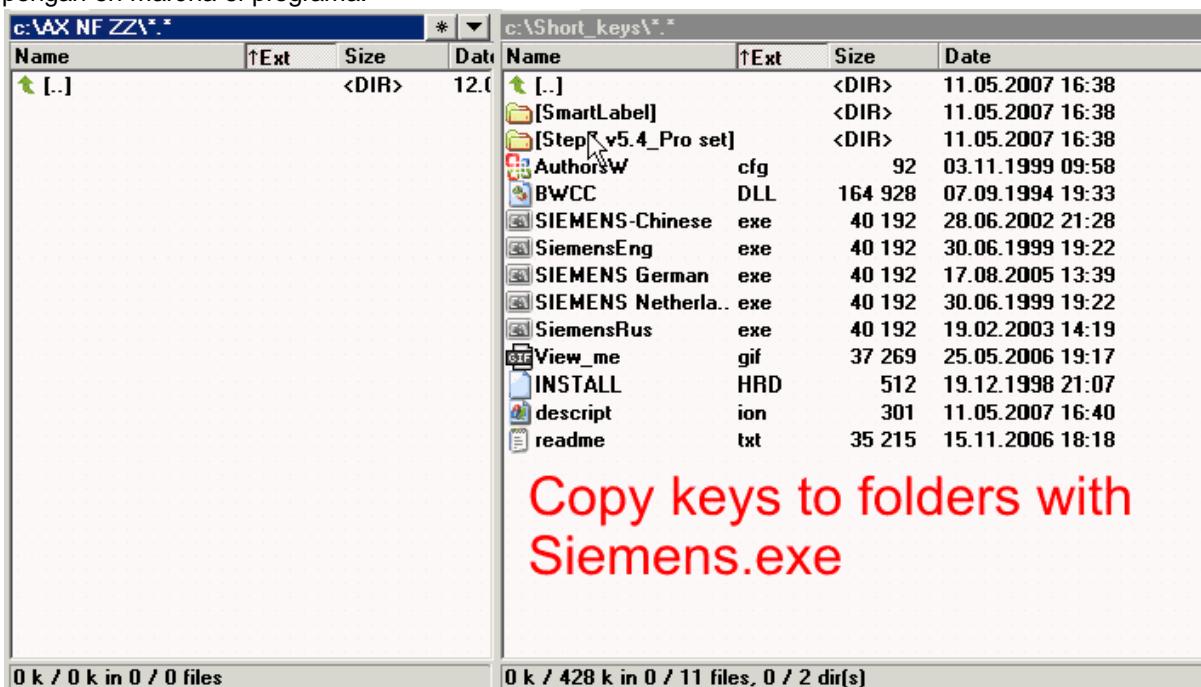

En este catálogo se encuentra el fichero vacío.

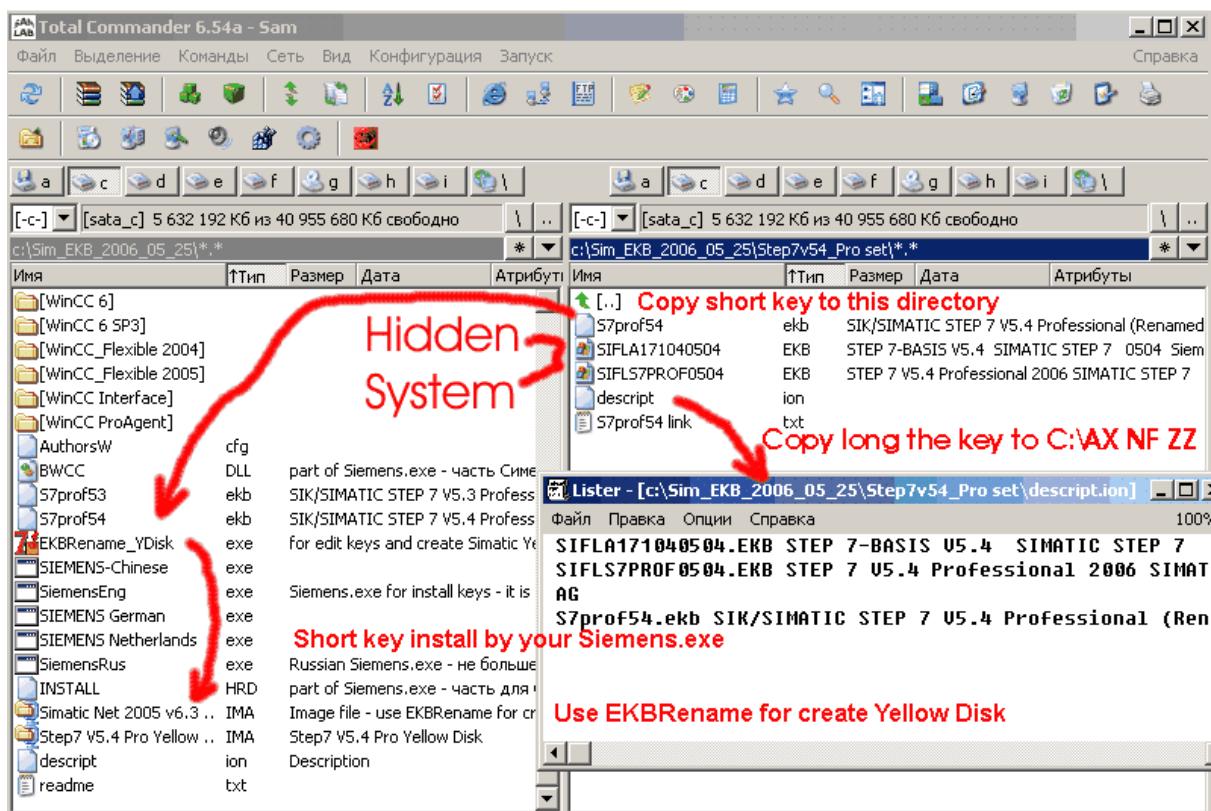

5.12 Siemens.exe

Para la instalación de las llaves cortas del juego es posible utilizar el programa Siemens.exe.

Copien en el catálogo con el programa las llaves exigidas (no más de 100 llaves simultáneamente) y pongan en marcha el programa.

Si en el cat logo con Siemens_exe no hay llaves, junto al lanzamiento ser deducido{quitado} el mensaje siguiente

5.13 transferir una licencia a un PC que no dispone de disquetera

¿Qué posibilidades existen para transferir una licencia a un PC que no dispone de disquetera?

Indicaciones de configuración:

Desde hace algún tiempo, se fabrican PCs sin disquetera. Pero, para la instalación de algunos productos software de automatización se necesita una disquetera y sí poder instalar la llave de licencia que se suministra dentro de un disquete.

Con el „Automation License Manager“, las licencias se pueden instalar de la siguiente forma en PCs sin disquetera:

Medio de transporte

Tipo de licencia

| | Autorización (por ejemplo, para el STEP 7 V5.2) | Llave de licencia (por ejemplo, llave de licencia flotante para el STEP 7 V5.3) |
|--|--|---|
| Disquetera externa con interfase USB | X | X |
| USB Stick como medio de transporte desde un PC con disquetera a otro PC sin ella | -- | X |
| Segundo PC con disquetera conectado a la red de la empresa y transferencia a través de dicha red | X ¹⁾ | X ¹⁾ |
| Segundo PC con disquetera y transferencia Offline (consulte la ayuda Online del „Automation License Manager“) | X ¹⁾ | X ¹⁾ |

¹⁾ El „Automation License Manager“ tiene que estar instalado en ambos PCs.

Advertencia:

La llave de licencia en el „Automation License Manager“ se reconoce por su número de licencia de 20 dígitos.

La autorización tiene un número de licencia de 10 dígitos.

Part

VI

6 Deutsche

Da es noch in das Stadium der Erarbeitung, so einige Funktionen mit den Bodenglatzen nicht vollstndig zugnglich sein oder erfllt werden knnen{drfen}

Die gerade{Direkte} Aufzeichnung auf die Festplatte und Flash das Gedchtnis{Speicher} arbeitet. Auf Flash das Gedchtnis{Speicher} werden nur die langen Schlssel - die ganze Liste etwas Minuten aufgezeichnet

Man mu die gerade{direkte} Aufzeichnung der Schlssel auf die Diskette ergnzen

Man mu die Liste der Schlssel ausbessern{wiederherstellen}

In die fernen, fernen Jahre hat der Siemens die Erarbeitung der Sicherung fr seine{ihre} Softwareprodukte die Firma StopCopy betraut. Jene hat die Sicherung aufgrund der Schlsseldateien, die auf dem besonderen Muster der formatierten gelben Diskette - von hier aus und die Bezeichnung aufgestellt sind, entwickelt.

Dabei wurde behauptet, da ist die Sicherung dabis zu sicher, da " wird es sicher sein, Ihre Investitionen " zu behten .

Groe menschliche Danke den Spezialisten StopCopy fr die durchgefhrte Arbeit auf dem Gebiet der Bildung der Atmosphre der Verfgbarkeit der Produkte des Siemens den breiten Massen der Programmierer. Es hat die programm-und Hardwarebeschlsse sehr populr und gefordert nach ganzer Welt gemacht, da hat wrdig erlaubt, mit allen Produzenten Automatik sogar auf ihr Territorium zu bewerben. Als Beispiel USA mit und ihrer B&R und General Electric zu nehmen. . .

Und entsprechend hat gltig die angelegten Investitionen aufbewahrt. Doch mu man das Eisen dennoch bei dem Siemens kaufen.

Das gegebene{Vorliegende} Programm ist fr die Installation der Schlssel der Lizenzen im Falle, wenn vorbestimmt:

Es hat " der schwarze Tag des Programmierers " - das System angebrochen ist zusammen mit allen Autorisationen hinuntergeflogen, und arbeiten es mu, sogar in den schwer zugnglichen Bezirken; Wenn das neue heisse Produkt herausgekommen ist, gibt und des Geldes zu ihm die Leitung wrend nicht;

Ist einfach Du willst fr die gemeine Entwicklung zu studieren.

Ist in Zusammenhang mit dem Produktionsaussto der Version ALM 3.0 - der Geschftsfrher der Autorisation der Lizenzen entwickelt, nach dem, so genannt, " schnell kopiert " die langen Schlssel der Autorisation aufgehrt haben, wegen ihres Ignorierens diesen Geschftsfrher der Autorisation zu arbeiten.

" Schnell kopiert " waren die Schlssel mglich ist einfach, in den Katalog der Lizenzen C:\AX NF ZZ zu kopieren. Sie benutzten den dienstlichen "Eingang" im System der Autorisation ALM < v3.0, die mit der Abmeldung Step7 v5.4 SP1 bedeckt war.

Es war die zustzliche Kodierung der Schlssel auch verwendet, deshalb sind die neuen Schlssel in ALM v2 nicht sichtbar. 2.

Die neuen Schlssel werden in den alten Versionen der Programme EKB_Rename, EKB_Backup und in diesem Programm auch EKB_Install <v.2007.03.03.

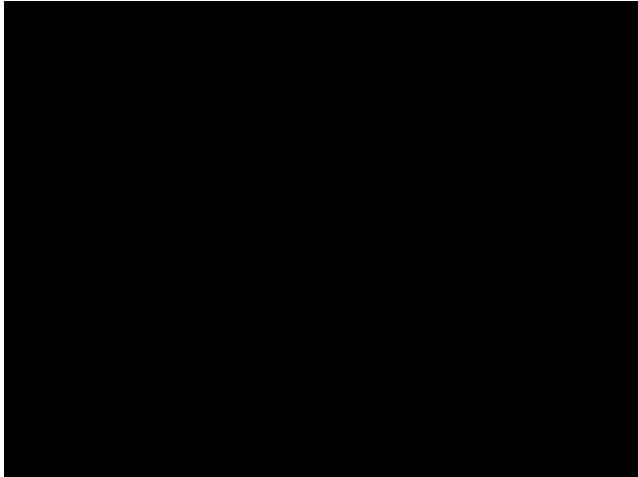

Ich fordere nicht auf, die Software des Siemens in den eigenntzigen Zielen zu benutzen. Die Programme fr die Produktionsziele sollen in die Anschlage der Projekte im Grunde versetzt werden und auf das Geld des Kunden erworben werden.

Wenig wem wird zum Kopf kommen, dem Kunden linke PCS7 mit den linken Schlsseln und ohne Zertifikat auf die groe Produktion zu liefern.

Und fr die husliche Nutzung wahrscheinlich gibt es nichts schlechter des Gepolters mit den Lizenzdisketten.

Es kamen die Flle vor, wenn die alte Firmen-Gelbe Lizenz begann, bei dem Auslnder mit dem

Verschwinden der Schlüssel im fernen Gelände ohne Telefon und des Internets zu verderben.

6.1 IntroductionG

Im Fenster des Programms sind gelegen{angeordnet; vorhanden}:

Den Baum mit der Liste der Programme und die Tabelle mit der Liste der Schlüssel

Das Feld für die Schlussfolgerung der Kommentare und die Informationsinformation

Die Zeile der Wahl{Auswahl} der Sprache{Zunge} des Interfaces

Die Zeile der Wahl{Auswahl} der Disk{Platte} für die Anlage{Installation} der Schlüssel und der Knopf der Erneuerung der Liste der Disks{Platten}

Die Zeilen der Einführung der Seriennummern{Serienzimmer}

Die Zeile und der Knopf für die Suche des Schlüssels nach dem aufgegebenen Wort

Der Knopf des Aufrufs des Fensters für die Arbeit mit den Weisen{Gestalten} Der gelben Disketten

Das Feld der Wahl{Auswahl} der Präferenzen als die Lizenz bei der Anlage{Installation}

Die Pfeile der Installation kurz, lang oder aller gewählten Schlüssel

Wie kann die Trial License deaktiviert werden, wenn die Meldung erscheint, dass die Trial License abgelaufen ist, obwohl die Floating License installiert wurde?

Welche Möglichkeiten gibt es, um Lizenz-Schlüssel auf einem PC ohne Diskettenlaufwerk zu transferieren?

6.2 Wir werden die Schlüssel spezifizieren aufstellen

Während der Installation der Programme Simatic sagen wir uns von der Installation der Schlüssel los.

6.3 Lizenz-Typ

Lizenz-Typ

- ohne Beschränkung (Unlimited)
- Count relevant (Tag/s)
- Rental (Limited Hours, Limited Days, Expiration Date)
- Trial (Limited Days)
- Pay-per-use
- Demo (Limited Hours, Limited Days, Expiration Date)
- Power Pack

Gültigkeit

- bei ohne Beschränkung (Unlimited): Unbegrenzt

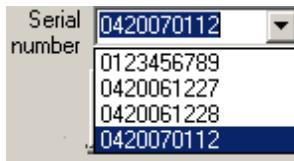

- bei Count relevant: Anzahl Tags
- bei Rental: Restlaufzeit + Einheit / Datum
- bei Trial: Restlaufzeit (Gesamlaufzeit)
- bei Pay-per-use: laut Vertrag
- bei Demo: Restlaufzeit + Einheit / Datum
- bei Contract: laut Vertrag
- bei Upgrade: laut Vertrag
- bei Power Pack: laut Vertrag

6.4 Lizenznummer

Seriennummer der Software-Lizenz
(10-stellig = Autorisierung; 20-stellig = License Key)

| | | |
|---------------|------------|----------------------|
| Serial number | 0420061231 | 00401000002006012031 |
|---------------|------------|----------------------|

Sie können{dürfen} diese Nummern nicht ändern, und es gew hren, dem Programm zu machen
Oder Sie können{dürfen} eine der Nummern aus der Liste der Nummern der Schl ssel, die auf Ihrem
Computer eingerichtet sind, w hlen.

6.5 Required keys

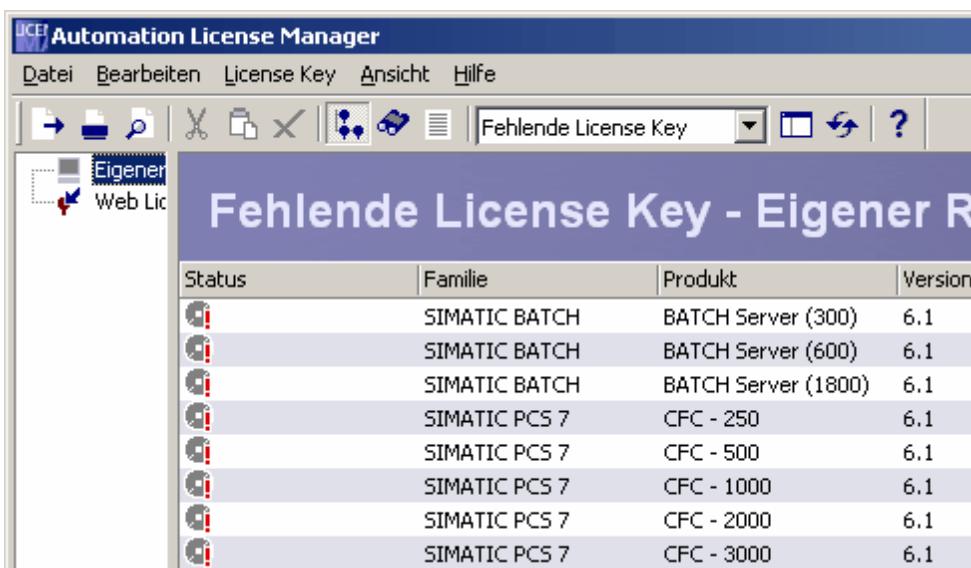

Die Liste der notwendigen Schlüssel für die eingerichteten Programme.

Aus den tagen Schlüsseln stellen{einführen} Sie nur einen mit der notwendigen Menge{Anzahl} auf ist tag

(das Beispiel für CFC auf der Zeichnung)

| | | | | | |
|----------------------|-----|--------------------------|----------|-----------------------|--------------------------|
| - New keys = 5 | 481 | <input type="checkbox"/> | A1CFC761 | SIFLA1CFC70601 | CFC V6.1 (2000) |
| - All keys | 480 | <input type="checkbox"/> | A1CFC961 | SIFLA1CFC90601 | CFC V6.1 (3000) |
| - Selected keys | 479 | <input type="checkbox"/> | A1CFCD61 | SIFLA1CFCD0601 | CFC V6.1 (5000) |

| - In selected folder | 478 | <input type="checkbox"/> | A1CFCU61 | SIFLA1CFCU0601 | CFC Unlimited Tags |
| - Required keys | | | | | |
| - Installed key | | | | | |
| - Yellow Disk keyset | | | | | |

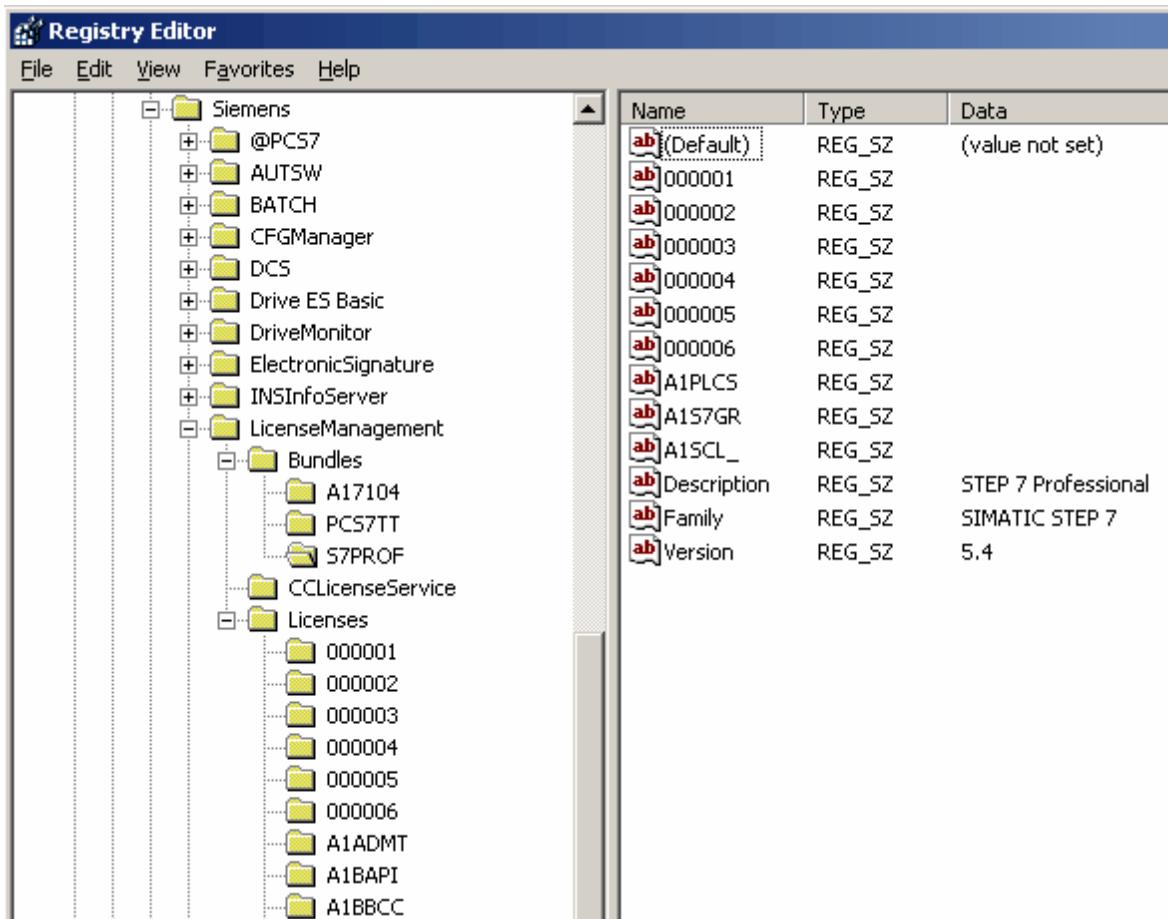

Die Namen der fehlenden Schlüssel können Sie im Manager der Lizenzen ALM präzisieren

Der komplexe Schlüssel S7PROF* für die professionelle Version STEP7 kann anstelle 4 abgesonderter Schlüssel A17104 *, A1PLC_*, A1S7GR *, A1SCL_* ausgenutzt werden.

Der Schlüssel PCS7TT* für das Programm PCS7 kann{darf} anstelle des ganzen Satzes der Schlüssel ausgenutzt werden.

Die Namen der fehlenden zusätzlichen Schlüssel können Sie im Manager der Lizenzen ALM präzisieren

6.6 Installieren von License Keys

Sie können{dürfen} einen Schlüssel oder die Gruppe der gewählten Schlüssel auf die erwähnten flexiblen, harten{starken} Disks{Platten} oder wässerlich USB die Disk{Platte} (der Flash die Disk{Platte}) oder der Flash die Karte) aufstellen{einführen}.

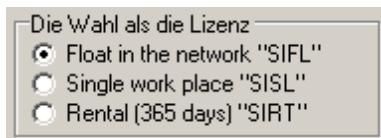

Dabei sind etwas Varianten.

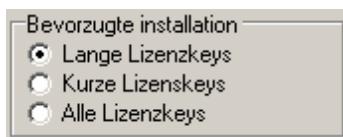

Man kann eine der Varianten der Anlage{Installation} gewählt die Schlüssel wählen:

1. allen - kurz und lang
2. nur lang
3. nur kurz
4. die Anlage{Installation} mit der Prüfung:

- werden lang aufgestellt{eingeführt} und wenn lang für den gewählten Typ der Lizenz nein, so wird die kurze Variante des Schlüssels aufgestellt{eingeführt}.
- werden kurz aufgestellt{eingeführt} und wenn kurz für den gewählten Typ der Lizenz nein, so wird die lange Variante des Schlüssels aufgestellt{eingeführt}.

Dabei ändert sich auf dem Knopf der allgemeinen Anlage{Installation} das Bild entsprechend der Wahl {Auswahl}.

Wenn Sie anschließen schalten Sie oder die ersetzbaren Tasten während der Arbeit des Programms ab, so drücken{tasten} Sie für die Erneuerung der Liste der Träger auf den Knopf ", die Liste der Disks {Platten} " Zu erneuern .

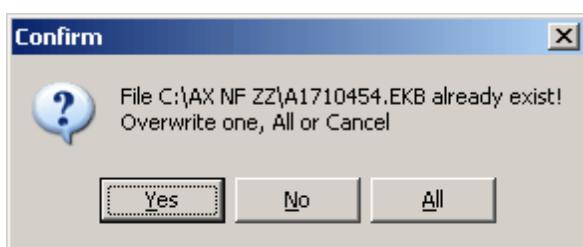

Der von neuem angeschlossene Träger wird in der Liste erscheinen{entstehen}.

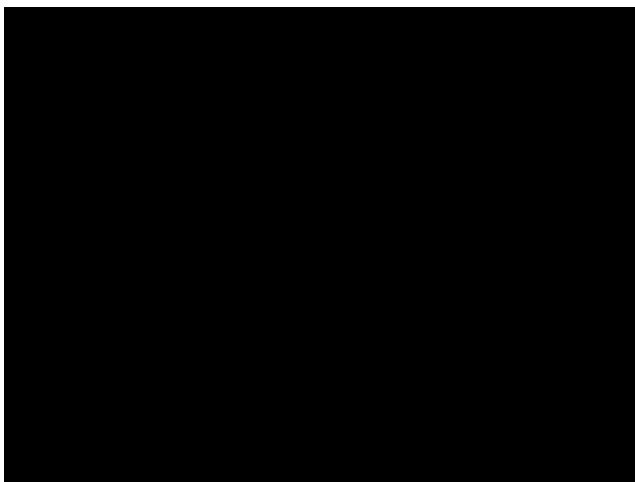

Nach der Anlage{Installation} werden die entsprechenden Namen der Schleuse angestrichen sein

| | | | |
|-------------------------------------|----------|----------------|--------------------------|
| <input checked="" type="checkbox"/> | S7PROF54 | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| <input checked="" type="checkbox"/> | S7PROF53 | SIFLS7PROF0503 | STEP 7 V5.3 Professional |

Wenn der Schlüssel auf der Disk{Platte} schon eingerichtet ist, so wird das Fenster mit der Bitte erscheinen{entstehen}, die Anlage{Installation} über existierend zu bestätigen.

Wenn Sie echten{originellen} Schlüssel haben, so muss man sich natürlich vom Überspielen lossagen.

6.7 Yellow Disk

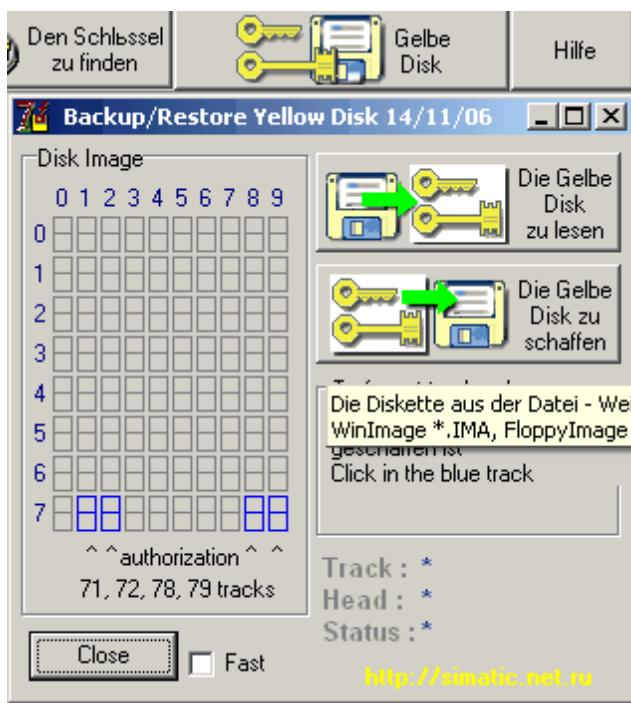

Mit Hilfe diesen Dienstprogrammes kann man die Gelbe Diskette aus den Weisen{Gestalten} einiger Typen schaffen:

[IMA](#), [IMZ*](#) - WinImage

[IMG](#) - FloppyImage

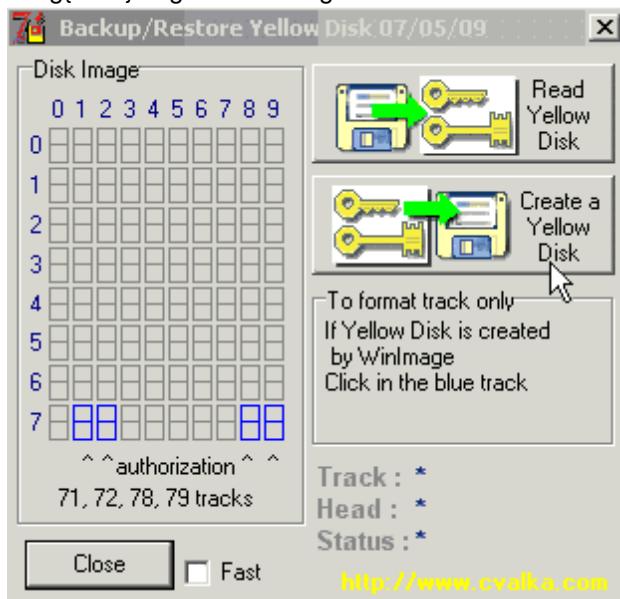

[BIN](#) - FDA (Floppy Disk Analyzator for DOS)

IMZ Die Weisen{Gestalten} im Format [IMZ](#) (WinImage) mu man in die Datei mit der Erweiterung {Ausbau} IMA vorläufig{vorher} auspacken.

Nach der Vollendung der Aufzeichnung wird die "Lizenzbahn{"Lizenzweg} aufgezeichnet sein. F r den Augenblick werden vom Siemens f r dieses Ziel{Zweck} die B hne{Weg} von 71 bis zu 79 verwendet.

Wenn Sie die Gelbe Diskette in anderem Programm (in selb WinImage oder FloppyImage) schon geschaffen haben,
Jenes k nnen{d rfen} Sie die "Lizenzbahn{"Lizenzweg}, gedr ck{getastet} auf den entsprechenden K fig{Zelle} abgesondert abgesondert aufzeichnen.

Die Richtigkeit{Regelm ssigkeit} der Bildung{Schaffung} der Diskette kann man im Programm den Manager{Gesch ftsf hrer} der Lizenen AutorsW oder ALM pr fen,
Gew hlt die Pr fung der Ganzheit eines beliebigen Schl sses.

Nach dem charakteristischen{charaktervollen} "Knirschen" des Schrittmotors der Umstellung des Kopfes kann man ber den Erfolg der Prozedur auch bestimmen.

Wenn Sie das "Knirschen" - nicht h ren werden es bedeutet die Diskette war falsch geschaffen oder es war die n tige Bahn{Weg} nicht aufgezeichnet.

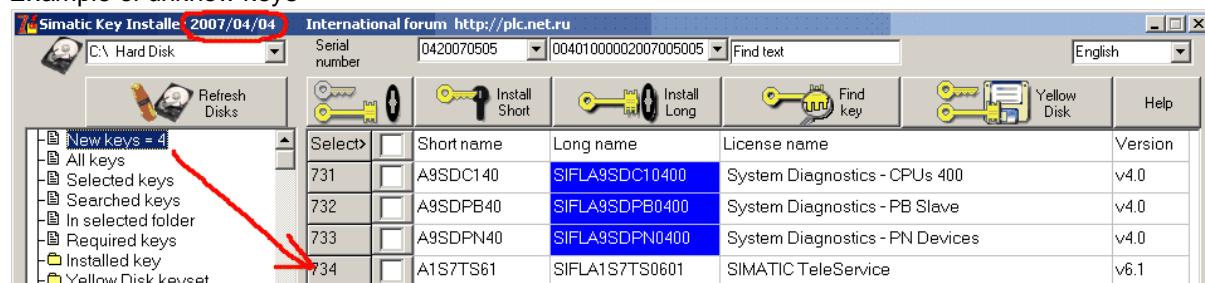

In diesem Fall können{dürfen} Sie die Bähne{Weg} von 71 bis zu 79 konsequent aufzeichnen und in die Ganzheit im Manager{Geschäftsführer} der Lizenzen pr fen.

F r das Ablesen der Firmen-Gelben Diskette in die Datei - Weise können{dürfen} Sie den Knopf " Read Yellow Disk " ausnutzen{verwenden} oder durch das Programm WinImage rechnen.

Bei dem Versuch der Lektüre{Vorlesung} der "lizenzbahn{"lizenzwegs} WinImage wird die Warnung vor dem Fehler der Lektüre{Vorlesung} ausstellen. Drücken{tasten} Sie Knopf " ignorieren " f r die Fortsetzung der Bildung{Schaffung} der Weise{Gestalt}. Sie können{dürfen} die Nummer{Zimmer} dieser Bahn{Wegs} f r die Formatierung in unserem Programm behalten.

6.8 Unknow keys

Example of unknow keys

6.9 Wie kann die Trial License deaktiviert werden

Wie kann die Trial License deaktiviert werden, wenn die Meldung erscheint, dass die Trial License abgelaufen ist, obwohl die Floating License installiert wurde?

<http://support.automation.siemens.com/WW/view/en/24200966>

Anleitung:

Die Trial License ist für eine zeitlich beschränkte Nutzung der SIMATIC Software z.B. für Tests und nach der Aktivierung dieser License ist sie für maximal 14 Tage gültig. Wenn Sie nach dem Ablauf dieser Zeit eine Lizenz für eine zeitlich unbegrenzte Nutzung (Single-, Floating- oder Upgrade-License) installieren und nach der Installation trotzdem die Meldung erhalten, dass die Trial License abgelaufen ist, empfehlen wir Ihnen, die Trial License im Ordner "AX NF ZZ" zu löschen:

Vorgehensweise zum Löschen einer Trial License:

1. Öffnen Sie in MS Windows den ALM über

- "Start > SIMATIC > License Management > Automation License Manager"

und markieren Sie mit dem Cursor das Laufwerk (z.B. "C"), auf dem Ihre Lizenzen installiert sind.

Im rechten Fenster des Automation License Managers erscheint dann die Tabelle mit den

installierten Lizenzen. Für die Ansicht der Lizenzen benötigen Sie den Dateinamen (License Key) und die 20-stellige Lizenznummer. Sollten diese Spalten noch nicht eingeblendet sein, so öffnen Sie über

- "Ansicht > Definieren..."

den Dialog "Ansicht definieren". Wählen Sie im unteren Teil dieses Dialoges im Register "Spalten" die "License Key" und die "Lizenznummer".

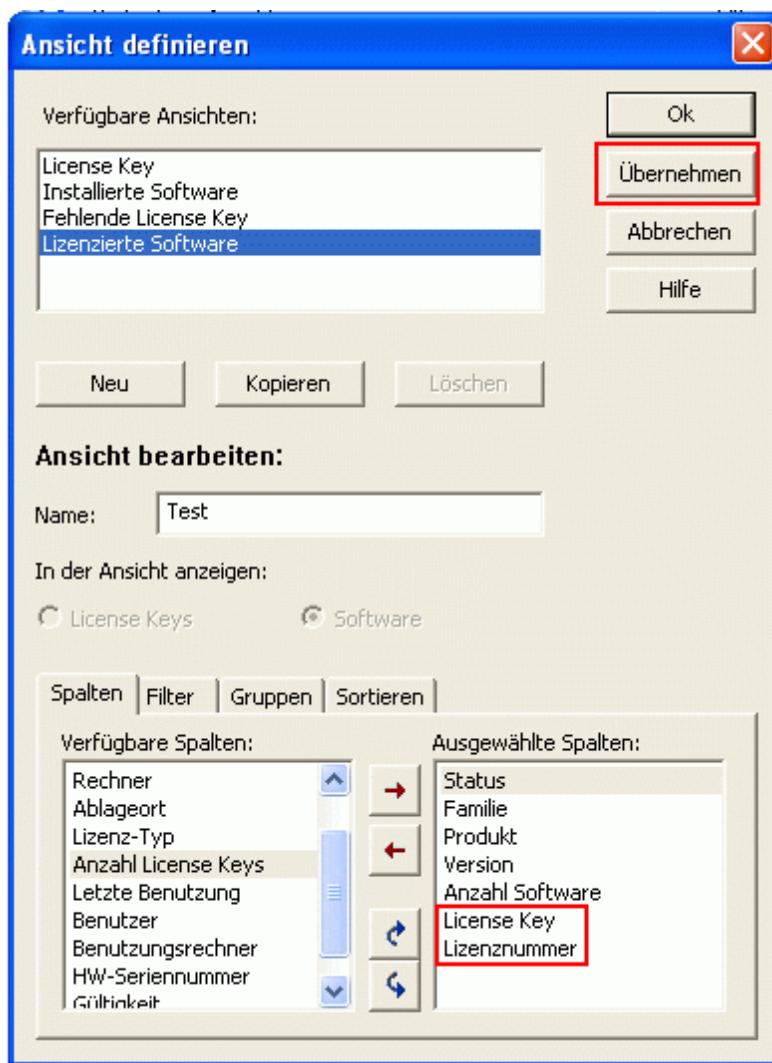

Bild 01

Tragen Sie anschließend einen Namen unter "Ansicht bearbeiten:" ein und klicken Sie auf die Schaltfläche "Übernehmen". Nach der Bestätigung mit OK erscheinen die Spalten "License Key" und "Lizenznummer" im Automation License Manager.

Markieren Sie im Explorer das Verzeichnis "AX NF ZZ" auf Ihrer Festplatte bzw. im Laufwerk "C", sodass im rechten Fensters des Explorers die Dateinamen der Lizenzen erscheinen.

Sollte das Verzeichnis "AX NF ZZ" bzw. die Dateien in diesem Verzeichnis nicht sichtbar sein, so öffnen Sie den Dialog "Extras > Ordneroptionen..." und wählen Sie das Register "Ansicht":

- deaktivieren Sie hier die Option "Geschützte Systemdateien ausblenden (empfohlen)" und
- aktivieren Sie die Option "Alle Dateien und Ordner anzeigen".

Klicken Sie anschließend auf die Schaltfläche "Übernehmen" und bestätigen Sie mit OK.

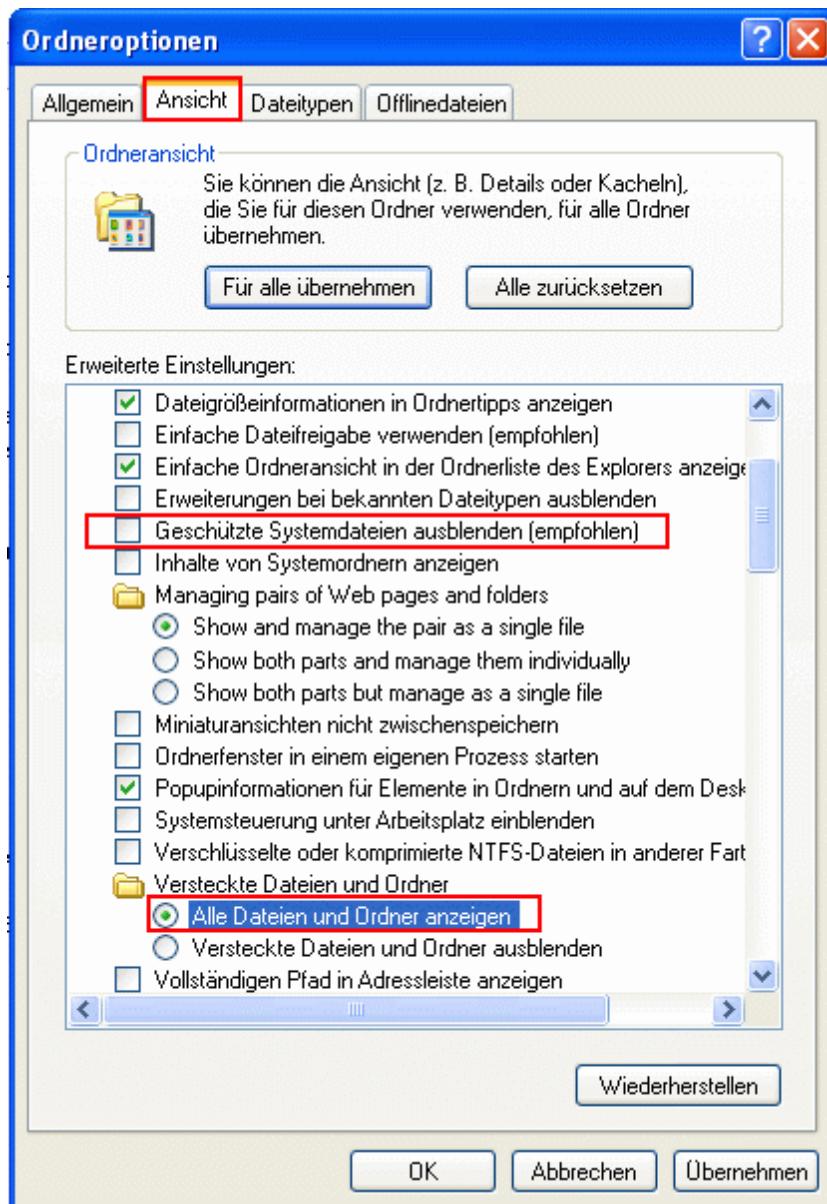

Bild 02

Das Verzeichnis "AX NF ZZ" wird dann im Explorer angezeigt.

3 Vergleichen Sie nun im Automation License Manager den Dateinamen (License Key) der Trial License mit dem Dateinamen im Ordner "AX NF ZZ". Über die eingestellte Ansicht im Automation License Manager ermitteln Sie für die zu löschen Trial License den Dateinamen (Bild 03), den Sie dann im Ordner "AX NF ZZ" finden.

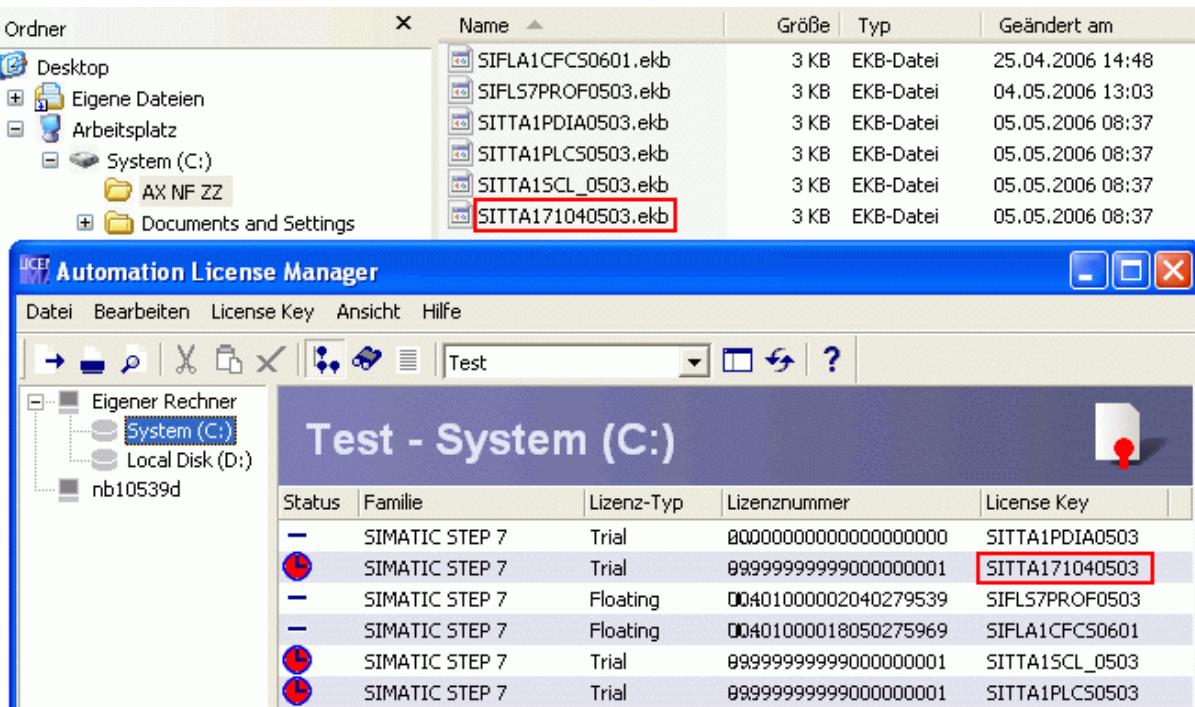

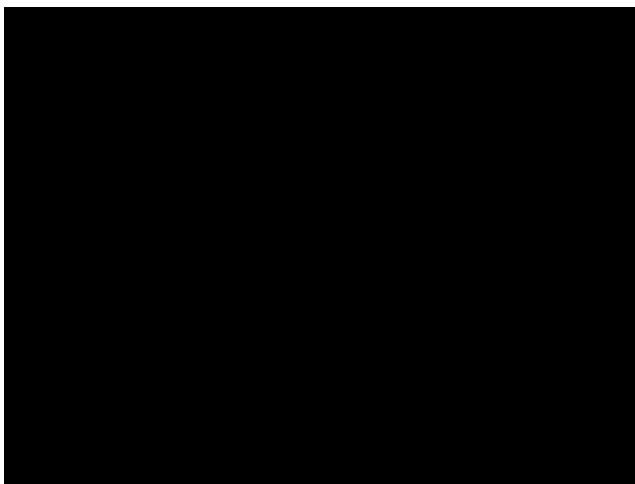

Bild 03

4 Markieren Sie die gefundene Trial License im Verzeichnis "AX NF ZZ" und klicken Sie auf die rechte Maustaste. Klicken Sie im darauf folgenden Kontextmenü auf "Löschen". Nach dem Löschen wird die oben beschriebene Meldung nicht mehr erscheinen.

6.9.1 Install Trial keys

Während der Anlage{Installation} des zeitweiligen Schlüssels in den Verzeichnissen Windows und Windows\System32 werden die Verzeichnisse attis mit einer leeren Datei geschaffen.
Der zeitweilige Schlüssel SITTA*.ekb wird in das Verzeichnis C:\AX NF ZZ aufgestellt{eingeführt}

See Remove Trial keys

6.9.2 Remove Trial keys

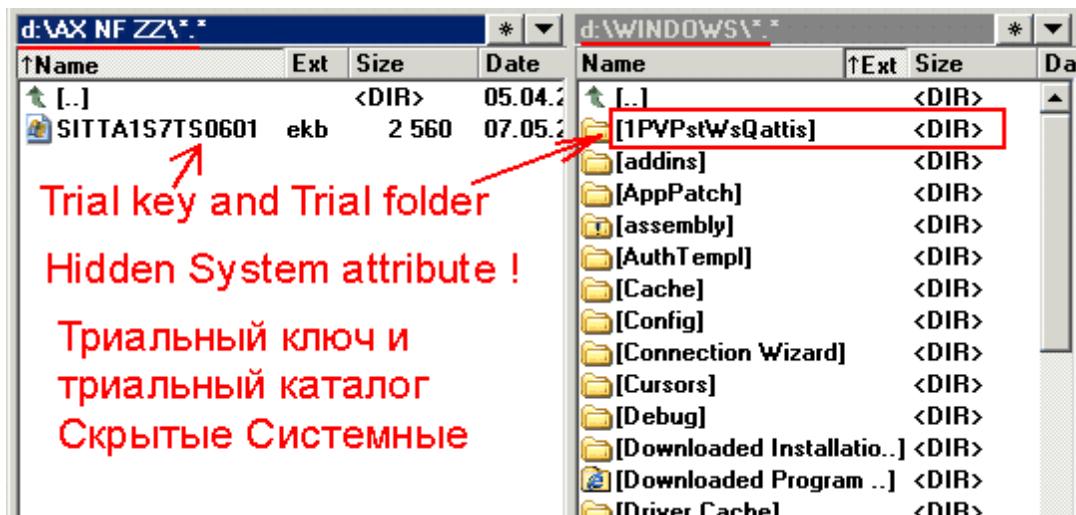

F r einige Programme kann man die zeitweiligen Schl ssel befristet von einigen Stunden bis zu dem Jahr der Arbeit aufstellen{einf hren}.

Nach dem Abschluss{Endung} des Termines{Frist} der Arbeit ist n tig es, die zeitweiligen Schl ssel und ihre Spuren zu l schen.

Es sind die Probleme bei der Arbeit der normalen Schl ssel andernfalls m glich.

Auch mu man das Verzeichnis in das Verzeichnis System32 l schen

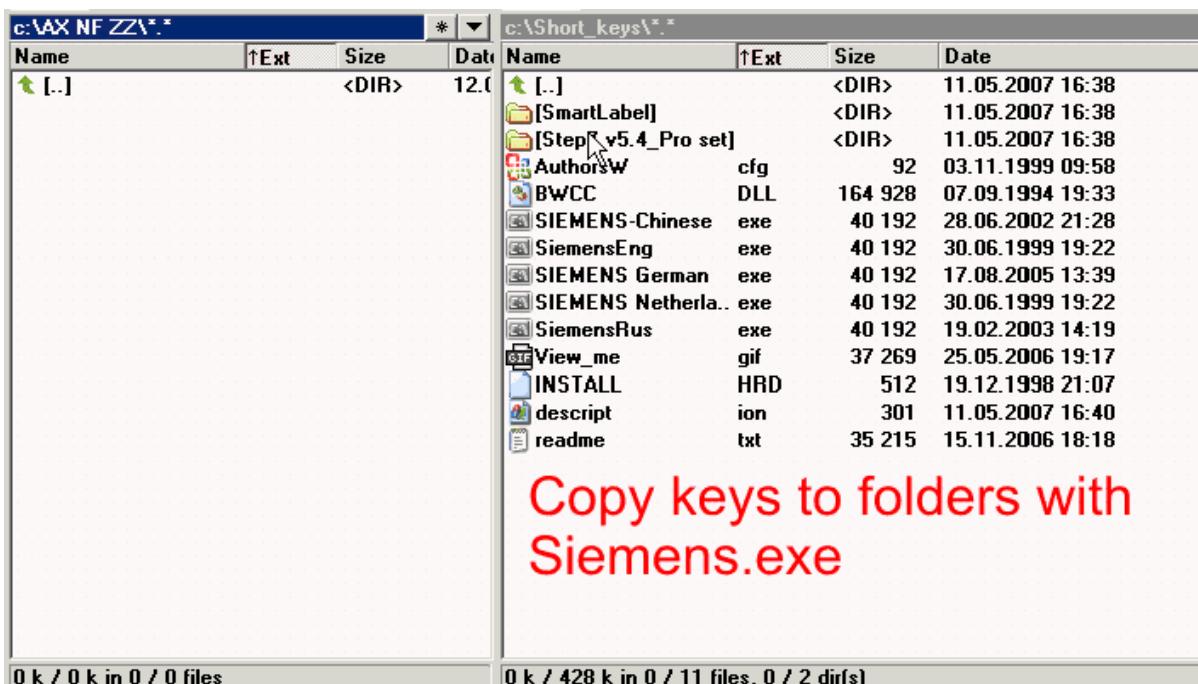

In diesem Verzeichnis befindet sich die leere Datei.

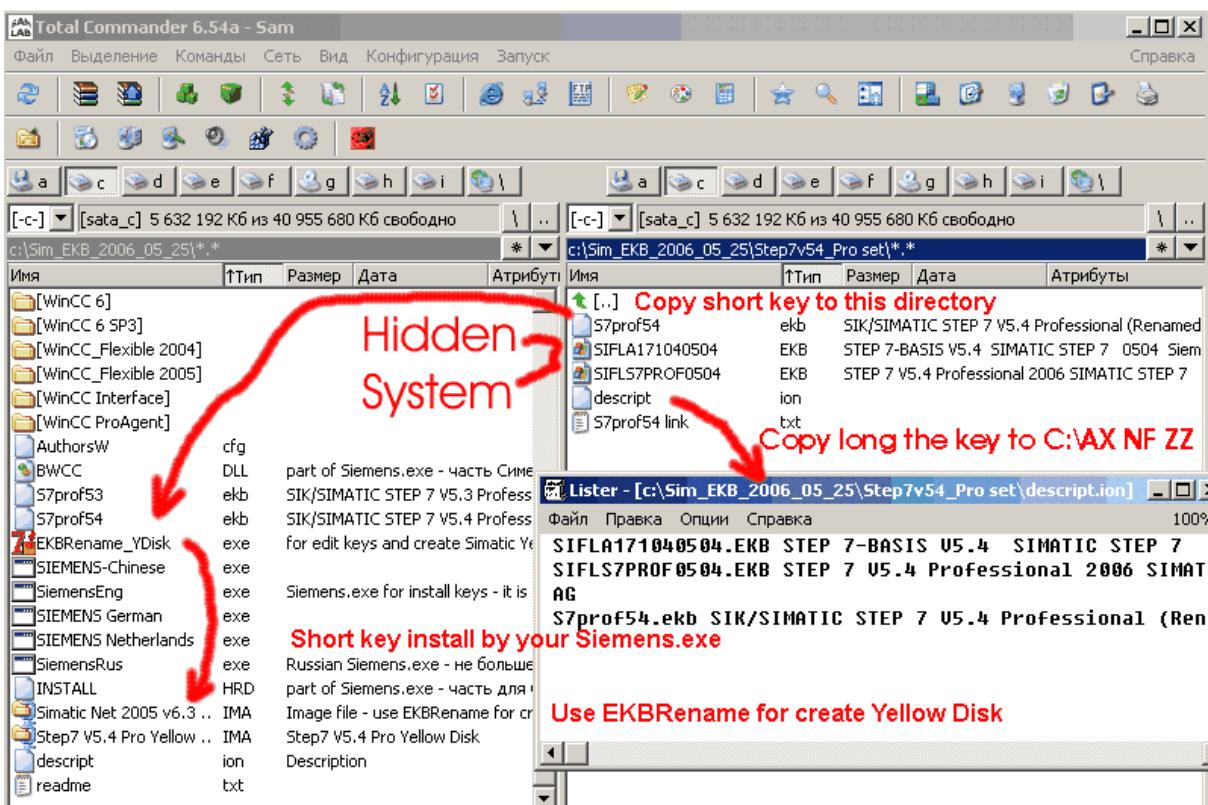

6.10 Siemens.exe

F r die Anlage{Installation} der kurzen Schl ssel aus dem Satz kann man das Programm Siemens_exe ausnutzen{verwenden}.

Kopieren Sie in das Verzeichnis mit dem Programm die geforderten Schl ssel (nicht mehr als 100 St cke einmalig) und starten Sie das Programm.

**Copy keys to folders with
Siemens.exe**

Wenn es im Verzeichnis mit Siemens_exe keine Schlüssel gibt, so wird bei dem Start die nächste Mitteilung herausgeführt sein

6.11 Lizenz-Schlüssel auf einem PC ohne Diskettenlaufwerk zu transferieren

Welche Möglichkeiten gibt es, um Lizenz-Schlüssel auf einem PC ohne Diskettenlaufwerk zu transferieren?

Konfigurationshinweise:

Seit einiger Zeit werden auch Rechner ohne Diskettenlaufwerk hergestellt. Für die Installation von einigen Automatisierungs-Softwareprodukten ist allerdings ein Diskettenlaufwerk für die Installation der auf Diskette ausgelieferten Lizenz-Schlüssel erforderlich.

Mit dem Automation License Manager können, bei einem PC ohne Diskettenlaufwerk, die Lizenzen über die folgenden Wege installiert werden:

| Transportmedium | Lizenz-Schlüssel Typ | |
|--|---|---|
| | Autorisierung (z.B. STEP 7 V5.2) | License-Key (z.B. Floating License Key STEP 7 V5.3) |
| Externes Diskettenlaufwerk mit USB-Schnittstelle | X | X |
| USB Stick als Transfermedium von einem Rechner mit Diskettenlaufwerk zu einem Rechner ohne Diskettenlaufwerk | -- | X |
| Zweitrechner mit Diskettenlaufwerk am Firmennetz und Transfer über das Netzwerk | X ¹⁾ | X ¹⁾ |
| Zweitrechner mit Diskettenlaufwerk und Offlinetransfer (siehe Hilfe des Automation License Managers) | X ¹⁾ | X ¹⁾ |

¹⁾ Der Automation License Manager muss auch auf beiden Rechnern installiert sein.

Hinweis:

Einen License Key erkennen Sie im Automation License Manager an der zwanzigstelligen Lizenznummer.

Eine Autorisierung besitzt eine zehnstelligen Lizenznummer.

Top Level Intro

VII

7 Portuguese

Como ele em uma etapa do desenvolvimento algumas funções não podem ser completamente acessíveis ou ser executadas com falhas

Registro direto em um disco rígido e trabalhos de memória de Relâmpago. Na memória de Relâmpago chaves longas - a lista alguns minutos introduzem o nome só

É necessário acrescentar o registro direto de chaves em um disquete

É necessário corrigir para a lista de chaves

Em anos distantes, distantes Siemens cobrou o desenvolvimento da proteção dos produtos de software à corporação StopCopy. Isto desenvolveu a proteção com base nos arquivos-chave colocados na imagem especial ao disquete Amarelo formatado - daqui e o nome.

Assim afirmado, aquela proteção até isto é fiável, isto "será fiável conservar os seus investimentos".

O grande ser humano agradece peritos StopCopy pela operação feita no campo da criação de uma atmosfera da disponibilidade de produtos de Siemens a largas massas de programadores. Fez programa e soluções de hardware muito popular e exigido no mundo inteiro, que permitiu competir apropriadamente a outros fabricantes da automação até no seu território. Tomar para um exemplo dos EUA com e eles B&R e General Elétrico...

E consequentemente realmente salvou em cima dos investimentos aninhados. De fato o ferro igualmente deve ser comprado todos de Siemens.

O programa dado é destinado para a instalação de chaves de licenças em caso de, quando:

Lá ocorreu "um dia chuvoso do programador" - o sistema tem flied em conjunto com todas as autorizações, e trabalhar é necessário, até em áreas remotas;

Quando houve um novo produto quente, e as cabeças ainda não dão o dinheiro para ele ;

Simplesmente você deseja estudar para o desenvolvimento geral .

É desenvolvido com relação ao lançamento da versão ALM 3.0 - a Autorização Autoriza o Gerente depois quem, assim chamado, "fastcopy" chaves longas da autorização deixaram de trabalhar por causa do que não ignoram por este Authorizator.

As chaves de "Fastcopy" podem ser copiadas simplesmente no diretório de licenças C: \AX NF ZZ. Eles usaram "o buraco" auxiliar no sistema da autorização ALM <v3.0 que foram cobertos com a produção Step7 v5.4 SP1.

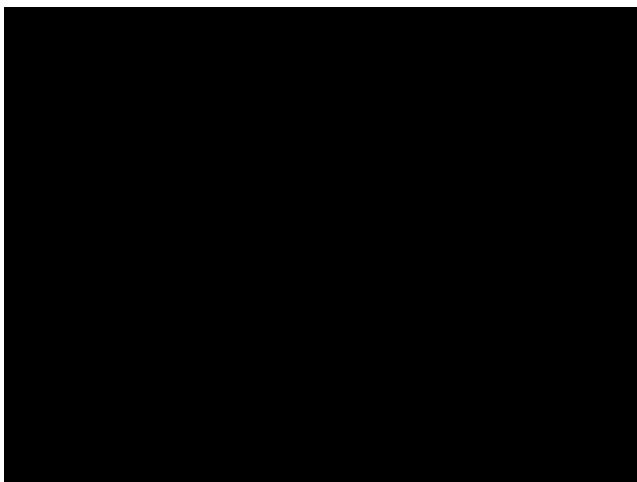

Também codificação adicional das chaves, as chaves, por isso, novas foram aplicadas não são visíveis em ALM v2.2.

As novas chaves são incorretamente expostas em velhas versões de programas EKB_Rename, EKB_Backup e EKB_Install <v.2007.03.03.

Não chamo para usar um software de Siemens nos objetivos mercenários. Os programas dos objetivos industriais basicamente devem ser penhorados em estimativas de projetos e ser ganhados no dinheiro do cliente.

Muito poucas pessoas virão para uma cabeça para pôr ï deixado do cliente PCS7 com as chaves esquerdas e sem o certificado em grande produção.

E para o uso de casa provavelmente não há nada o pior espalhafato com disquetes de licença. Houve casos quando o desgastado a licença Amarela firme começou a ser chovida para Intourist com a Senhorita de chaves em lugares remotos distantes sem telefone e a Internet.

7.1 Introducion

Em uma janela do programa são localizados:

Árvore com a lista de programas e a tabela com a lista de chaves

Campo de uma conclusão de comentários e a informação sobre ajuda

Linha de uma escolha de língua da interface

Linha de uma escolha de um disco de instalação de chaves e o botão de atualização da lista de discos

Linhas de entrada de números de série

Linha e o botão de pesquisa de uma chave pela palavra de jogo

O botão de uma chamada de uma janela de trabalho com imagens de disquetes Amarelos

Campo de uma escolha de preferências de tipo da licença em instalação

Botões de instalação curta, muito tempo ou todas as chaves escolhidas

Selecione tipos-chave para instalaram

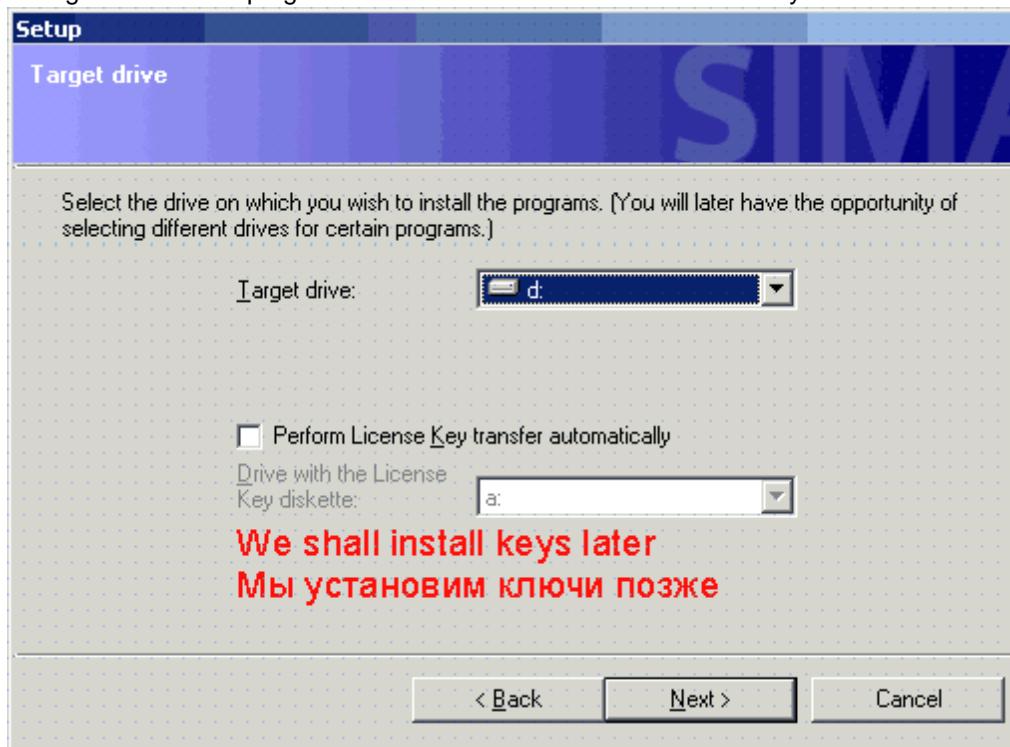

The screenshot shows the Simatic Key Installer application window. On the left is a tree view of installed programs. The main area displays a table of license keys with columns for Short name, Long name, License name, and Version. A dropdown menu shows language options: English, Russian, German, French, Spanish, Italian, Portuguese, and Chinese. At the bottom, there are settings for license type (Float in the network, Single work place, Rental), key type (Normal or FastCopy), and a note about the AUTOMATION LICENSE MANAGER.

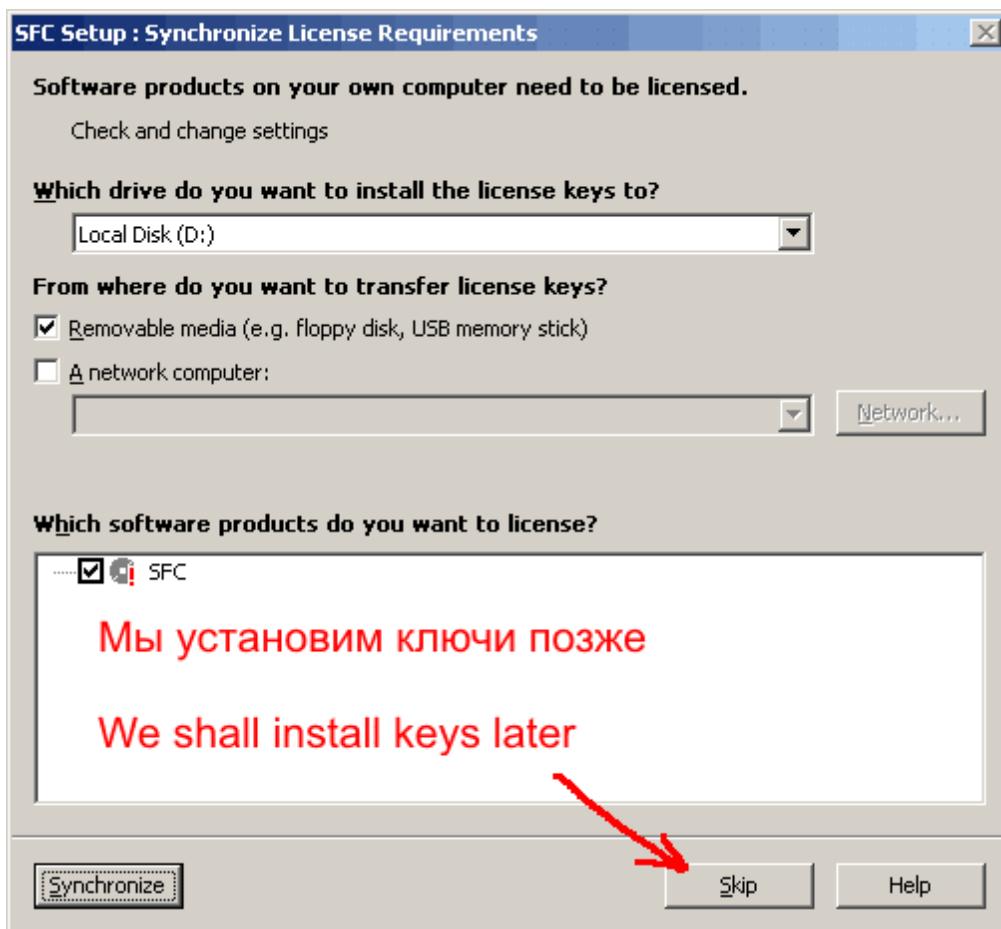

| Short name | Long name | License name | |
|------------|------------------------|--|-------|
| 626 | SIFCY9WTGX06023 | WINCC-V6 Arch 30000 ATg | v99.9 |
| 1859 | SIFLWCWN069999 | WinCC WebNavigator (150) for RT Professional | v99.9 |
| 1982 | SIFCYWUXMN99994 | WinCC WebUX Monitor (50) | v99.9 |
| 1987 | SIFCYWUXOP99994 | WinCC WebUX Operate (50) | v99.9 |
| 1436 | SIFCYA1BUN99998 | BATCH 1000 UNITS | v99.9 |

| 2722 | SIFLA1LOGS0106 | Logon - Logon Service 1.6 | v1.6 |
| 1430 | SIFLA1STOV0103 | StoragePlus-Viewer | v1.3 |

Total keys = 2733 Selected keys = 0 It is installed keys = 153 For testing purposes only --- See more info in Help file

7.2 We shall install keys later

During installation of programs Simatic it is refused installation of keys.

7.3 Número de Licença

Número de Licença

O número de licença é o identificador único de uma licença.

Há 2 linhas da entrada de números de série, assim chamado ID KHE, normalmente especificadas em disquetes de licença amarelos e certificados aplicados.

| | | |
|---------------|------------|----------------------|
| Serial number | 0420061231 | 00401000002006012031 |
|---------------|------------|----------------------|

10 número simbólico é destinado para chaves curtas.

20 número simbólico é destinado para chaves longas.

Você não pode modificar esses números, e dá-lo para fazer ao programa ou selecione um dos números de série disponíveis de chaves instaladas na caixa de lista caio.

| | |
|---------------|------------|
| Serial number | 0420070112 |
| | 0123456789 |
| | 0420061227 |
| | 0420061228 |
| | 0420070112 |

7.4 Required keys

A lista de chaves necessárias dos programas instalados.

Da etiqueta as chaves instalam só um com a quantidade necessária de etiquetas (um exemplo de CFC na figura).

| | | | | |
|--------------------|-----|--------------------------|----------|---|
| New keys = 5 | | | | |
| All keys | 481 | <input type="checkbox"/> | A1CFC761 | SIFLA1CFC70601 CFC V6.1 (2000) |
| Selected keys | 480 | <input type="checkbox"/> | A1CFC961 | SIFLA1CFC90601 CFC V6.1 (3000) |
| Searched keys | 479 | <input type="checkbox"/> | A1CFCD61 | SIFLA1CFCD0601 CFC V6.1 (5000) |
| In selected folder | 477 | <input type="checkbox"/> | A1CFCS61 | SIFLA1CFCS0601 CFC V6.1 STEP 7 - Option |
| Required keys | 478 | <input type="checkbox"/> | A1CFCU61 | SIFLA1CFCU0601 CFC Unlimited Tags |
| Installed key | | | | |
| Yellow Disk keyset | | | | |

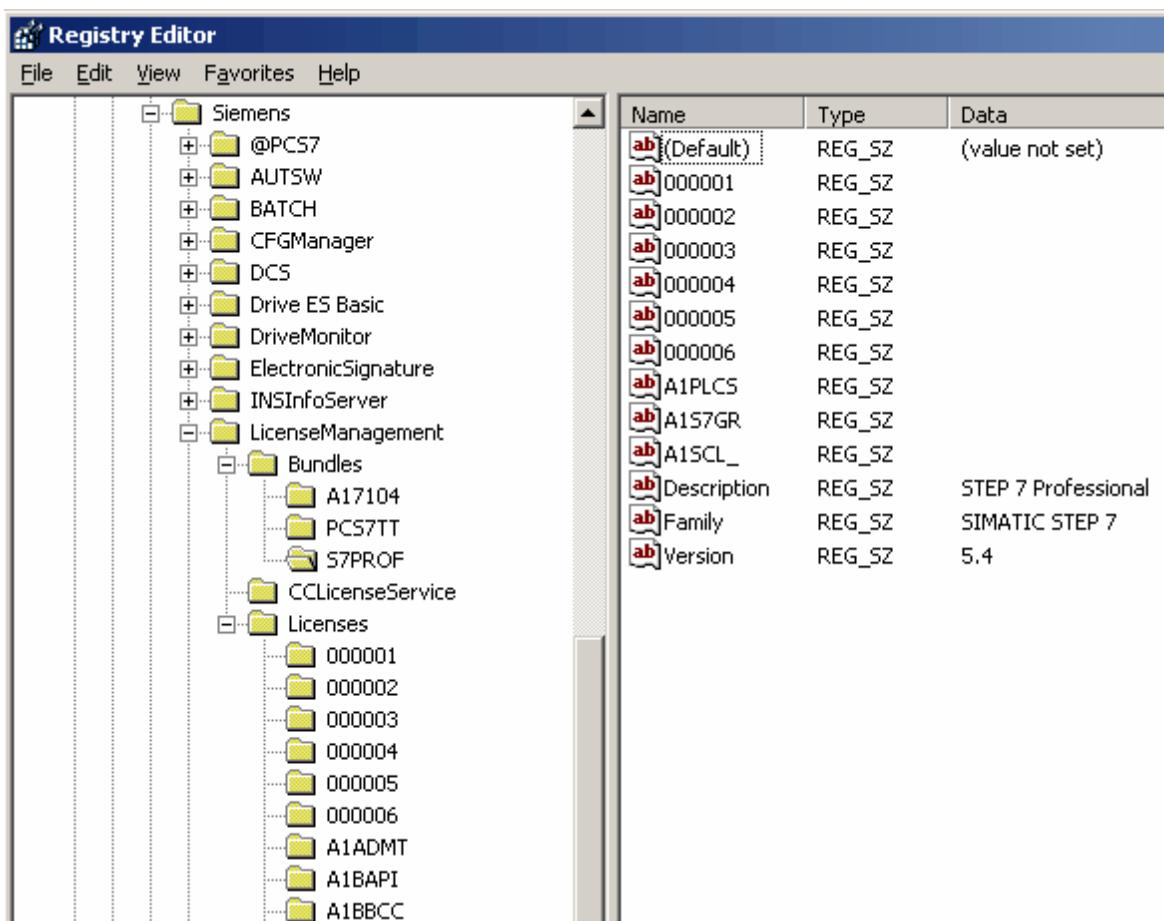

Você pode especificar nomes de chaves ausentes no gerente de licenças ALM

S7PROF*-chave complexo da versão STEP7 profissional pode ser usado em vez de 4 chaves separadas A17104 *, A1PLC_ *, A1S7GR *, A1SCL_ *.

PCS7TT*-chave do programa PCS7 pode ser usado em vez do jogo completo inteiro de chaves.

Você pode especificar nomes de faltar a chaves adicionais no gerente de licenças ALM

7.5 Instalação de Chaves de Licença

Você pode estabelecer {instalam} uma chave ou o grupo das chaves escolhidas nos discos flexíveis, rígidos especificados ou USB externo um disco (pau de Relâmpago ou Flashcard em cardreader). Assim há algumas variantes.

É possível escolher uma de variantes da instalação chaves escolhidas:

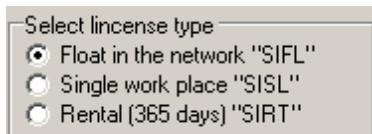

1. Todos - curto e longo
2. Só muito tempo
3. Só curto
4. Instalação com preferência:

- São instalados muito tempo e se não estiver presente muito tempo para o tipo escolhido da licença a variante curta de uma chave é instalada.
- São instalados curtos e se não estiver presente curto para o tipo escolhido da licença a variante longa de uma chave é instalada.

Selecione o tipo de chaves

Assim no botão da instalação geral o quadro segundo uma escolha varia.

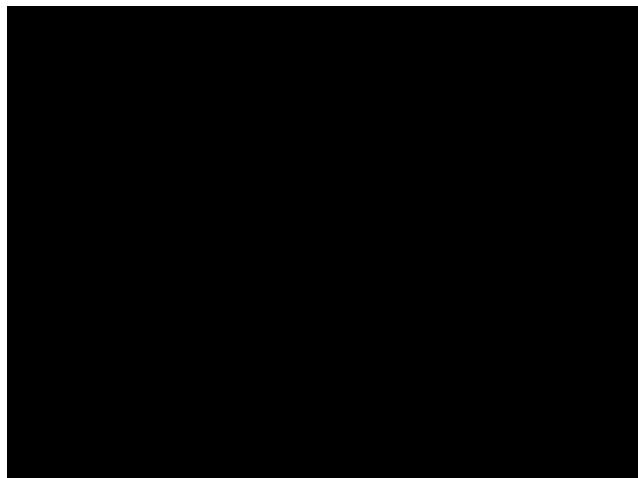

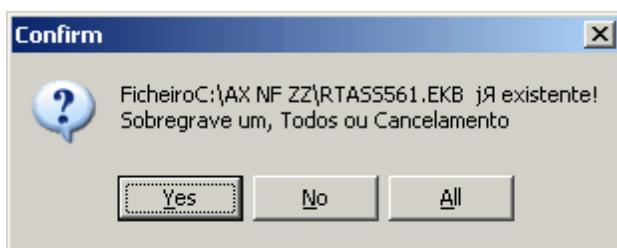

Se você une conecta ou desconecta transportadoras substituíveis durante o trabalho do programa para atualizar a lista de transportadoras prensa {de portadores} o botão "para atualizar a lista de discos". A transportadora novamente unida{conectada} aparecerá na lista.

Depois que a correspondência de instalação {que encontra} os nomes das chaves será pintada

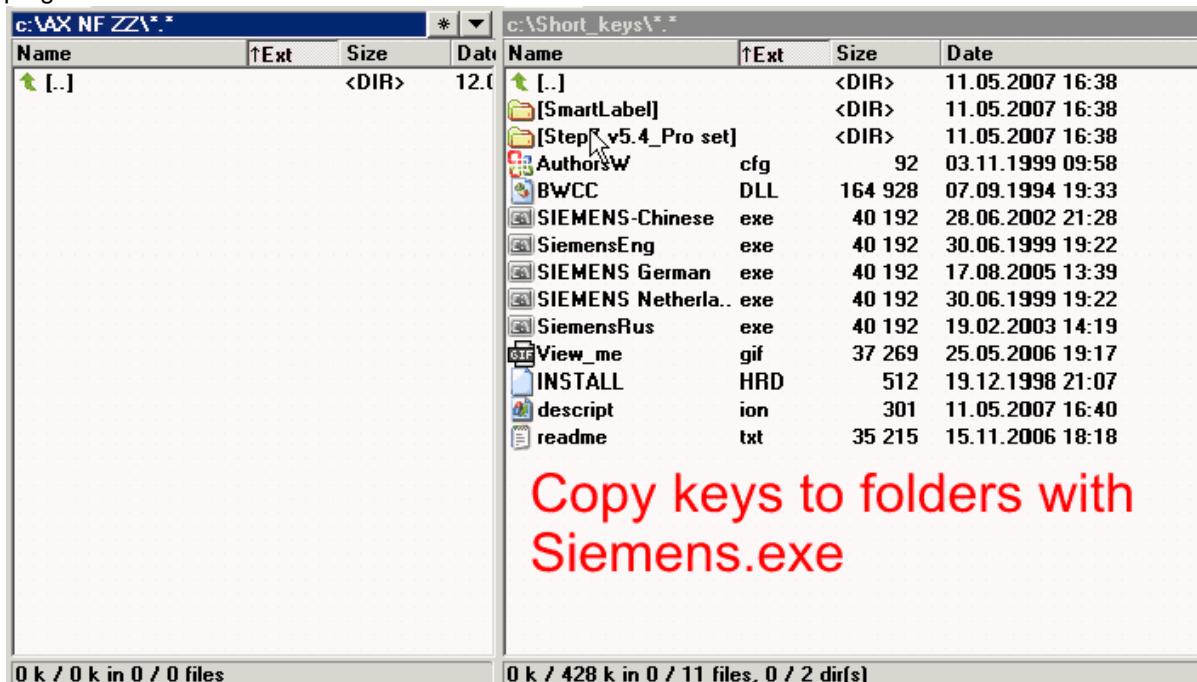

| | | | |
|-------------------------------------|----------|----------------|--------------------------|
| <input checked="" type="checkbox"/> | S7PROF54 | SIFLS7PROF0504 | STEP 7 V5.4 Professional |
| <input checked="" type="checkbox"/> | S7PROF53 | SIFLS7PROF0503 | STEP 7 V5.3 Professional |

Se a chave já for instalada em um disco haverá uma janela com o pedido para confirmar a instalação em cima de disponível.

7.6 Siemens.exe

For installation of short keys from a set it is possible to use program Siemens.exe.
Copy in the catalogue with the program demanded keys (no more than 100 keys lumpsum) and start the program.

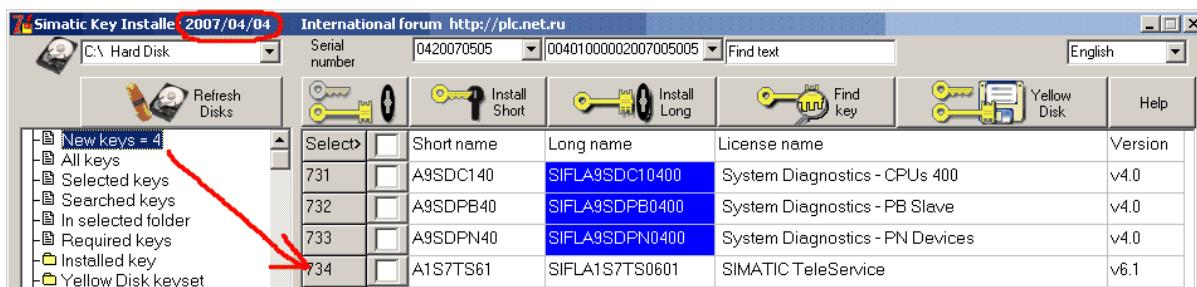

If in the catalogue with Siemens_exe there are no keys at start the following message will be show.

7.7 Nao conhece chaves

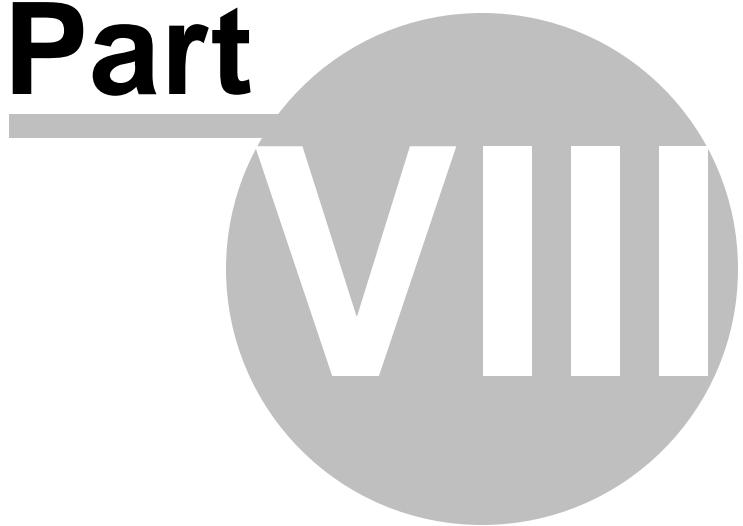

O exemplo de não conhece chaves

Calculating the units for the BATCH station

License key for BATCH station

A defined number of units can be operated and monitored with this license key.

The number of units that can be processed depends on the utilization of the BATCH server.

Example: BATCH Server (20)

The license key for BATCH server is adequate for configuring up to 20 units.

Requirement

? SIMATIC Manager is open.

Procedure

1. In the SIMATIC Manager, select the multiproject/project for which you want to calculate the number of configured units.
2. Select the menu command Options > SIMATIC BATCH..
.The "Configure BATCH Process Cell" dialog box opens.
3. Select the "BATCH Process Cell" folder in the tree view.
4. In the "Process Cell" section, click "Check validity".
5. In the "Log" group, enable the "Validate" check box.
6. Click the "Display" button.

Result

A log file opens in the Internet Explorer.

? If the "Check validity" or "Compile" function shows an error in the configuration, you will need to correct the error and calculate the process objects again.

? If the configuration is free of errors, you will find the number of units configured in the multiproject/project in the table under the heading "Units".

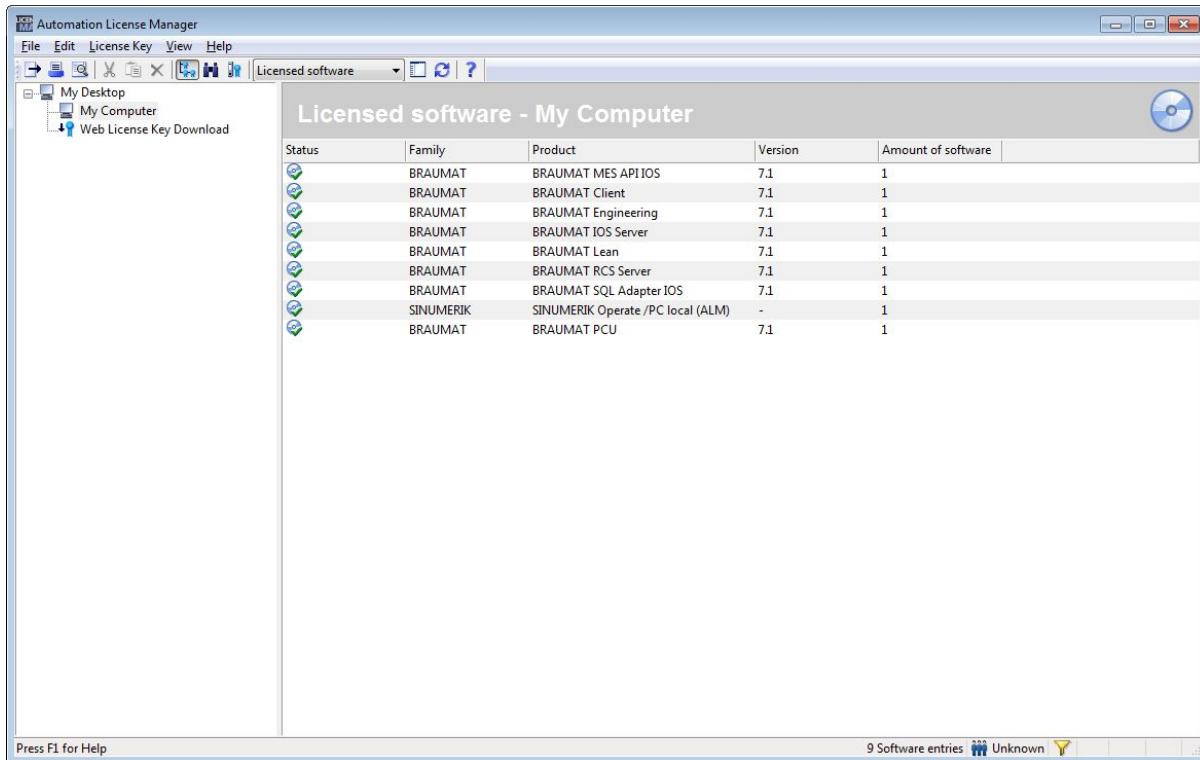

? You can calculate the number of configurable units based on the license keys through the Automation License Manager.

Example of the layout of a log file:

| Plant | Units | Log | Date, time | Result |
|---------------------|-------|--------------|--------------|----------------------|
| <process cell name> | 11 | Plausibility | <date, time> | 0 errors, 0 warnings |
| No. | ID | Error | Warning | Remedy |

9.14 Modular Safety System ES 2008

<http://support.automation.siemens.com/WW/view/en/30319329>

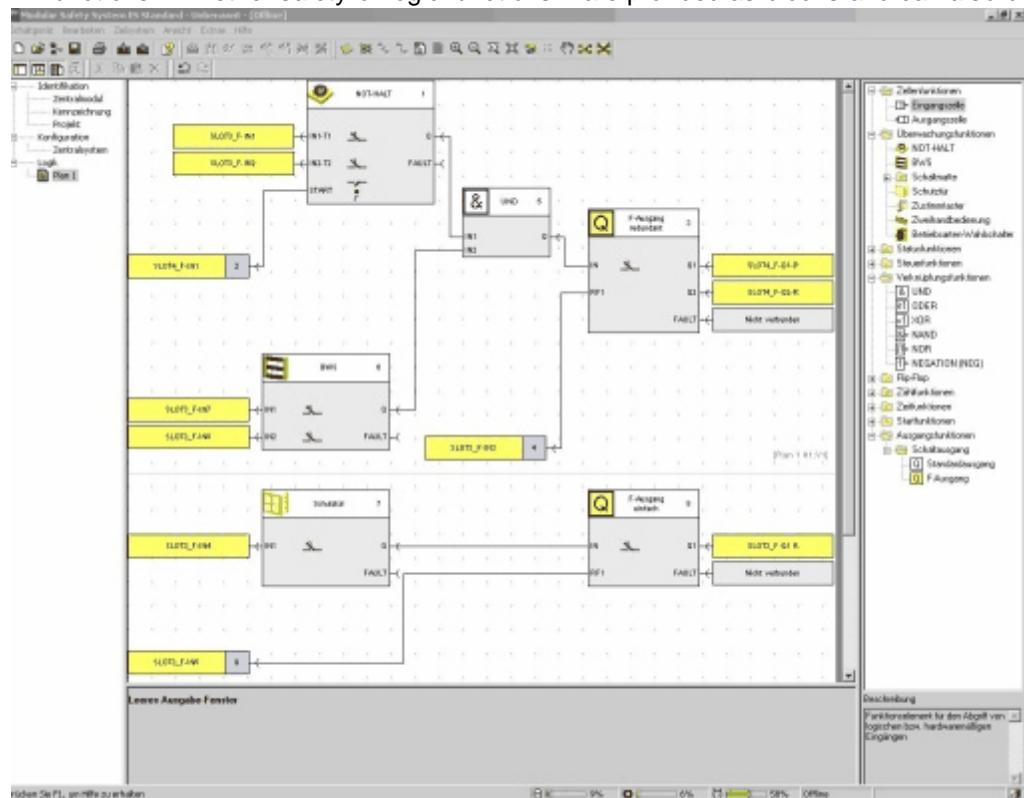

Modular Safety System ES is the engineering software package for configuration, start-up and diagnostics of the 3RK3 modular safety system.

The software combines the configuring of the hardware, the programming of the safety functions and the testing and diagnostics of the safety system.

The parameterization software forms part of the Modular Safety System and replaces laborious wiring of the individual functions by fast and easy parameterization.

All function elements can be placed via drag & drop.

All functions – whether safety or logic functions – are provided as blocks and can also be interlinked.

| 823 | MSTESB40 | SIFLMSTESB0400 | Motor Starter ES 2007 Basic | v4.0 |

Motor Starter ES 2007 Premium

for the connection to one or several motor starters via PROFIBUS DP or PROFINET or directly on the device via the system interface.

Motor Starter ES 2007 Standard

for direct connection to the motor starters via the system interface on the device, for parameterization and diagnostics.

Motor Starter ES 2007 Basic

for direct connection to the motor starters via the system interface on the device.

9.16 Net

Products without installed license key are in “Trial Mode“ and the lack of a license will be indicated during use.

<http://support.automation.siemens.com/WW/view/en/24290429>

With the complete implementation of the A&D licensing concept it became necessary with some SIMATIC NET PC software products of Edition 2006 to distribute the license keys according to function.

For example, with SOFTNET S7 IE Edition 2006 you get three license keys:

- One SOFTNET S7 Basic Key [SIFLNSIEPG0604](#) for PG/OP communication, i.e. communication is enabled in general.
- One SOFTNET S7 Lean Key [SIFLNSIESL0604](#) for the use of 1 to 8 connections via Industrial Ethernet.
- One SOFTNET S7 Powerpack Key [SIFLNSIESE0604](#) for the use more than 8 connections (9 to 64) via Industrial Ethernet.

Other SIMATIC NET PC software products that have more than one License Key are:

- S7 REDCONNECT, here the S7 1613 Key [SIFLNHIES70604](#) and the S7 REDCONNECT Key [SIFLNIERCN0604](#) are supplied.

- Upgrade packages for SIMATIC NET PC software products of Edition 2006, here an Upgrade Key plus up to two License Keys are supplied depending on the product.

Note:

The SIMATIC NET PC software appropriate for the licenses and the Automation License Manager (ALM) supplied must be installed to be able to install and use the license keys. Please note that all the license keys of a SIMATIC NET PC software product must be installed to be able to use the full function range of the software, because the new license keys now enable those features that you have procured as a SIMATIC NET PC software product without any overlapping.

9.16.6 Which license do you need for S7 REDCONNECT?

Which license do you need for S7 REDCONNECT?

<http://support.automation.siemens.com/WW/view/en/20710190>

| Software package | Description | |
|-------------------------|---|--|
| S7 REDCONNECT | Contains the functions of the software package S7-1613 plus redundant communication via S7 connections. Available licenses: * SIMATIC NET OPC server * Industrial Ethernet S7-1613 * Industrial Ethernet S7 REDCONNECT | SIFL NHIE S707 01 SIFL NIER CN0 701 |
| S7 REDCONNECT upgrade | Contains the functions of the software package S7-1613 plus redundant communication via S7 connections to the upgrade of an earlier S7 REDCONNECT license. Available licenses: * SIMATIC NET OPC server * Industrial Ethernet S7-1613 * Industrial Ethernet S7 REDCONNECT | |
| POWERPACK S7 REDCONNECT | Extension of the S7-1613 license to S7 REDCONNECT for using the redundant communication via S7 connections. Available licenses: * Industrial Ethernet S7 REDCONNECT | SIFL NIER CN0 701 |

Example:

You have a SIMATIC PC with one CP1613 and the "Industrial Ethernet S7-1613" license.

You need a second CP1613 and the "POWERPACK S7 REDCONNECT" software package to be able to

operate this PC properly with an H system in a redundant network (redundant system bus).

9.20 PCS7

Brief Overview of PCS 7

Description

PCS 7 is a process control system with many automatic functions to assist you during configuration.

It enables you to create a project fast and conveniently.

You will get to know some of these automatic functions in this Getting Started.

At the same time, PCS 7 provides the advanced user many options for creating individual, project-specific solutions customized to the requirements at hand.

These individual solutions are, of course, not part of this Getting Started – you can find additional about these in the configuration manuals once you are familiar with the basic functionality

SIMATIC PCS 7 is the future-proof process control system used in the "Totally Integrated Automation" concept by Siemens.

- Based on robust, industrial standard SIMATIC hardware and software components
- Modern, decentralized client/server architecture
- Simple and quick system expansion and optimization in-process
- Scalable from a small laboratory system to networks of plants with 60,000 measuring points
- For all applications: Continuous and batch applications
- For all industries: process, production and hybrid sectors
- Efficient, plant-wide engineering
- Flexible and simple integration of PROFIBUS-based field devices and drives
- Homogeneously integrated safety technology, certified by the T V (English Technical Inspectorate)
- Openness at all levels
- Increased availability through redundancy at all levels

- Modular structured and scalable batch system, SIMATIC BATCH
- Flexible route control system, SIMATIC Route Control
- 21 CFR part 11 compliance

PCS7 v7.0 include:

9.20.3.1 PCS 7 V7.0 licensing model

SIMATIC PCS 7 V7.0 licensing model

With the introduction of SIMATIC PCS 7 V7.0, the licensing of ES, OS and AS has also been changed. The aim of the new licensing for ES, OS and AS is:

Simplification and price reduction for the engineering, and

Harmonization of the invoicing unit

The invoicing unit now used for OS (previously variables) and AS (previously unit paper license) will be the process object (PO), as already used with ES, i.e. all blocks for operator input and control. The prices will in future mainly be based on the process objects of the AS and OS runtime systems. In principle, there are no more quantity restrictions with pure engineering.

OS licensing changes

Instead of variables, process objects will now be counted and invoiced with the OS. In addition, the sum of variables used by the POs will be checked, whereby on the average up to 50 variables are permitted per PO. All variables not associated with blocks for operator input and control, e.g. manual variables or external variables created by the system, will be converted to process objects with a divisor of 25 variables/PO.

AS licensing changes

A volume-dependent AS runtime license has been newly introduced. As is the case with the OS, each block for operator input and control (process object) running on an AS will be counted and invoiced. One PO will be counted for one SFC.

In view of the fact that the AS at present cannot store and check any licenses, license administration will be done by the ES, which will calculate the no. of process objects used upon downloading. The AS runtime license is designed as “Count Relevant License”, i.e. it can be expanded as required with staged licenses for 100, 1 000 or 10 000 POs. Additional process objects are simply added to existing ones.

| | |
|---------------------|--|
| SIFCYMAINR07004.EKB | Maintenance RT Count Relevant : 100 |
|---------------------|--|

In order to ensure a smooth introduction of the new AS runtime licenses, license checks on the system side will be discontinued for a limited transition period. In preparation for the activation of

license checks we recommend that you keep licenses with a sufficient no. of process objects on the engineering station, which is normally used for loading of the automation systems.

Existing AS runtime license documents (e.g. "SIMATIC PCS 7, SOFTWARE RUNTIME LICENSE LIBRARY BLOCKS") can be converted to new AS runtime licenses (100 POs) within one year. Detailed information on this topic will be published soon.

ES licensing changes

Depending on its application, an engineering station is either configurable as combined ES/OS station for small applications, or as classical engineering station not suitable as operator system for productive operation.

Classical engineering station with an unlimited no. of process objects (PO unlimited) in three versions:

AS/OS: for AS and OS Engineering

OS: only for OS Engineering

AS: only for AS Engineering

With the OS and AS/OS versions the OS configuration can be checked in an OS test mode limited to 2 hours. This OS test mode is not suitable for productive operation. When the two hours have elapsed, the ES will automatically switch to demo mode. The AS/OS versions is particularly attractive, due to the inclusion of an AS runtime license for 600 POs.

Note: If the ES is also used for WinCC projects (SCADA engineering), variables will be counted as before. For such projects the ES must be additionally licensed with variables. These are subject to volume restrictions, as before.

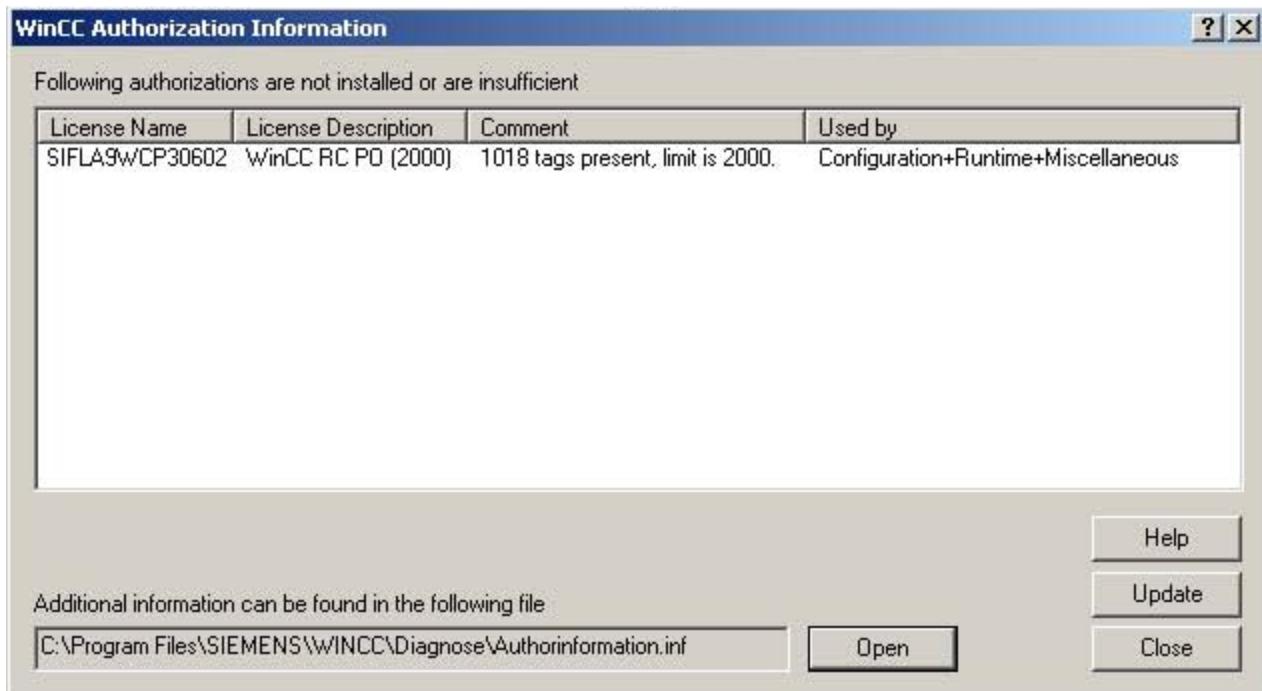

Combined ES/OS station for small applications

In order to support compact process control systems, we are offering three additional ES/OS combinations with 250, 1 000 and 2 000 POs with volume restrictions.

These "All-in-one Licenses" contain runtime licenses for AS and OS in suitable volume, in addition to the engineering licenses.

PowerPacks from 250 to 1 000 POs, from 1 000 to 2 000 POs and from 2 000 POs to PO unlimited enable further volume expansion.

9.20.3.2 Configurable size of a PCS 7

Selecting the Correct License Keys/Authorizations

The configurable size of a PCS 7 system can be scaled using the number of process objects (PO).

A process object (PO) is a process tag that is mapped onto a CFC chart.
A process object is therefore a functional unit of a process-oriented system.

- The software product licenses for engineering stations, operator stations and BATCH stations are therefore offered for a varying number of configurable process objects (PO). You can increase this number at any time with additional power packs.
- The licenses for a Route Control station are based on the number of activated routes (material transport) in process mode.
- The licenses for SIMATIC PDM are offered for a various number of configurable devices.

Note

Hereinafter, we use the term license key even for products that still use the older authorizations.

| Component of Process Control System | Licenses increments | | Remarks |
|--|--|------------------|--|
| Engineering system (ES) Engineering | Max. PO: <input type="checkbox"/> 250 <input type="checkbox"/> 1000 <input type="checkbox"/> 2000 <input type="checkbox"/> Unlimited | | Limits the sum of all process objects on the ES |

9.28 SIMOCODE ES

SIMOCODE ES is the central software for parameterization, configuration and diagnostics of SIMOCODE pro. Two versions are offered:

SIMOCODE ES Professional for connection to one or more devices via PROFIBUS DP or direct on the device via the system interface

SIMOCODE ES Smart for direct connection to SIMOCODE pro via the system interface on the device

With SIMOCODE ES Professional, SIMOCODE pro is parameterized and diagnosed either direct on the device or from a central location over PROFIBUS DP.

By displaying all operating, service and diagnostics data, SIMOCODE ES Professional provides meaningful information and thus helps to prevent faults or to quickly locate and correct them. The option of online parameterization during operation avoids additional plant downtimes.

'Win-SIMOCODE-DP/ Smart V1.3 and Win-SIMOCODE-DP/ Professional V1.3

9.30 Sinaut

Sinaut Micro SC Serial number
0855-7035-6878

9.31 SINEMA

SINEMA E 2006 Lean planning, simulation and configuration tool

SINEMA E 2006 Lean includes the following functions for the engineering of IWLAN networks:

- Quotation phase
- Easy to use Sales Wizard
- Report for quotation creation
- Planning, simulation and configuration
- Planning and simulation of the WLAN infrastructure
- Simultaneous configuration of device groups
- Creation of a report with mounting instructions
- Centralized identification, upload / download and change of device parameters
- Report for the final documentation
- Measures in the case of a problem

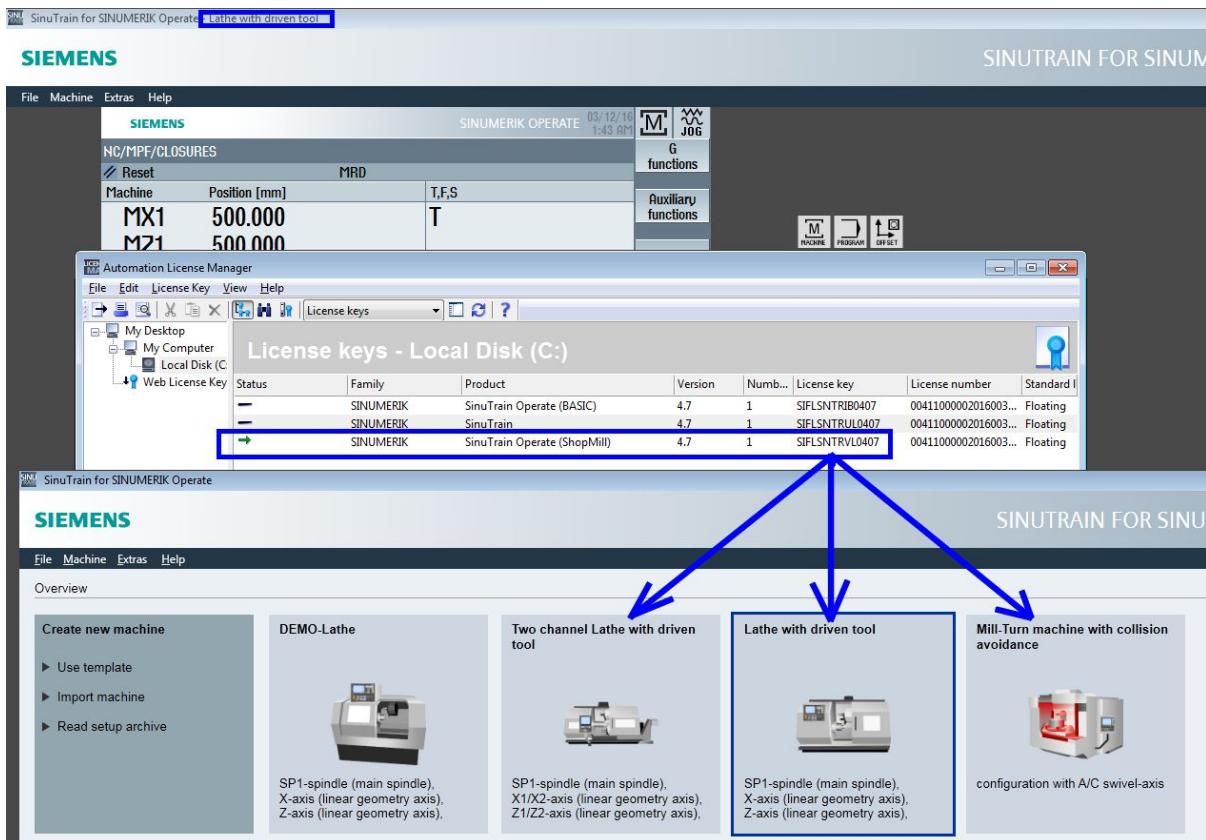

You will find more information on the Website

<http://www.siemens.com/sinema>

| | | | | |
|-----|----------|-----------------------|----------------------------|------|
| 841 | SNSIEL10 | SISLSNSIEL0100 | NET SINEMA E Lean 2006 | v1.0 |
| 842 | SNSIES10 | SISLSNSIES0100 | NET SINEMA E Standard 2006 | v1.0 |

Compared to the **Lean license**, the **standard license** offers additional functions for recording, evaluating and visualizing the measured WLAN signals (site survey) as well as extended simulation and planning features (auto placement, contour display, saving/comparing simulations and extended filtering options).

9.32 SinuTrain

SinuTrain training and programming:

HMI 810D/840D/840Di can be separately ordered and SinuTrain JobShop can also be ordered as classroom license

SinuTrain V06.03 Edition 2 (WIN XP mit Servicepack 1)

Basic

- Communication via serial device interface
- Commissioning
- Parameterization and operation

Standard

- Communication via serial device interface
- Commissioning
- Parameterization, operation and monitoring
- Diagnostics
- Trace function (oscilloscope function)

Premium

- Communication via serial device interface and optional Profibus interface
- Commissioning
- Parameterization, operation and monitoring (via serial device interface or via communication module Profibus)
- Diagnostics
- Trace function (oscilloscope function)
- Group function

9.39 Visionscape

Visionscape Software Version 3.7 use hardware Dongle key

USB Dongle: 6GF3080-0VS00-2KS0

Parallel Port Dongle: 6GF3080-0VS00-1KS0

<http://support.automation.siemens.com/WW/view/en/27196122>

Typical Applications

Dependent on system used please see applications for:

- PC-based system with analog frame grabbers 0300 or 0740
- PC-based system with digital CamLink frame grabber 0800, including line scan

- Intelligent Camera SIMATIC HawkEye 1600T

Customer Benefits

- New ability to cover line scan and high-speed/high-resolution applications with proved and known SIMATIC Visionscape Software
- Enhance PC-based line with Intelligent Cameras: the same Machine Vision jobs can be used on frame grabbers as well as on an intelligent camera
- Ensured, tested cooperation of all components of a complete Machine Vision system due to extensive testing: software, frame grabber, cameras and PC
- Easier to use and to learn due one simplified engineering system FrontRunner, the simplified documentation, and the increased stability
- Complete offering out of one hand with competitive priced cameras and SIMATIC PCs

9.42.5 WinCC v6.2

For some programs (in particular WinCC and WebNavigator) from a diskette it is possible to install only SISLA keys.

On what that to reason SIFLA* keys are ignored at installation - their names are rigidly hammered in Setup.

Only 1 Tags key must be installed.

SISLA

9.42.5.2.3 WinCC/Central Archive Server (CAS)

WinCC /Central Archive Server (CAS) V6.2

For the central process data archiving and analysis, the archive data of all servers present in the system can be swapped out to a computer with the new option CAS. For the display and analysis, the data access is transparent and - among other things - continues to be possible via the standard WinCC clients. In doing so, it is unimportant for the clients whether the data is still located on the WinCC server or is already on the CAS.

Process value as well as alarm archives are created on the individual WinCC servers and - at the conclusion of individual database segments - transferred to the CAS. Thanks to "Store&Forward", the data is safely transferred even in the case of network interruptions between the WinCC server and the CAS (as soon as the network is operational again).

WinCC /CAS V6.2 includes all licenses for the central archive server including 1500 archive tags. The number of archive tags can be increased up to 120000 via PowerPacks.

WinCC /CAS V6.2 is trilingual (German, English and French).

New for Archive Licenses

For archive licenses, the new license type "Count-Relevant" is being introduced starting with WinCC V6.2. It enables a much finer stacking of the licenses.

If, for example, a WinCC project uses a license for 1500 archive tags as well as a license for 5000 archive tags, then a total of 6500 archive tags are available on this computer.

On the other hand, the 512 free archive tags included in the delivery scope of the basic packages are not added up.

For using more 512 Archive Tags is required SIFCY9WTGX0600*

1. SIMATIC WinCC/DataMonitor V6.2 - What's new?

With Version 6.2, new functions, new names as well as a new license are introduced.

The SIMATIC WinCC/DataMonitor (formerly Dat@Monitor) is a component of SIMATIC WinCC/Plant Intelligence. With the WinCC/DataMonitor, data from the process level can be provided to the office world. The newly set up WinCC/DataMonitor V6.2 offers a collection of powerful functions for the analysis and depiction of data from the production. With it, you gain direct access to the production data via the Intranet or Internet.

With the tools of the WinCC/DataMonitor, the user can:

- Efficiently monitor and analyze production lines
- Support decisions with reports
- View the production status at any time and from anywhere

To the proven functions, the two components WebCenter and Reports have been newly added. In addition, the Trends & Alarms were expanded and adapted to the new WebCenter. The WinCC/DataMonitor consists of the functions:

- [Published Reports \(new\)](#)
- [Excel Workbooks \(formerly Dat@Workbook\)](#)
- [Process Screens \(formerly Dat@Symphony\)](#)

- [WebCenter \(new\)](#)
- [Trends & Alarms \(formerly Dat@View\)](#)

Furthermore, a [single license](#) is available starting with Version 6.2.

1.1 Published Reports

"Published Reports" is a function newly added in Version 6.2.

With the WinCC/DataMonitor function "Published Reports", print jobs from WinCC and prepared Excel workbooks can be used for the output of analysis results and process data. The data - that up to now was available in a print job from WinCC or in an Excel workbook - can be retrieved via the Internet in "Published Reports". The report is **executed event-controlled or time-controlled**. The generated reports are stored centrally on the DataMonitor server in either a "public" area, which is accessible by all users, or in a "private" area, which is only accessible by the respective user.

"Published Reports" distinguish themselves through the following key features:

- Parameter setting and execution of report templates in the Internet Explorer via an installation-free client
- Automatic filling out of prepared DataMonitor Excel workbooks or WinCC reports
- Time-controlled generation of reports: hourly, daily, weekly, monthly
- Event-controlled generation of reports
- Generation of PDF files from WinCC report templates
- Downloading of reports from the DataMonitor server
- Automatic distribution of reports by e-mail
- Storing of reports either as public reports or as private reports

1.2 Excel Workbooks

"Excel Workbooks" replace the former "Dat@Workbook".

With "Excel Workbooks" of the WinCC/DataMonitor, it is possible to display alarms and values of a WinCC project's process or archive tags in an Excel table. Besides the current values, additional information - such as timestamp or quality code of the tag - can be displayed as well. In Excel, the user can further process the data or graphically format it.

With the Excel Workbook Wizard, Excel-based reports can be published for WinCC data and thus made available to the Intranet/Internet.

Excel Workbooks offers:

- Direct access to the WinCC data from Microsoft Excel
- VBA interface for integrating Excel workbooks into own applications
- Automatic login for the automatic generation of Excel reports (see "Published Reports")
- Opening of "Published Reports" in the browser or in Excel

1.3 Process Screens

"Process Screens" replace the former "Dat@Symphony".

The WinCC/DataMonitor function "Process Screens" serves purely for the monitoring of and navigation across WinCC process screens with the MS Internet Explorer, and is thus a so-called "view-only client". It can navigate through the process screens - and the controls contained therein - that have been published for the Internet. The cursor - in the form of a so-called "view-only cursor" - indicates that no process-relevant operations are possible.

Analogous to the WinCC/Web Navigator, new functionality is supported with the "Process Screens":

- Screens utilizing own header files in C scripts can be displayed without adaptations by the DataMonitor
- User-defined standard functions can be displayed in the Web View Publisher and are thus enabled for use at the Web client
- WinCC screens, in which indirect addressing is used, can now be posted to the Web without modification
- Functions and display possibilities of the Basic Process Control are now also supported at the DataMonitor

Further information can be found in the delivery release pertaining to the option SIMATIC WinCC/Web Navigator V6.2. (entry ID: [24369567](#)).

1.4 WebCenter

"WebCenter" is a function newly added in Version 6.2.

With the "WebCenter" of the WinCC/DataMonitor, Internet pages for the depiction of WinCC data can be easily created online and without an "installation download". The "WebCenter" provides the possibility of combining different views, e.g. for the management or the maintenance technicians. The "WebCenter" is the central information portal for the access to WinCC data via the Intranet or Internet, and serves as the center for the creation and management of "WebCenter" pages. In a "WebCenter" page, the user can arrange and save the "WebParts" (the DataMonitor objects to be

displayed) to create screen views. Thus, the parallel display of process data and data from the alarm archives is possible for any absolute or relative time period.

Different display types are provided by separate "WebParts":

- Depiction of process values in tabular form
- Calculation and output of process values over consistent time slices
- Display of statistics functions for process values
- Output of trend display for process values
- Bar charts for process values (aggregates)
- Pie charts for process values (aggregates)
- Depiction of the hit list of the alarms
- Depiction of alarms in tabular form
- Arranging of links between "WebCenter" pages
- Providing of links to external Internet pages
- Display of information that is to be output at specific times
- Integration and display of bitmaps
- Offer for selection the last created reports

1.5 Trends & Alarms

"Trends & Alarms" replace the former "Dat@View".

"Trends & Alarms" are used for the display and analysis of process values and alarms archived in WinCC. Via predefined pages, the user selects the WinCC data to be displayed as well as the desired absolute or relative time period. Featuring the same look and feel as the WebCenter, "Trends & Alarms" offer the following functions:

- Multiple X and Y axes (up to three axes)
- Configurable absolute or relative time period
- Access to the WinCC/Central Archive Server (WinCC CAS)
- Savable configuration with WebCenter functionality
- Limitation of the decimal places

- Adjustable colors for the trend display

1.6 Single License for the WinCC/DataMonitor

With the new single license, existing systems with only a single analysis station can be supplemented - for example - with the WebCenter functionality for the production management. Thus, a bridge from the production level to the management level is built with minimal effort. A license is occupied at the server as long as a DataMonitor client - independent of the functionality used - is connected with the DataMonitor server.

2. Upgrades to and Compatibility with older WinCC/DataMonitor Versions

To upgrade the WinCC/DataMonitor V6.x to the WinCC/DataMonitor V6.2, an upgrade package is offered, which is independent of the respective client count.

2.1 DataMonitor Server

Older DataMonitor versions can be upgraded to V6.2. In doing so, the old DataMonitor is first deinstalled and then the DataMonitor V6.2 installed.

2.2 DataMonitor Client

The DataMonitor server checks the version compatibility between server and client and, if required, automatically installs the corresponding client component. This means:

- An 'old' DataMonitor client Vx.y encounters a current DataMonitor server V6.2
-> Current DataMonitor client V6.2 automatically installs itself
- A current DataMonitor client V6.2 encounters an 'old' DataMonitor server Vx.y
-> Communication will continue to function, but with the function scope of Vx.y

9.42.5.2.8 IndustrialDataBridge

IndustrialDataBridge

9.42.5.2.9 WinCC/Connectivity Pack

WinCC /Connectivity Station V6.2

For an easy access by external computers to archive data as well as current process values and alarms, the Connectivity Station was designed. The Connectivity Station is an expansion of the already available Connectivity Pack.

In contrast to the Connectivity Pack, the installation of a WinCC runtime is not necessary on a Connectivity Station. The Connectivity Station offers OPC interfaces as well as an OLE DB Provider, via which WinCC server data can be accessed. The transparent access automatically compiles the requested process data from the archive databases. For the client software it is thus unimportant whether the data is read from a specific server, its redundant partner or even the CAS. Supported interfaces include OPC DA, OPC A&E, OPC HDA and OLE DB for process values.

The Connectivity Station is configured on an NCM PC or in the SIMATIC Manager..

9.42.5.2.10 WinCC/Maintenance Station 2007

SIMATIC Maintenance Station Furthermore, a SIMATIC WinCC station, in addition to its function as process visualization and operator station, can now also be configured as a SIMATIC Maintenance Station or the efficient plant maintenance.

For further information, please refer to the separate sales/delivery release (entry ID [24363298](#)).

The SIMATIC Maintenance Station 2007 is a software option for system integrated

diagnostics and plant-related asset management on the basis of STEP 7 and WinCC.

Automatic generation of a maintenance view in WinCC from the STEP 7 hardware Configuration of plant-wide visualization of all automation components, from management to field level, in ready linked hierarchically arranged WinCC screens

- Illustration of central and distributed SIMATIC S7 components, PROFIBUS and PROFINET networks and associated bus nodes
- Ethernet network components and industry PCs can be included via the SIMATIC Net SNMP OPC server

Display of the conditions of devices with group status generation in overview and detailed screens.
Support of the device conditions “Maintenance requirement“ and “Maintenance request“ for condition-based maintenance

Provision of uniform faceplates for the display of detailed information for all depicted components

Display of the device identification data (electronic type label)

Forwarding of maintenance requests directly from WinCC

Integrated display of the request status

Benefits:

Reduction of downtimes:

Problems in the plant are identified more quickly thanks to the uniform and clear representation of all important maintenance-relevant information

Avoiding plant standstills:

Support of condition-based maintenance

Reduction of maintenance costs:

Optimization of the information flow between production and maintenance by forwarding of maintenance requests and display of the request status Transparency and traceability:

All events are message based and can therefore be archived and traced

An extensive database is created that can be analyzed by WinCC means or with external tools

Scalability:

Support of WinCC single-user stations and client server configurations.

The SIMATIC Maintenance Station can be added to an existing WinCC project

Consistency:

Maintenance view is generated from the control project and is consistent with it

Flexibility in the choice of devices

Use of PROFIBUS and PROFINET standards for device integration

Additional proxy concept enables representation of devices that are not included in the STEP 7 Hardware Configuration, or that do not support the standard diagnosis of PROFIBUS / PROFINET

Application

Option package for STEP7 V5.4 and WinCC V6.2 for diagnosis and maintenance of machines and plant

Generation of a WinCC maintenance view for a STEP 7 project / multiproject

Composition and licensing

The SIMATIC Maintenance Station is available in the form of a basic package containing all tools required for the configuration of a Maintenance Station, as well as a runtime license for the representation of 100 devices. Power Packs for 100, 500 or 1000 devices are available for the operation of larger quantity frameworks. They are simply added and can be combined with one another at random.

The precondition for the configuration of a SIMATIC Maintenance Station is a STEP 7 license (V5.4 and higher), a WinCC RC license (V6.2) and, if required, SIMATIC Net licenses in line with the plant configuration.

The precondition for the operation of a SIMATIC Maintenance Station are WinCC licenses (V6.2) in line with the plant configuration.

Countable devices are:

Automation systems

Distributed devices (PROFIBUS / PROFINET)

PCs

Network components

Proxy blocks (Asset Proxies)

The SIMATIC Maintenance Station supports German / English / French / Italian / Spanish.

The messages displayed in the Maintenance Station can be translated in STEP 7 by the user into more languages.

9.42.5.2.12 WinCC/Audit

WinCC/Audit

,
UserArchive.

| | | | |
|----------------------------|------------------|--------------------|--|
| WinCC / Audit V 6.2 | Audit RT | 6AV6371-1DV06-2AX0 | |
| | Audit RC | 6AV6371-1DV16-2AX0 | |
| | ChangeControl RC | 6AV6371-1DV26-2AX0 | |
| | Upgrade | 6AV6371-1DV06-2AX3 | |

The following licenses are offered: **SIMATIC WinCC /ChangeControl RC V6.2** and **SIMATIC WinCC /Audit RC V6.2** and **SIMATIC WinCC/ Audit RT V6.2**.

For the configuration of which audit trail contents are to be recorded and the project versioning, an RC license is generally required, i.e. WinCC /Audit RC or SIMATIC WinCC /ChangeControl RC.

For all WinCC stations (clients and servers) on which an audit trail is recorded, an RT license - WinCC /Audit RT - is required.

For all external applications on which audit entries for the audit trail are generated, an RT license is required.

Quantity Schedule

There are no quantity limitations with regard to

- the number of audits
- the number of audited servers
- the number of simultaneously accessing viewers

SIMATIC WinCC /Audit V6.2 - Field of Application

SIMATIC WinCC /Audit includes all the functions of SIMATIC WinCC /ChangeControl and additionally supports the user in the **recording and reporting of operator action while in the runtime mode**:

More and more often it becomes necessary - be it because it is required by law or because of own wishes - for runtime operator actions occurring throughout the entire plant to be recorded in a separate audit trail, in order to maintain a clear proof of who performed what operator action when

in the plant.

The use of WinCC /Audit is recommended especially for plant builders who want to validate their plant according to the 21 CFR Part 11 guidelines of the FDA (American Food and Drug Administration) or assure the traceability according to the EU law No. 178/2002. The comprehensive electronic recording of plant changes in the audit trail greatly reduces the work needed for the creation of the plant paper documentation and prevents manual error sources.

9.42.5.2.13 WinCC /ChangeControl

New: SIMATIC /ChangeControl V6.2 - Field of Application

New: SIMATIC WinCC /ChangeControl is a new product and forms a functional subset of SIMATIC WinCC /Audit with a correspondingly lower pricing. SIMATIC WinCC /ChangeControl supports the user in the **recording and reporting of changes while in the engineering mode**:

Many times, plants are still being modified even after the commissioning - and that independently by different persons. If errors occur, downtimes are the result, and an extensive analysis may be required, since information pertaining to the changes is often not available. SIMATIC / ChangeControl supports the user by automatically recording - without interruption - all changes starting from a certain project revision level, which considerably facilitates the error analysis and helps minimize downtimes.

But it also supports the plant builder, e.g. the OEM, in monitoring the plant for changes at the plant operator; thus any change to the engineering of the system can be reproduced without interruption. If irregular operating states occur at the plant operator, the plant builder can very quickly and efficiently assist the plant operator on the basis of the change information contained in the audit trail, thus minimizing service costs and downtimes.

New: Project versioning - within SIMATIC WinCC /ChangeControl, the project versioning enables the archiving as well as restoring of project revision levels of WinCC (including a version number and a comment). In addition, it is recorded in an audit trail which version was created by whom and when.

The following licenses are offered: SIMATIC WinCC /ChangeControl **RC** V6.2 and SIMATIC WinCC /Audit **RC** V6.2 and SIMATIC WinCC/ Audit **RT** V6.2.

9.42.10 WinCC/DowntimeMonitor V1.0

<http://support.automation.siemens.com/WW/view/en/26664769>

SIMATIC WinCC/DowntimeMonitor V1.0?

With the version 1.0, this option is being introduced for WinCC V6.2.

The SIMATIC WinCC/DowntimeMonitor is a component of the SIMATIC WinCC/Plant Intelligence. With the WinCC/DowntimeMonitor, Key Performance Indicators (KPIs) of individual machine units, subsystems as well as production lines (equipment) can be determined. With the DowntimeMonitor, the user can efficiently monitor and analyze production lines. The

DowntimeMonitor can be installed on either a WinCC single-station system, WinCC server or WinCC client with project. It consists of the DowntimeMonitor server and a database, an engineering client and a runtime user interface. This WinCC option supports the user in the execution of the following tasks:

- Tracing of downtime events, assignment of causes and reasons, assessment and monitoring of the equipment efficiency.
- Decision making on the basis of performance indicators through identification of the events that cause cost-intensive equipment failures.
- Identification of speed and quality losses.

1.1.DowntimeMonitor Server

The licensing takes place via the number of the equipment units used. The basic package contains 5 licensed equipment units. Additional licenses are available in steps of up to 25, up to 50, up to 100 and up to 200 equipment units. The DowntimeMonitor server installation is comprised of the server with database, the engineering client and the runtime user interface.

1.2 Engineering Client

On the engineering client it is possible to edit a DowntimeMonitor project, which exemplary depicts the behavior of a specific equipment unit for a defined time period. For this, the following configuration options exist:

- [Time model](#)
- [Reason tree](#)
- [Equipment unit](#)
- [Algorithms \(predefined and specific\)](#)
- [Cyclic calculations](#)
- [Shift calendar](#)

9.42.11 WinCC/ProcessMonitor V1.0

<http://support.automation.siemens.com/WW/view/en/26679792>

SIMATIC WinCC/ProcessMonitor V1.0?

With the version 1.0, this option is being introduced for WinCC V6.2.

The SIMATIC WinCC/ProcessMonitor is a component of the SIMATIC WinCC/Plant Intelligence. The WinCC/ProcessMonitor is used for collecting, manipulating, analyzing and storing

process values. The process values are read directly from WinCC and connected to the corresponding analysis function. The ProcessMonitor can be installed on either a WinCC single-station system, WinCC server or WinCC client with project. It consists of the ProcessMonitor server and a database, an engineering client and a runtime user interface. This WinCC option supports the user in the execution of the following tasks:

- Storing and presentation of process data, which has been prepared via predefined or user-defined statistical calculation operations.
- Depiction of raw process data from WinCC archives.
- Statistical ad hoc analyses for stored process data (from the ProcessMonitor and the WinCC Tag Logging archives).
- Statistical ad hoc analyses for alarms.
- Data retrieval from the WinCC Tag Management, WinCC Tag Logging and WinCC Alarm Logging

1.1 ProcessMonitor Server

The [licensing](#) takes place via the number of used **Key Performance Indicators (KPIs)**. The basic package contains 50 KPIs. Additional licenses are available in steps of up to 250 and up to 1500 KPIs. The ProcessMonitor server installation is comprised of the server with database, the engineering client and the runtime user interface.

1.2 Engineering Client

On the engineering client it is possible to edit a project. The most important objects used for the acquisition of data and for the execution of calculations are the tags. In contrast to WinCC standard tags, these are functionally expanded tags. After the configuration, each tag possesses a specific functionality and thus is a KPI. Four different types of tags exist:

- [Archiving data](#)
- [Predefined calculations](#)
- [User-defined calculations](#)
- [Context-dependent data](#)

| Click a file and save an attachment.. | . |

file BusinessObjects_XXXXXXXXXXXXXXXXXXXXXX.signed.key.xml

Quote:

Dear Customer,

Please find enclosed your BusinessObjects Enterprise 6.1b license key file.

IMPORTANT NOTICES :

Due to some firewall rules, attached files can be automatically renamed when you receive it. The BusinessObjects license key file MUST have the ".signed.key.xml" extension in order to be recognized at the product installation. If not the case please rename the file with the proper extension (i.e. BusinessObjects_XXXXXXXXXXXXXXXXXXXXXX.signed.key.xml)

This mail has two attached files.

The BusinessObjects_Enterprise_610_oem_***.signed.key.xml is the signed license key file for Business Objects.

But as some gateways may corrupt the .xml file, a gzipped file including the same license key has been attached to this mail. If the .xml is not recognized, you may try with the one included in the .gz file.

For the BusinessObjects installation program to complete successfully you are required to point to the location of the license file. (Refer to Installation Guide)

Do not modify this file as it is digitally signed and consequently may not work if modified. This license file is in accordance with the terms and conditions of the software license agreement applicable to products of Business Objects as signed between Business Objects or its authorized agent and Licensee. This file shall not be shared or distributed outside of your organization.

STEP 7 V5.3 - User authorization by the Automation License Manager

Difference between ALM and SIMATIC Logon

STEP 7 V5.3 - notes on using STEP 7 License Keys

License concept PCS 7 V8.0

12.1 How do you store licenses on a server and protect them from unauthorized access?

Description:

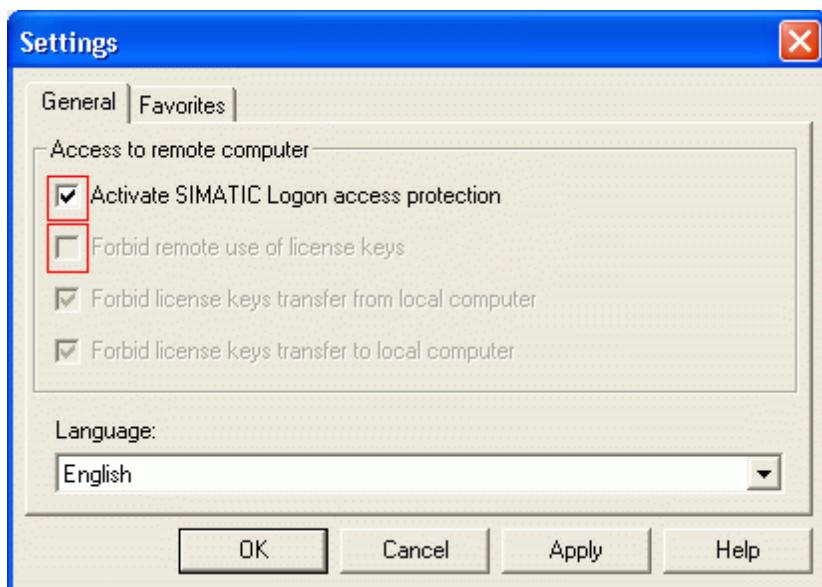

With the new Automation License Manager "ALM" V3.0 you can manage the floating license online. The license keys are stored on a central computer that serves as server computer. The SIMATIC Logon add-on package must also be installed. Using Logon you can conveniently control the use of your licenses on the local computer or on computers in a workgroup. Unauthorized access to licenses is prevented by a logon dialog and user administration. If there is no corresponding license available locally, you can use the license from the license key server. If there is a connection failure to the server you can continue working for three hours without any problems. After three hours you get the message that there is no license key available on the computer. In addition, the ALM on the server reserves the license for the computer for three hours in the case of power failure. If the connection is not restored after three hours, the Automation License Manager releases the license again for every user.

License Key in the Network

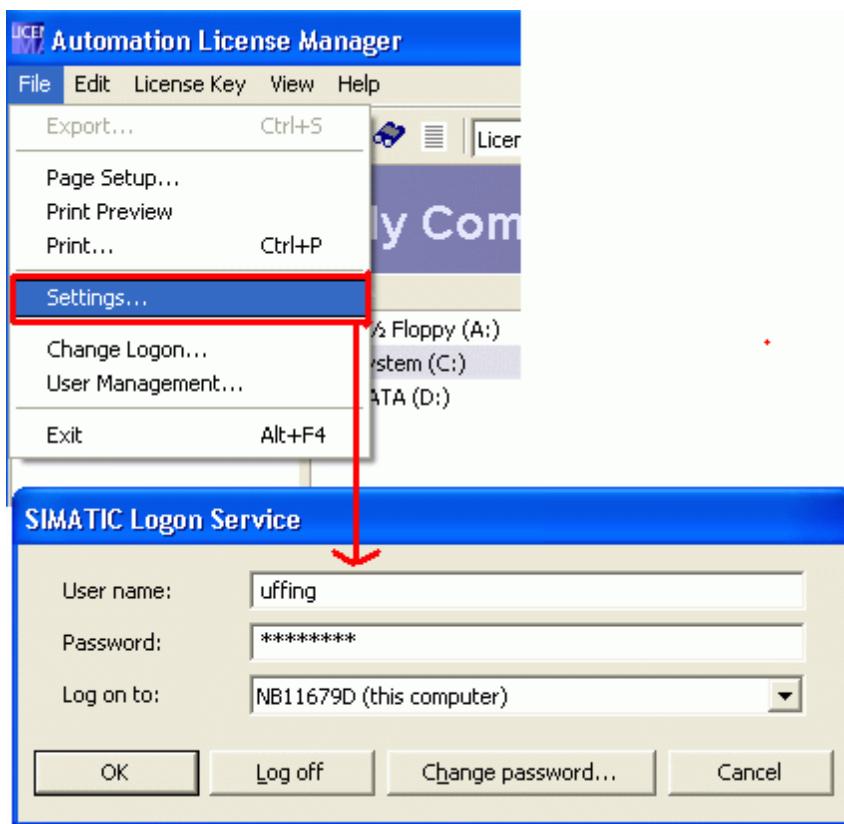

Advantages:

- Central storage of the license keys on one PC
- Automatic assignment and release of the keys
- Central management (e.g. upgrades etc.)
- Central logging of the license key activities

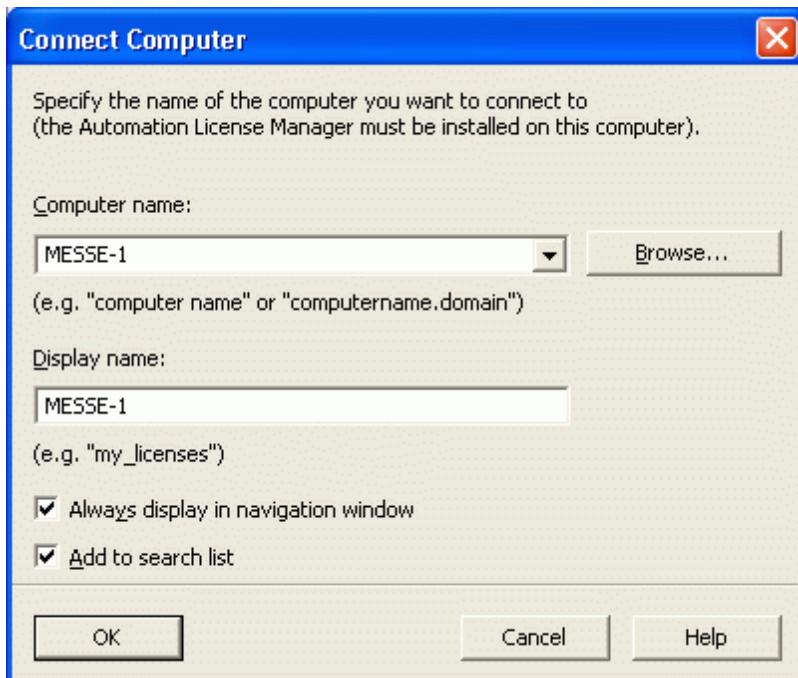

1. Enable remote access for the license keys on the license server via the ALM under "File > Settings".

2. Now go to your workstation computer and close all the SIMATIC applications.
3. Log on to the local computer via "File > Change Logon" of the Automation License Manager.

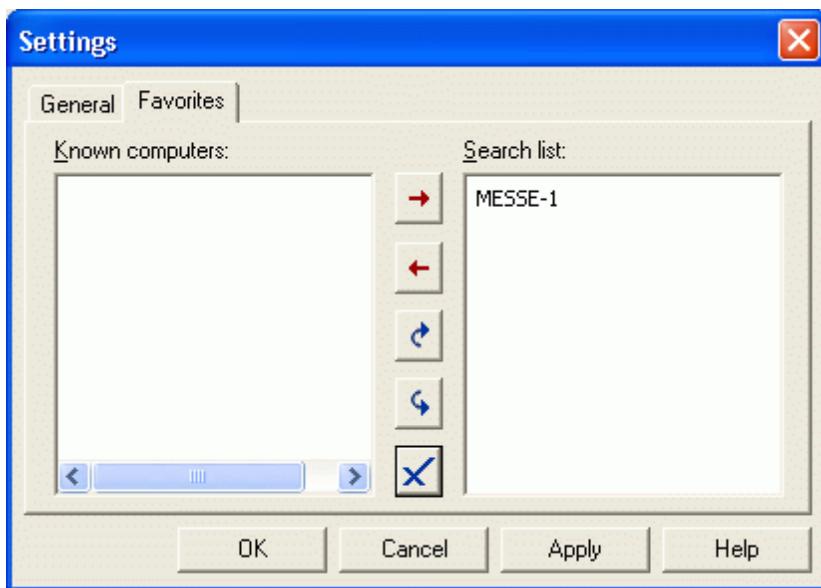

4. If not available, add the license computer via "Edit > Connect computer" on your local computer.

5. Check the setting in the ALM with the menu command "File > Settings > Favorites". The license

server "Mess-1" must be entered here.

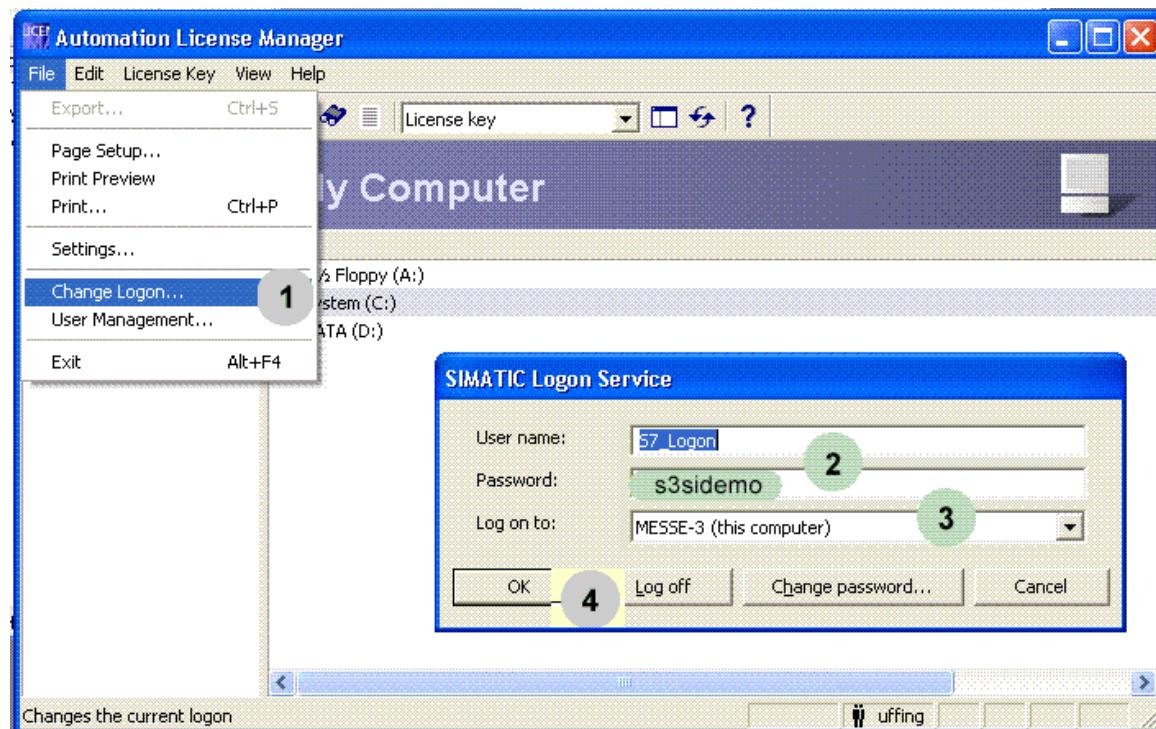

6. Now you can use the license of the license server.

User Management with Logon

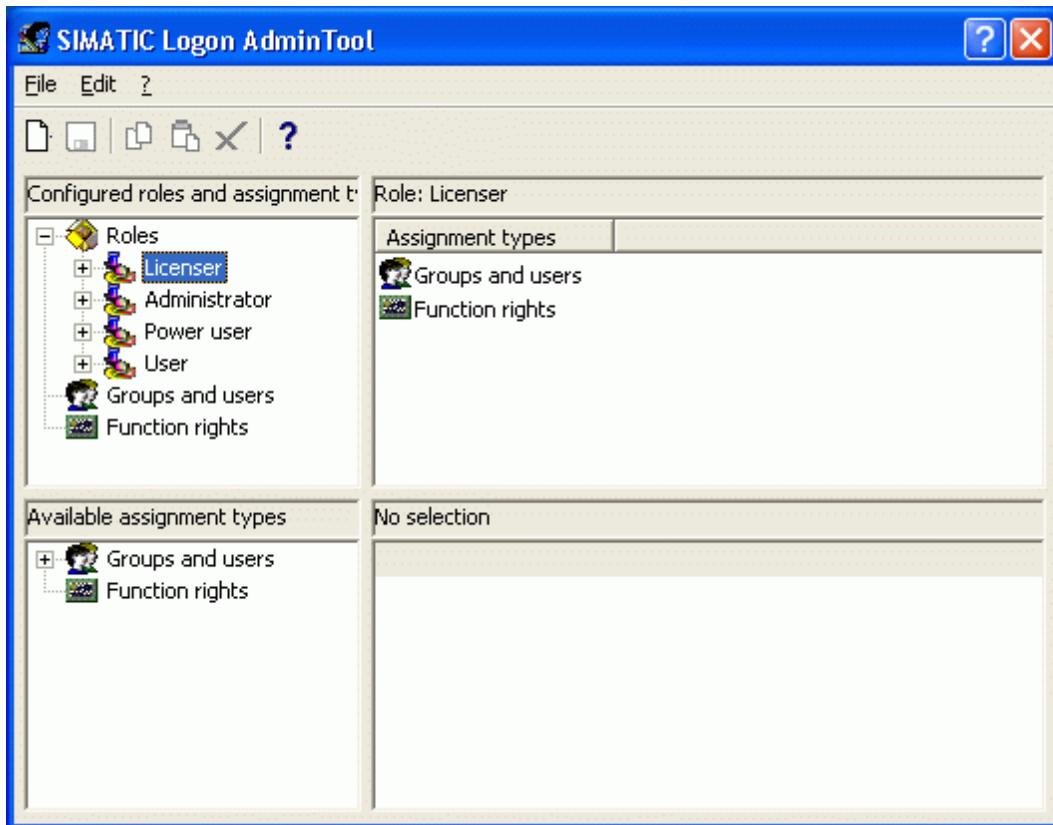

Advantages:

- One tool for all types of license
- Simple license management
- Display of missing software licenses
- Differentiated administration of rights for individual users
- Uniform administration of rights from one license server is possible
- Logging of all license key activities (e.g. usage, transfer ...)

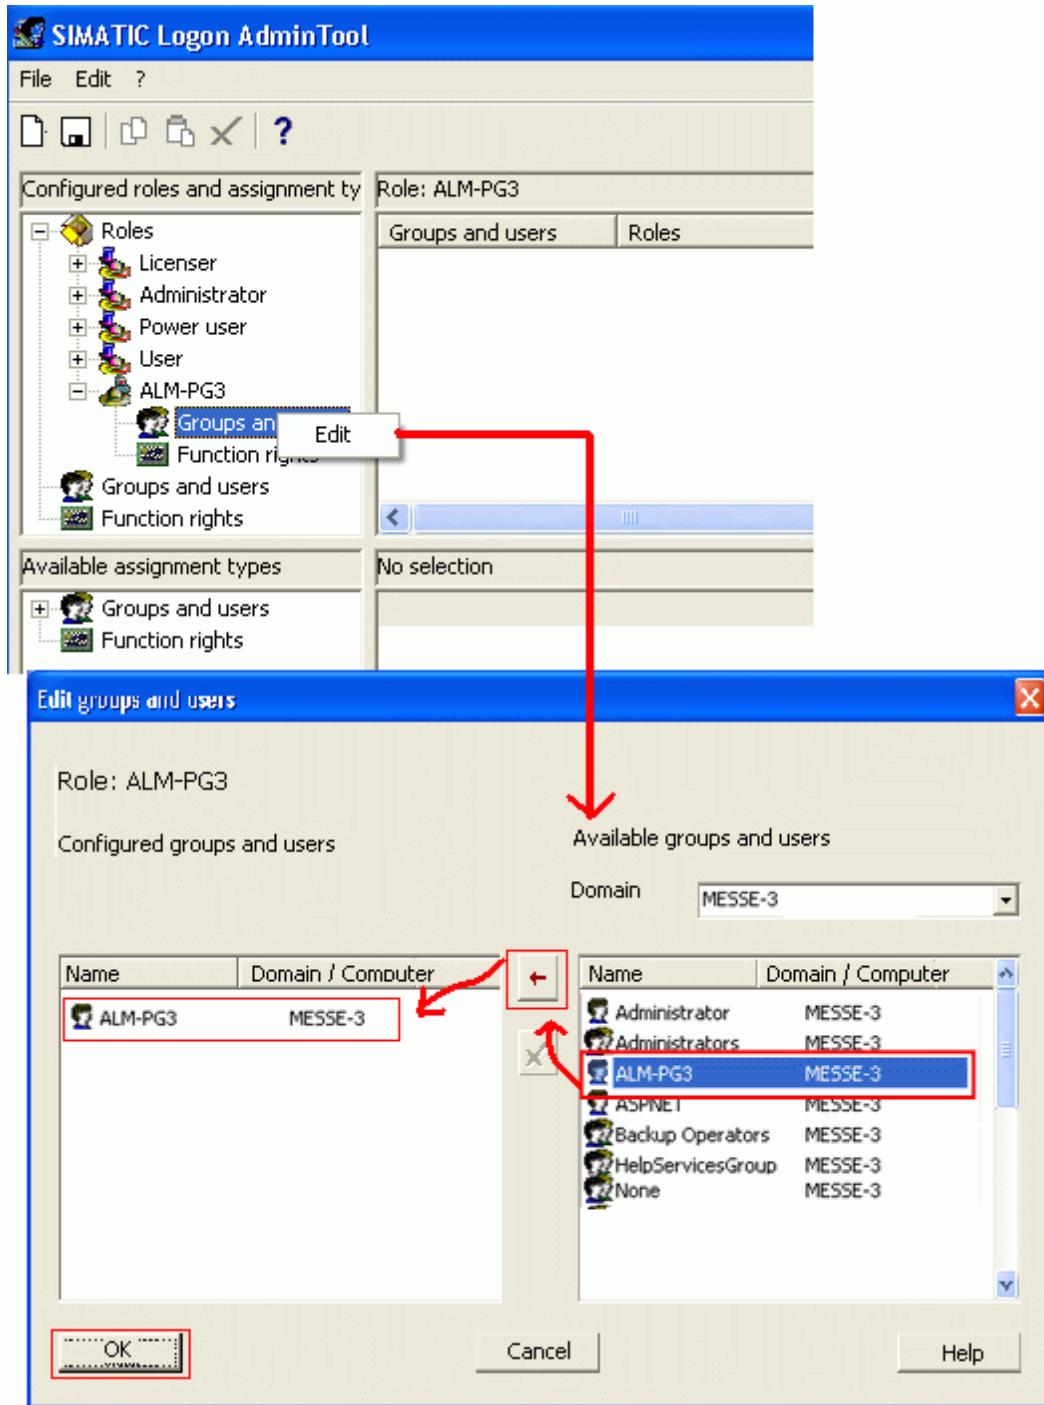

1. Open the SIMATIC Logon Service via "File > Change Logon" and log on.

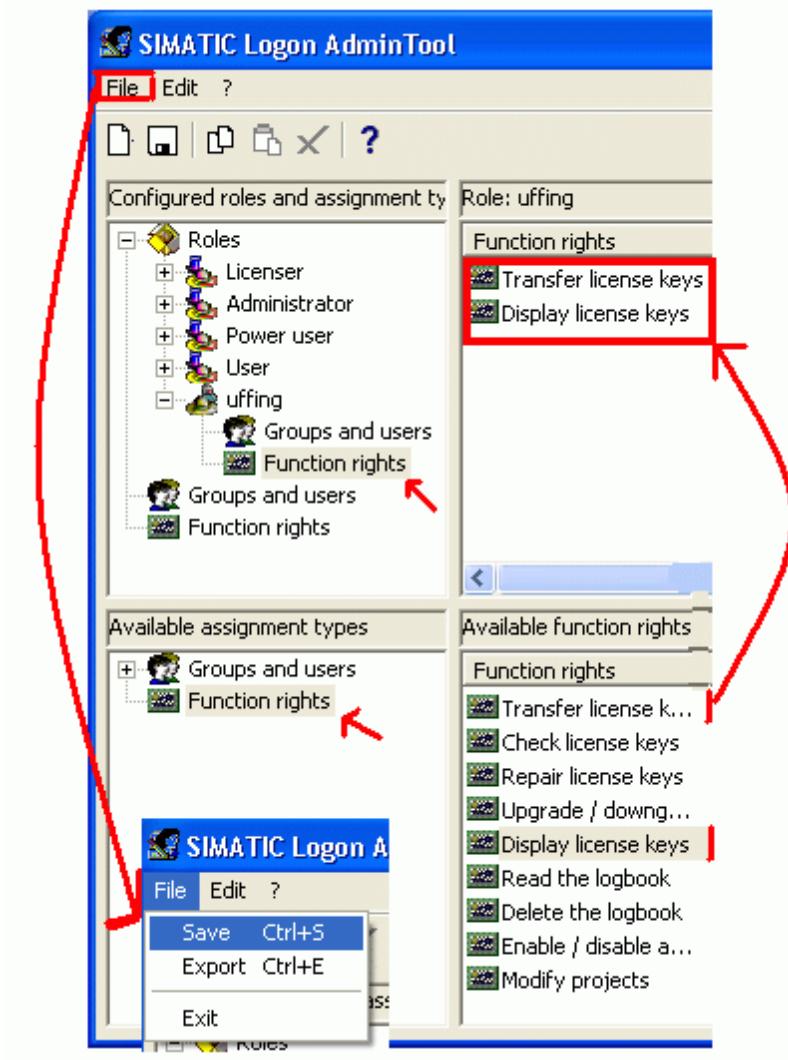

2. Open the "SIMATIC Logon Admin Tool" dialog via "File > User Management".

3. Right-click "Roles" and create a new role in the pop-up menu.
4. Under the new "ALM-PG3" role select "Groups and Users" and edit them.

5. Now select the required rights and copy them via drag-and-drop into the top right window. Save the changes and then log on with the new role logon.

6. Now it is no longer permissible to transfer the license, because there aren't the rights required. The administrator can assign this rights via the Admin tool. The licenses can be used by any registered user, but cannot be moved.

Tools used:

- Automation License Manager V3.0
- SIMATIC Logon with Administration Tool for User Management V1.3 SP1

12.2 How can you deactivate the Trial License when the message appears indicating that the Trial License has expired, although the Floating License has been installed?

<http://support.automation.siemens.com/WW/view/en/24200966>

How can you deactivate the Trial License when the message appears indicating that the Trial License has expired, although the Floating License has been installed?

Instructions:

Once activated the Trial License is valid for limited use up to a maximum of 14 days of the SIMATIC Software for tests, for example. If after expiry of this time you install a license for unlimited use (Single, Floating or Upgrade License) and after installation you still receive the message indicating that the Trial License has expired, we recommend deleting the Trial License in the "AX NF ZZ" folder.

Procedure for deleting a Trial License

1. Open the ALM in MS Windows via

- "Start > SIMATIC > License Management > Automation License Manager"

and mark the drive (e.g. "C") on which your licenses are installed. Displayed in the right window of the Automation License Manager is the table of the licenses installed. For viewing the licenses you need the file name (License Key) and the 20-digit license number. If these columns are not yet displayed, then via

- "View > Define..."

you open the "Define View" dialog. In the bottom section of this dialog you select the "Columns" tab and then "License key" and "License number".

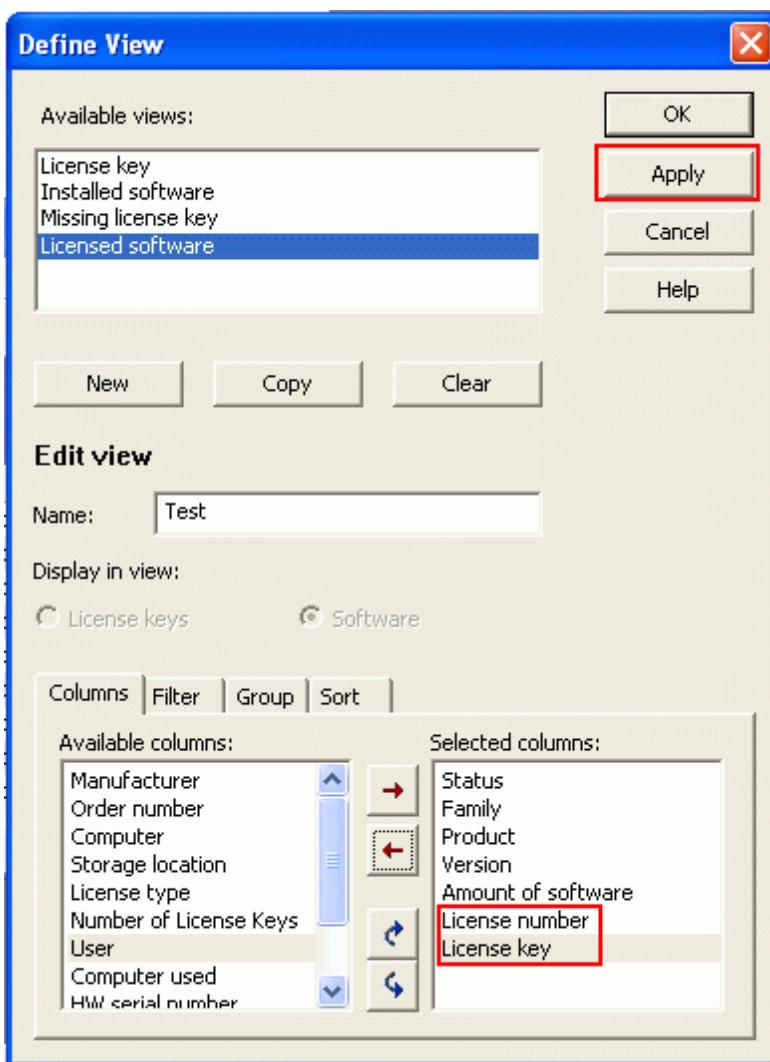

Fig. 01

Then you enter a name under "Edit view" and click the "Apply" button. Acknowledge with OK and the "License key" and "License number" columns appear in the Automation License Manager.

2. In the Explorer you mark the "AX NF ZZ" directory on your hard disk or on drive "C", so that the file names of the licenses are displayed in the right window of the Explorer.

If the "AX NF ZZ" directory or the files in that directory are not visible, then open the dialog "Tools > Folder options..." and select the "View" tab:

- Here you deactivate the option "Hide protected operating files (Recommended)" and
- Activate the option "Show hidden files and folders".

Then click on the "Apply" button and acknowledge with "OK".

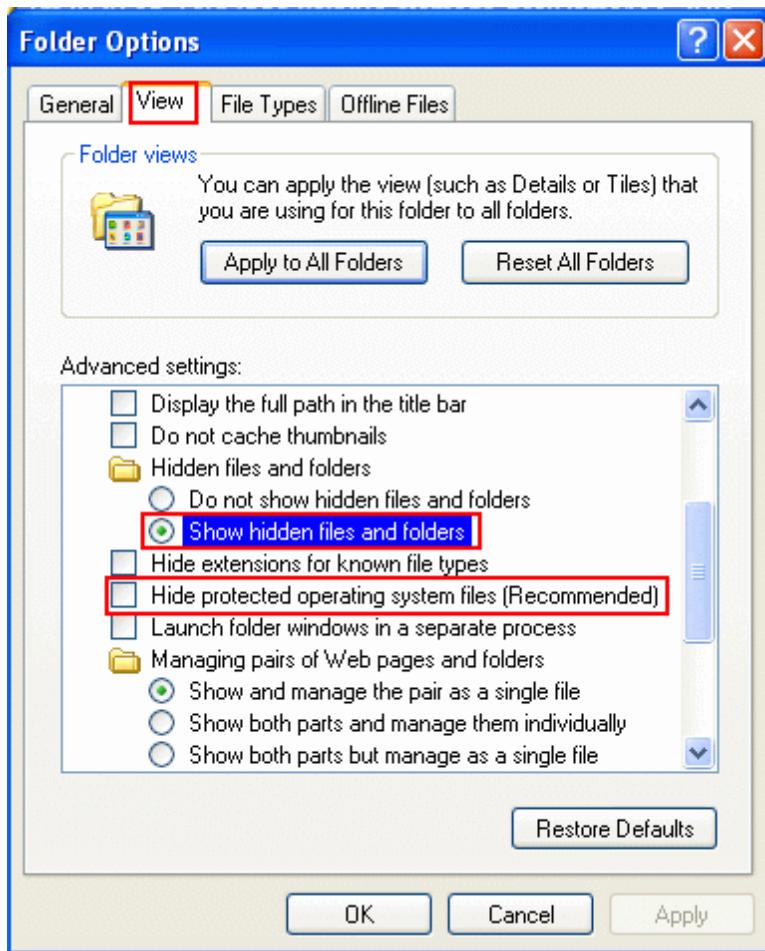

Fig. 02

The "AX NF ZZ" directory is then displayed in the Explorer.

3 Now in the Automation License Manager compare the file name (License Key) of the Trial License with the file name in the "AX NF ZZ" folder. Via the view set in the Automation License Manager you determine the file name for the Trial License to be deleted (Fig. 03) that you then find in the "AX NF ZZ" folder.

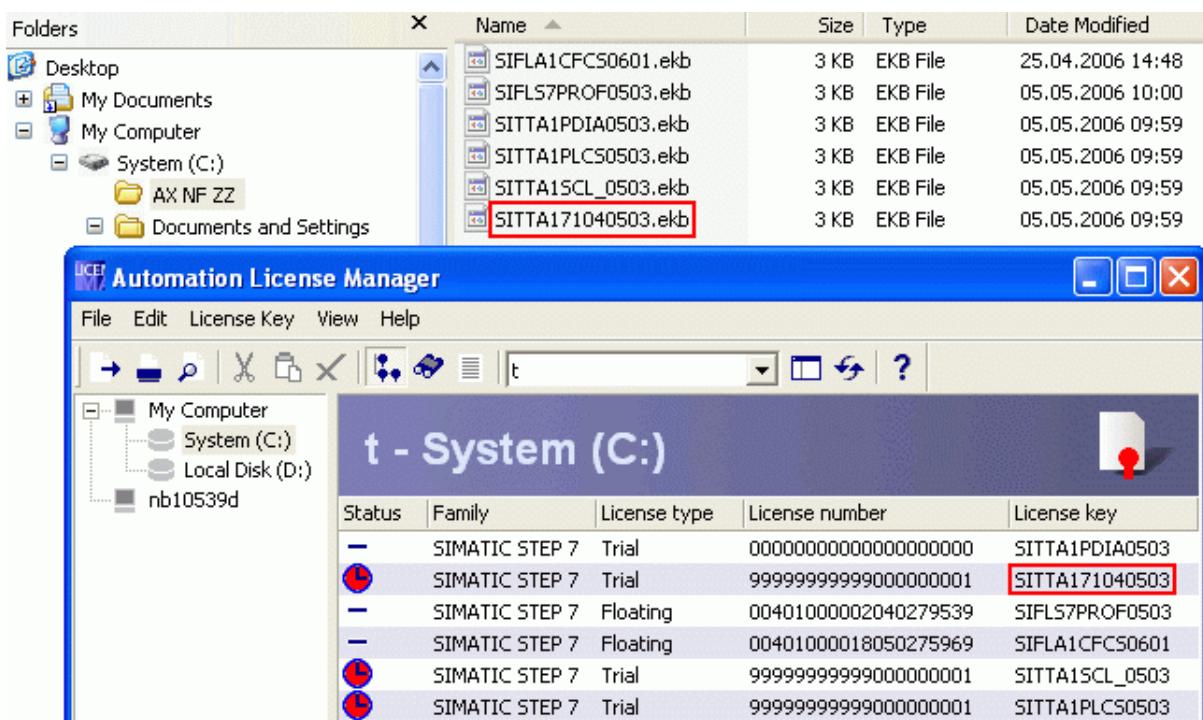

Fig. 03

4 Mark the Trial License found in the "AX NF ZZ" directory and right-click. Then select "Delete" in the pop-up menu that opens. After deletion the message described above will no longer appear.

But need also: Removal of Trial keys and their traces

12.3 How can you keep SIMATIC license files working and avoid loss of authorization?

<http://support.automation.siemens.com/WW/view/en/23175058>

Instructions:

Authorizations and License Keys from Siemens for the SIMATIC software are copy protected and can only be managed with a SIMATIC handling program (see table). In the original the keys are supplied exclusively on commercially available yellow and red floppy disks with individual ID features (ID:KHE and Lic-No.). This ID is also to be found for the authorizations and license keys that are displayed in the handling program so that they can be assigned to their original floppy disks in each case. Normally the handling program supplied with the software or on the floppy disk is best suited in each case. In an emergency, it might help to install the latest version concerned (exception: DOS and Windows authorizations). Please also refer here to the installation instructions regarding the system requirements that are included with software requiring authorizations and licenses.

A difference is made between the following license procedures:

- MS-DOS authorization (DOS authorization)
- Windows authorization (authorization)
- Windows License Key ([Floating/Single/Rental/Upgrade] License Key)

| Procedure | Optimum handling program | ID | |
|-------------------|--------------------------|-------------------------|---------------------|
| | | In the handling program | On floppy disk |
| DOS authorization | Authors.exe | Serial number | ID:KHE (tw.without) |

| | | | |
|---------------|-------------------------------------|----------------|---------|
| Authorization | AuthorsW | Serial number | ID:KHE |
| License Key | ALM (Automation License Manager) | License number | Lic-No. |

General requirements:

In Windows NT, 2000 and XP you need Administrator or at least standard user rights and access rights to the target drive and to the source drive.

For this we recommend internal floppy disk drives.

The table below gives a few instructions for handling authorizations and license keys in order to avoid the loss of license files.

Instructions for handling authorizations and license keys

Before formatting, compressing or restoring the drive or **before** installing a new operating system please save the authorizations and license keys.

- You must transfer the authorizations from the hard disk back onto the authorization floppy disk.
- You can save the license keys on the original floppy disk or on USB sticks, for example.

When you uninstall, install, move or upgrade keys, you should first close all the background applications visible in the taskbar.

Optimization programs must not affect authorizations and license keys and cannot repair them.

This applies in particular for

- Anti-virus programs; scanning functions like Autoprotect should be disabled at least

temporarily.

- Defragmenting of hard disks.
- Scandisk up to Windows 2000, Checkdisk for Windows XP.
- Repartitioning of the hard disk / partition.
- Compressing and restoring.

Before you use optimization programs or reload a hard disk backup, please also save the authorizations and license keys.

Authorizations and license keys

- Do not work on compressed drives. In the case of compressed drives (e.g. DBLSPACE) you must install the authorization on the associated host drive.
- Only work within internal networks (LAN).
- Never work on read-only media (e.g. CD-ROM).

When installing authorizations and license keys, the data is stored in the hidden system directory "["AX NF ZZ"](#)" of the drive concerned.

You must not change the directory's attributes, move the folder or delete the files.

If a hard disk backup contains a copy of an authorization, there is the risk that reloading the backup data will overwrite the authorizations that are still valid and thus destroy them.

To prevent loss of authorizations through overwriting you must either remove the authorizations before creating a backup or exclude them from the backup.

You can copy the files on the authorization floppy disk.

However, you cannot use the copies for authorization.

For that you need the original authorization floppy disk.

The authorization creates a cluster on the target drive, which might be marked as "defective".

You must not "repair" this cluster.

You can only ever install one authorization of a version on one and the same drive.

You can no longer use AuthorsW to uninstall defective authorizations.

This might block the installation of new authorizations.

When upgrading you should always follow the instructions provided with the software or the instructions given in the Help of the tools used in each case.

12.4 How do you install, uninstall and upgrade authorizations?

<http://support.automation.siemens.com/WW/view/en/23174483>

Instructions:

The following instructions apply for STEP 7 up to and including V5.2 and AuthorsW version V2.4.2 or older.

As from STEP 7 V5.3 the license key is installed with the Automation License Manager (ALM).

Installing the authorization:

When you initially install STEP 7, you are prompted to install the authorization. You can do this during installation of STEP 7 or later.

The table below describes how to proceed to install the authorization.

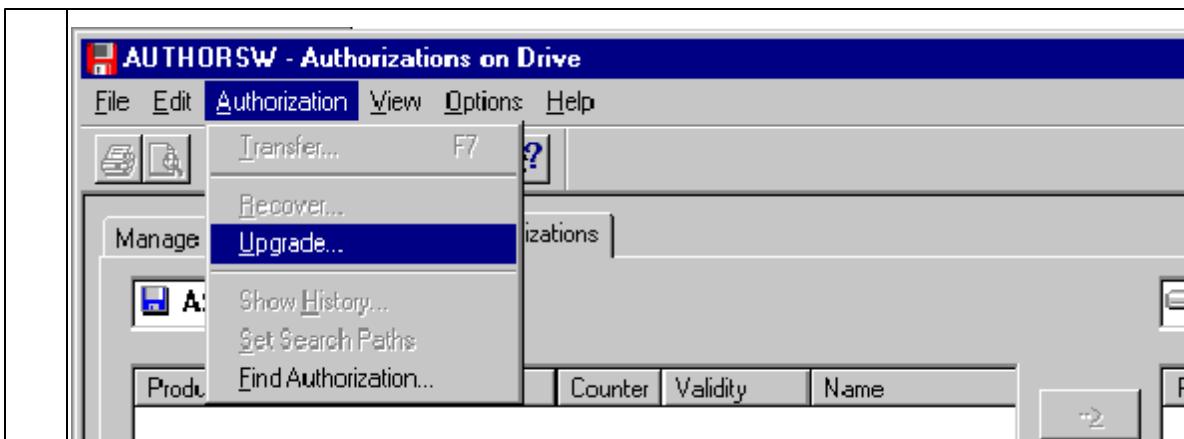

| No. | Procedure |
|-----|---|
| 1 | Insert the relevant authorization floppy disk when requested during installation of STEP 7 and then acknowledge the request. The authorization is transferred to a physical drive. |
| 2 | If you want to install the authorization later, then proceed as follows. After installing STEP 7 you insert the authorization floppy disk into the disk drive and call the "AuthorsW" program via the Windows Start menu: "Start > SIMATIC > AuthorsW > AuthorsW". |
| 3 | In the "Transfer Authorizations" tab, from one of the two list fields you select the drive on which the authorization is located (e.g. floppy disk drive). |
| 4 | Select the target drive in the other list field. Now all the available authorizations of both drives are shown. |

| 5 | Mark the authorization to be transferred and click the "<--" button or the "-->" button according to where the authorization is to be transferred. Then close the dialog field. |
|---|---|

Upgrading an authorization:

The table below describes the requirements and procedure for upgrading an authorization.

| No. | Procedure |
|-----|---|
| 1 | <p>The following requirements must be fulfilled:</p> <ul style="list-style-type: none"> The AuthorsW tool must be installed. If AuthorsW is not installed on your computer, you must first install it. The "Setup.exe" of AuthorsW is available on the STEP 7 CD in the directory "AuthorsW/Disk1". The "old authorization" must be located on the associated "old authorization floppy disk". If necessary, first transfer this authorization from your computer back onto the "old authorization floppy disk". The relevant upgrade authorization floppy disk must now be available. |
| 2 | Insert the upgrade authorization floppy disk and call the "AuthorsW" program via the Windows Start menu: "Start > SIMATIC > AuthorsW > AuthorsW". Select the menu command "Authorization > Upgrade". |

Note:

Since the existing authorization is deleted and replaced by a new one during the upgrade, the authorization floppy disk must not be write-protected at any time.

- | | |
|---|--|
| 3 | Read the instructions displayed and click "OK" to acknowledge. |
| 4 | In the "Select Upgrade Program" dialog you select the relevant upgrade program and when requested you insert the old authorization floppy disk. You are asked once again whether you really want to upgrade the authorization. If not, this is the last chance to abort the upgrade. After acknowledging the dialog you must not interrupt the process in any way, otherwise the authorization might be damaged. |
| 5 | Now, when requested, insert the upgrade floppy disk again. All the necessary requirements are checked and if everything is OK the upgrade finishes by activating the new authorization. Now the new authorization is installed on the drive on which the old authorization was located. |

Uninstalling authorizations:

Please proceed as described below to uninstall authorizations.

| No. | Procedure |
|-----|---|
| 1 | Insert the authorization floppy disk into the relevant floppy disk drive and open the "AuthorsW" program via the Windows Start menu: "Start > SIMATIC > AuthorsW > AuthorsW". |
| 2 | In the "Transfer Authorizations" tab you select the list fields "Source Drive" and "Target Drive" (floppy disk drive). |
| 3 | Click the "<--" button or the "-->" button. The authorizations selected are transferred to the drive selected. |

Note:

You can also transfer the authorizations to other hard disks or network drives.

Recovering authorizations

If an authorization is defective, please get in touch with your authorization hotline.

| | Telephone | Fax | E-mail |
|-----------------------|------------------|------------------|--|
| Europe/Africa | (0)180 5050 222 | (0)180 5050 223 | adautorisierung@siemens.com |
| America | +1 423 262-2522 | +1 423 262-2289 | simatic.hotline@sea.siemens.com |
| Asia/Australia | +86 1064 757 575 | +86 1064 747 474 | adsupport.asia@siemens.com |

You might be able to repair a defective authorization with the menu command "Authorization > Recover". Use this menu item to recover defective authorizations. It is only possible to use this function in agreement with the authorization hotline. Normally you do not need this function.

You will be in contact over the phone with the authorization hotline during the entire recovery procedure.

Please have the following information at hand when you call the authorization hotline:

Authorization : Name of the authorization.

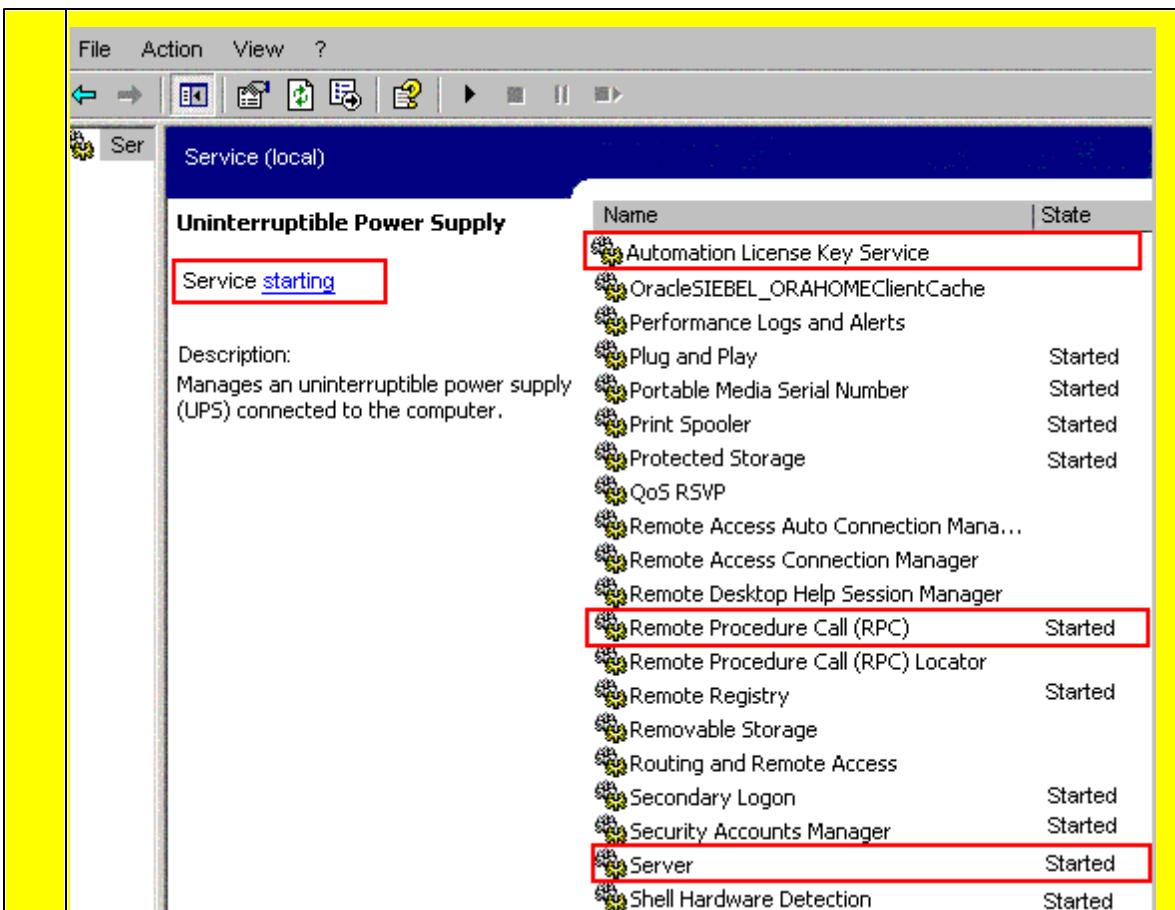

Query code : The code that must be given to the authorization hotline.

12.5 How can you open the Automation License Manager when the message "No connection to the License Key Handler" appears?

Instructions:

The table below describes how to proceed to disable the message described above so that you can open the ALM (Automation License Manager).

| No. | Procedure |
|-----|---|
| 1 | <p>Make sure that the following tasks have been started on your operating system:</p> <ul style="list-style-type: none"> • Automation License Key Service • Server • Remote Procedure Call (RPC) <p>For this you open the dialog "Services" in Microsoft Windows XP via "Start > Settings > Control Panel > Performance and Maintenance > Administration > Services" or in Windows 2000 via "Start > Settings > Control Panel > Administration > Services".</p> |

Notes on the Windows XP and Windows 2000 operating systems:

You get to the "Control Panel" menu

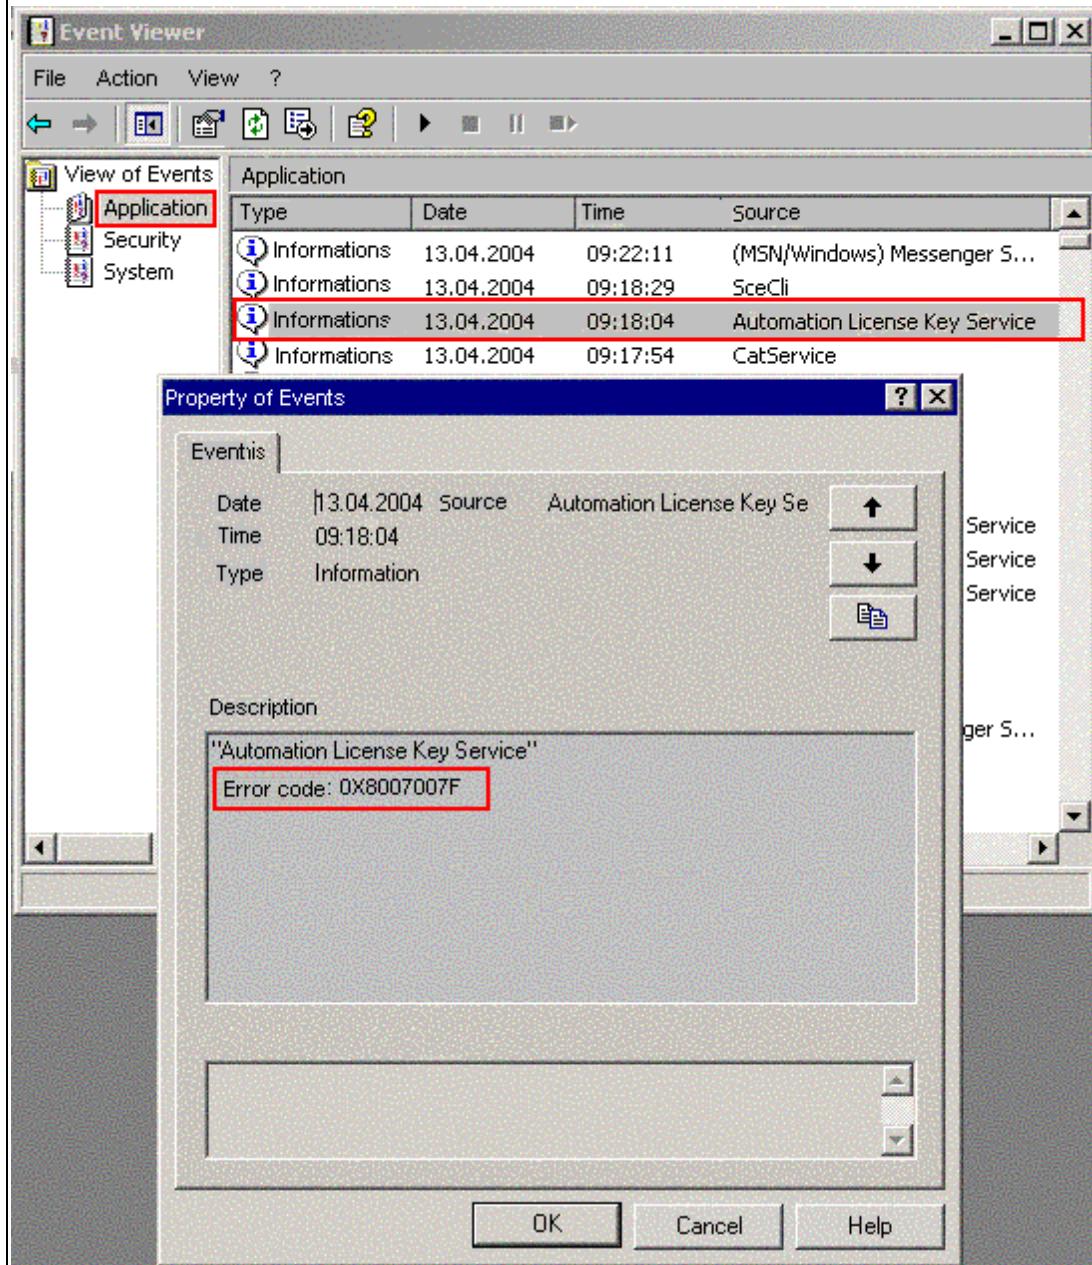

- Via "Start > Control Panel" (in the Start menu for simplified access to the programs in Windows XP).
- Via "Start > Settings > Control Panel" (for the classic Start menu as in earlier versions of Windows, e.g. Windows 2000).

In the Control Panel menu in Windows XP there are two different views, the Classic View and the Category View. If you select Category View, you have two options for opening the "Services" dialog:

- First switch to the Classic View and there open the dialog "Services":
"Switch to Classic View > Administrative Tools > Services"
- or in the Category View open the dialog "Services":
"Performance and Maintenance > Administration > Services".

- | | |
|---|---|
| 2 | You can use the "Start" link to start the tasks described above if they have not yet been started. If the "Automation License Key Service" - as in Fig. 01 - doesn't start, check the |
|---|---|

Windows event display. For this you open the "Event Viewer" dialog in Microsoft Windows XP via "Start > Settings > Control Panel > Performance and Maintenance > Administrative Tools > Event Viewer" or in Windows 2000 via "Start > Settings > Control Panel > Administration > Event Viewer".

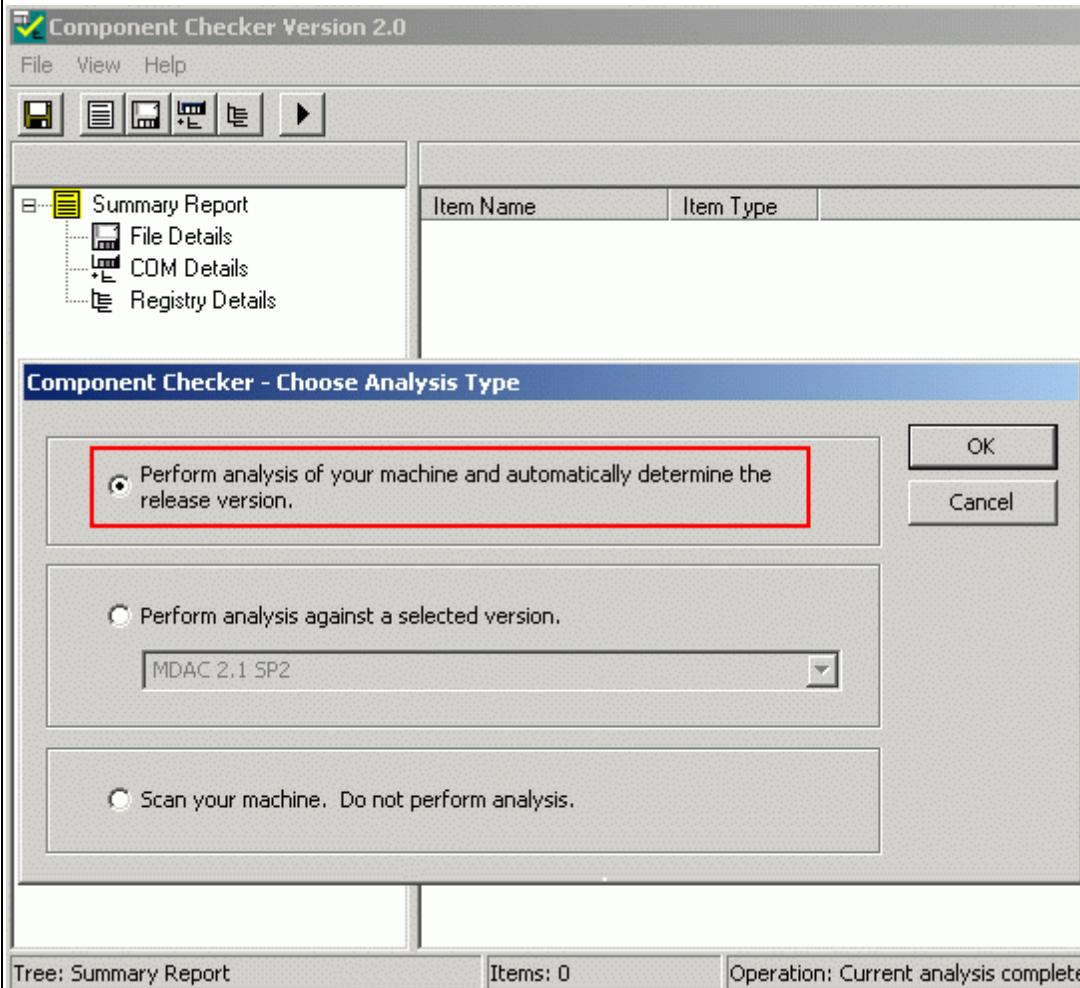

- 3 If the error code 0X8007007F appears in the Application protocol of the Event Viewer - as in Fig. 02 - we recommend that you install the Component Checker to check the available version of the (Microsoft Data Access Components) on your PC:

<http://www.microsoft.com/downloads/details.aspx?FamilyId=8F0A8DF6-4A21-4B43->

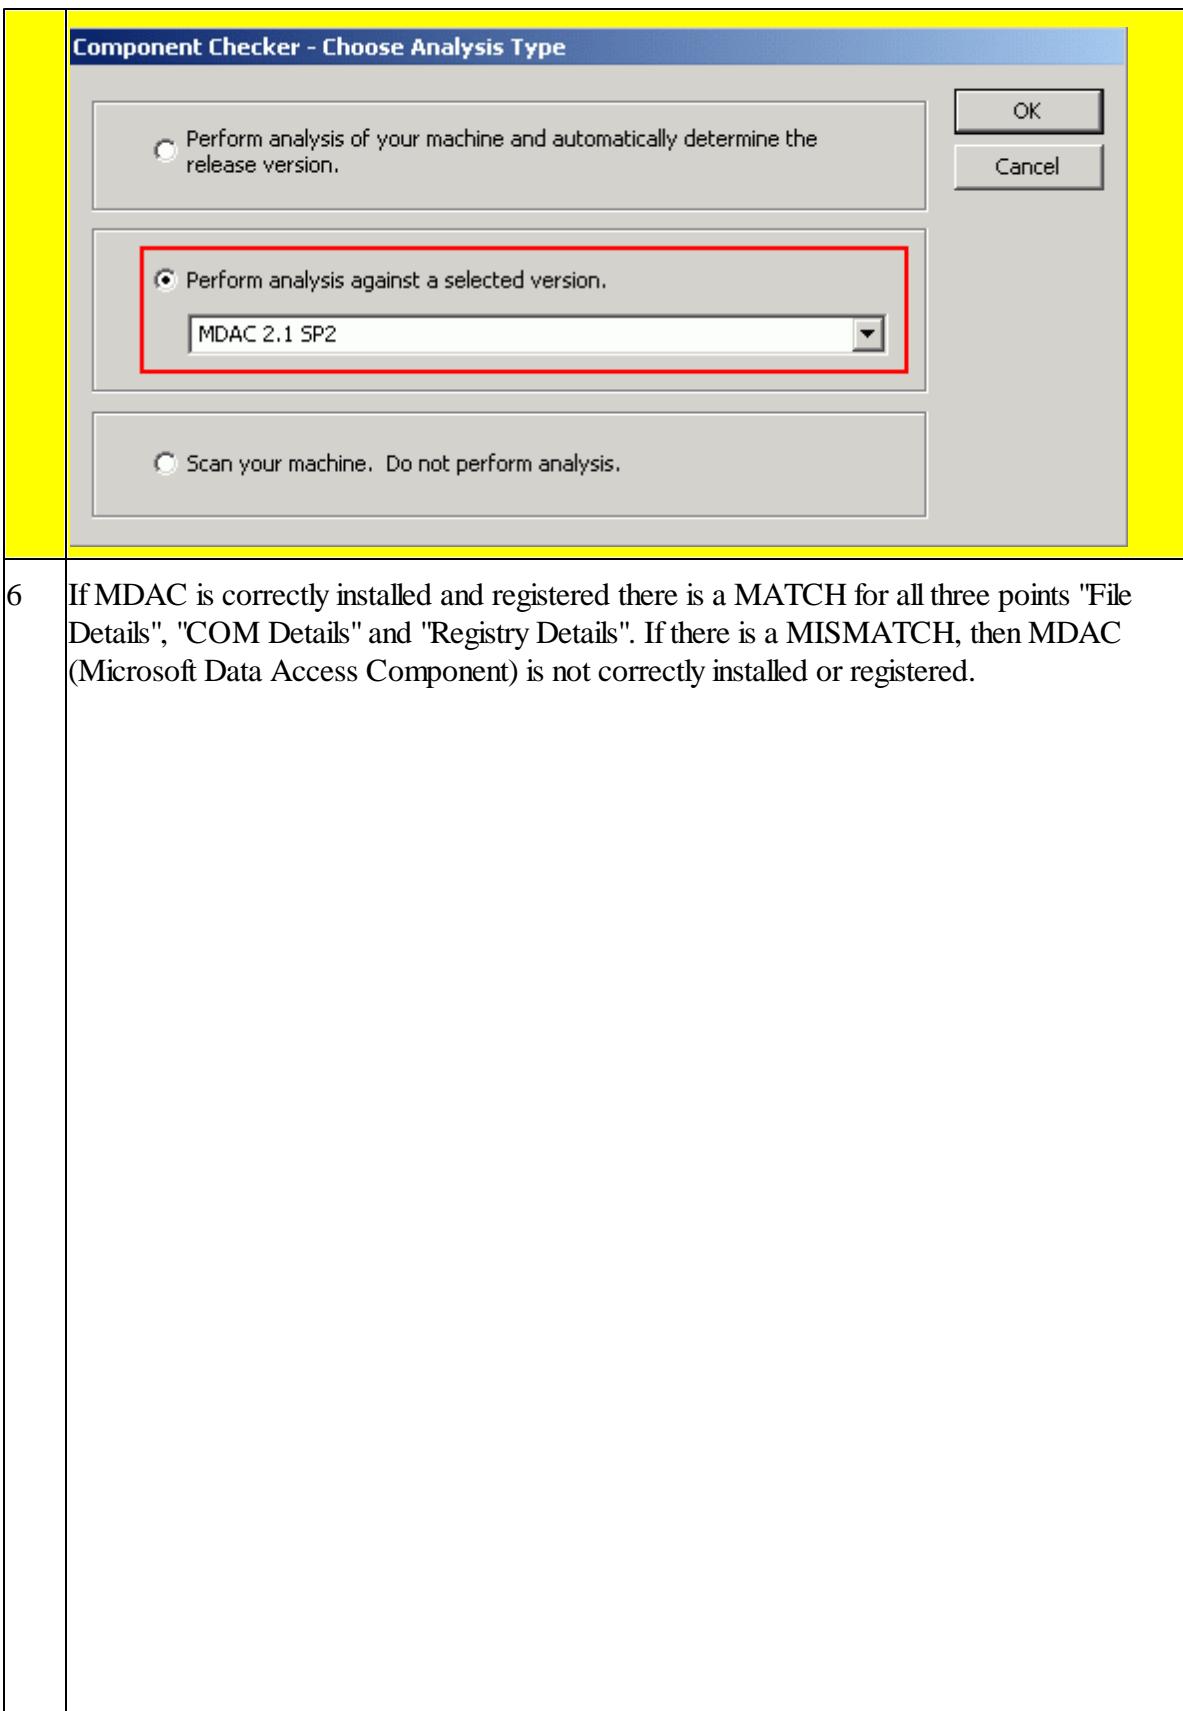

[BF53-14332EF092C9&displaylang=en](#)

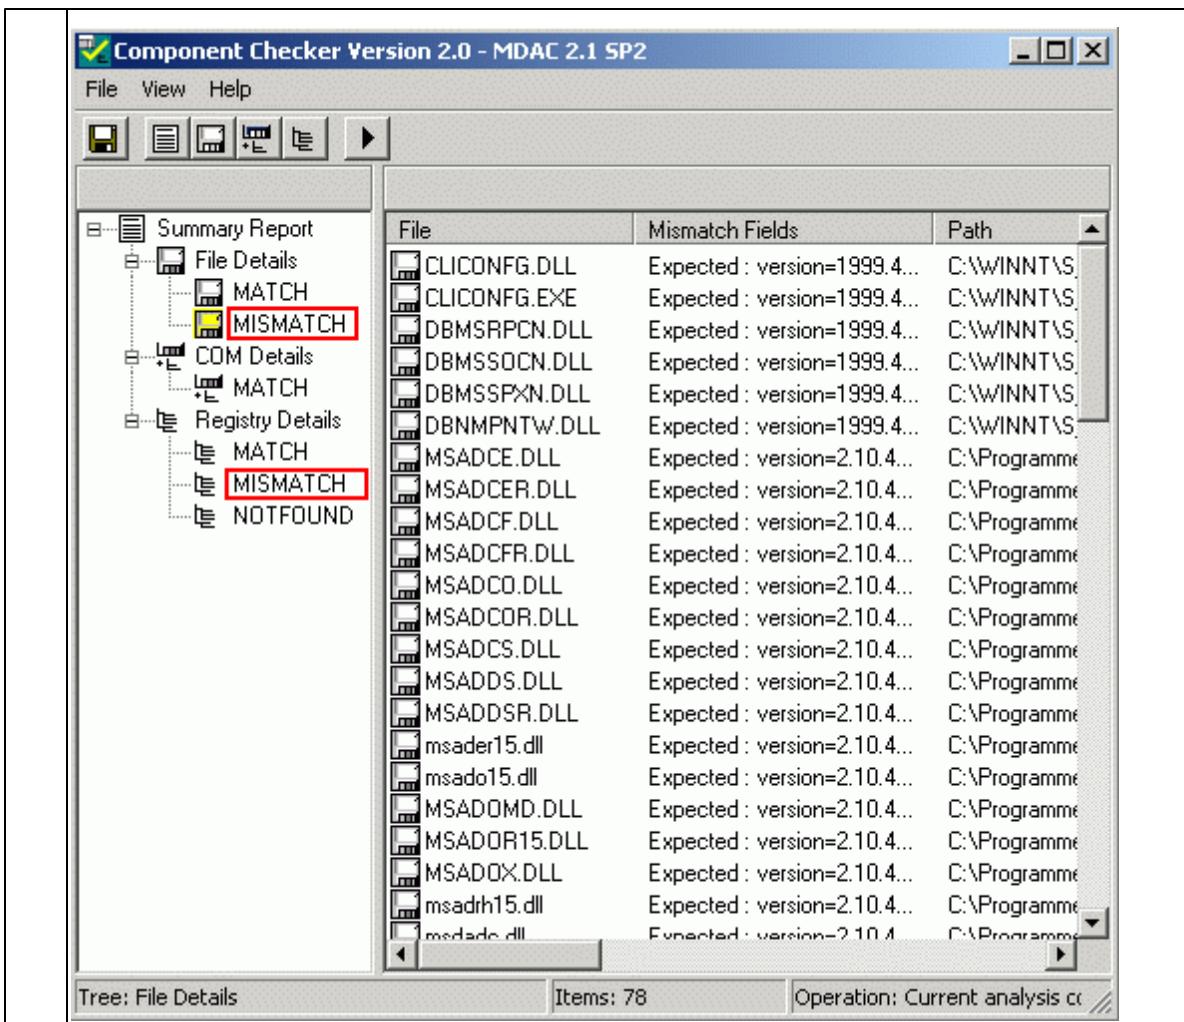

More information on the Microsoft Component Checker is available in the download above. After installing the Component Checker please proceed as follows.

- 4 Start the Component Checker with the application "cc.exe" and in the dialog that opens you select "Perform analysis of your machine and automatically determine the release version". Then acknowledge with "OK".

- 5 In the "Choose Analysis Type" you then select "Perform analysis against a selected version".

7

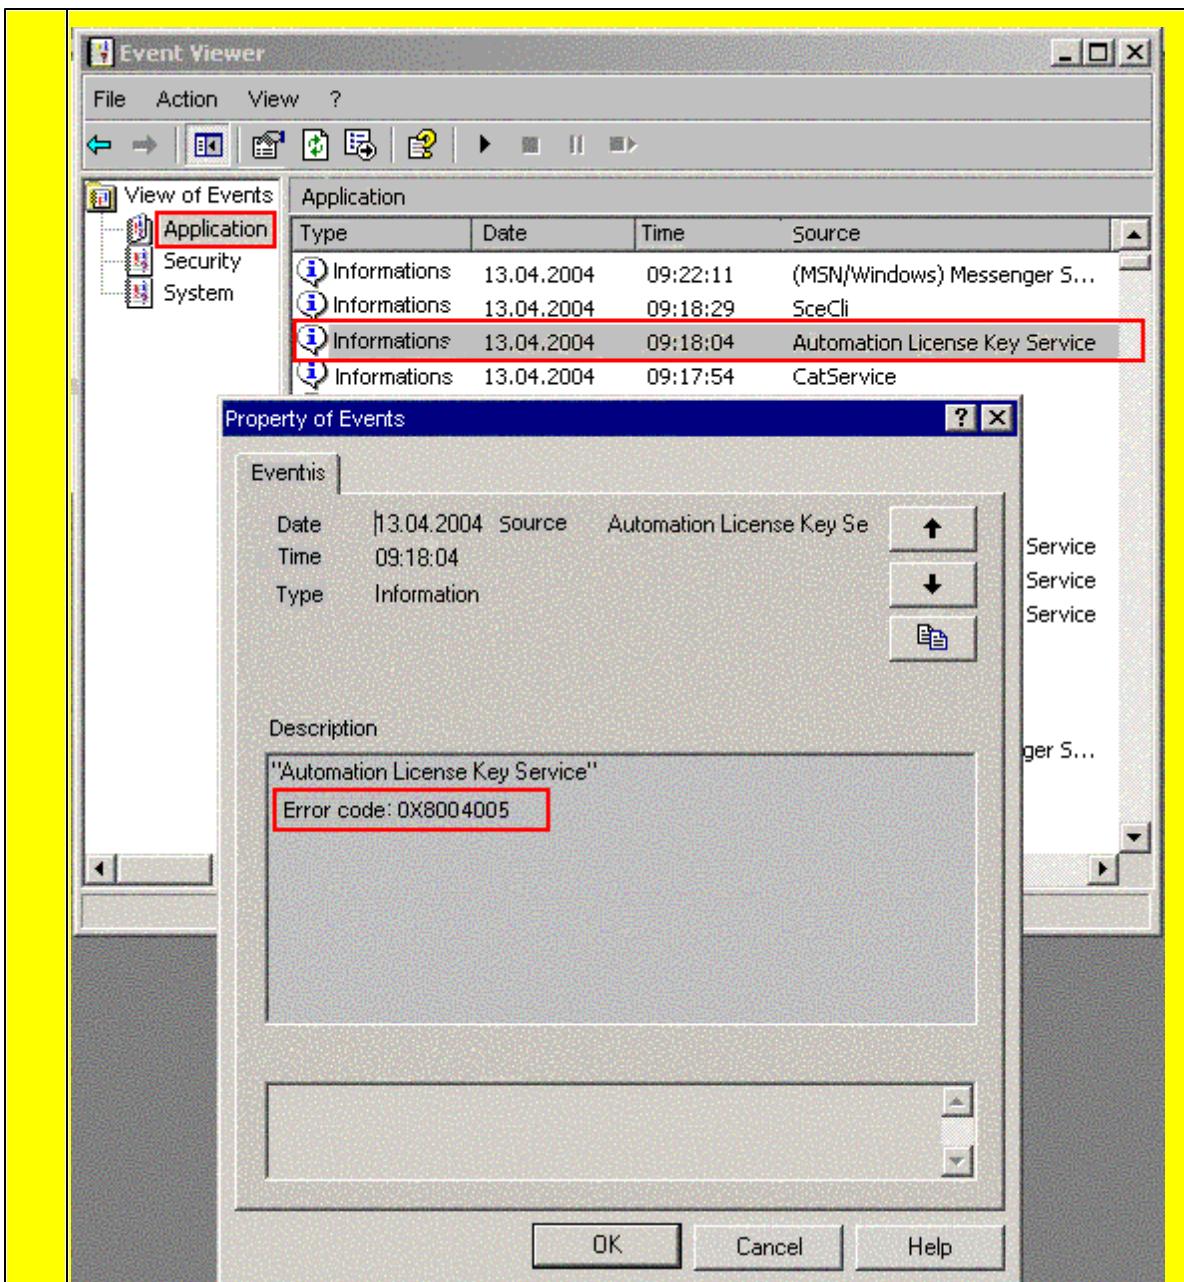

We recommend that you install the following Microsoft update on your PC/PG:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=6c050fe3-c795-4b7d-b037-185d0506396c&DisplayLang=de>

The behavior is cleared upon installation of MDAC Update RTM version V2.8. You can then start the Automation License Key Service.

Note:

If the message "No connection to the License Key Handler" appears and the Windows Event Viewer shows the error code "0X8004005", the database might be defective.

- 8 Please proceed as follows in the case of the error message shown in Fig. 06.
- Uninstall the ALM (Automation License Manager).
 - Delete the file "almdb.mdb".
 - Reinstall the ALM.

12.6 What options are there for transferring a license key to a PC without floppy disk drive?

Configuration Notes:

For some time now computers have been produced without a floppy disk drive. However, in order to install certain automation software products you need a floppy disk drive to install the license keys supplied on floppy disk.

Using the Automation License Manager you can install the licenses on a PC without floppy disk drive as follows.

| Transport Medium | License Key Type | |
|---|-------------------------------------|--|
| | Authorization (e.g. STEP 7 V5.2) | License Key (e.g. Floating License Key STEP 7 V5.3) |
| External floppy disk drive with USB interface | X | X |
| USB stick as transfer medium from one computer with floppy disk drive to a computer without floppy disk drive | -- | X |
| Second computer with floppy disk drive in the company network and transfer via the network | X ¹⁾ | X ¹⁾ |
| Second computer with floppy disk drive and offline transfer (see Help of the Automation License Manager) | X ¹⁾ | X ¹⁾ |

¹⁾ The Automation License Manager must also be installed on both computers.

Note:

You can recognize a License Key in the Automation License Manager by the twenty-digit license number.

An authorization has a ten-digit license number.

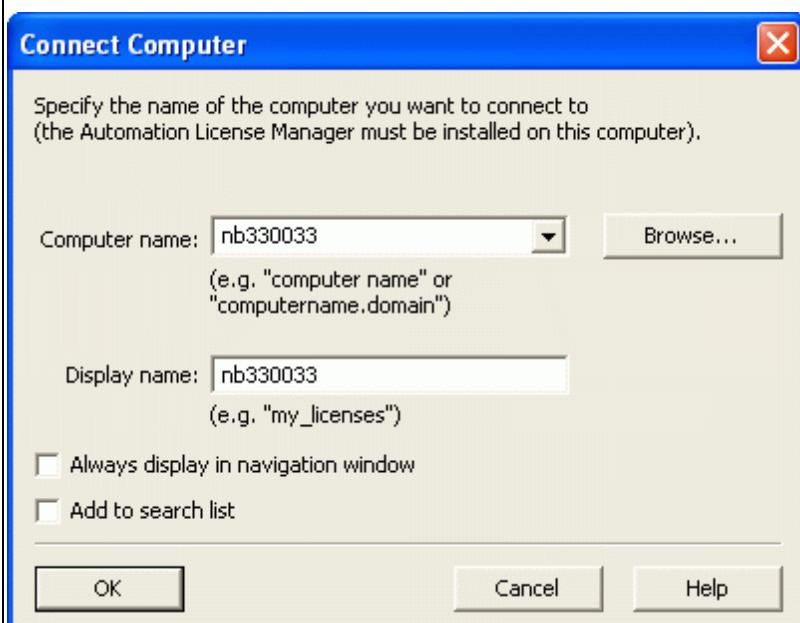

What is the difference between authorizations and license keys?

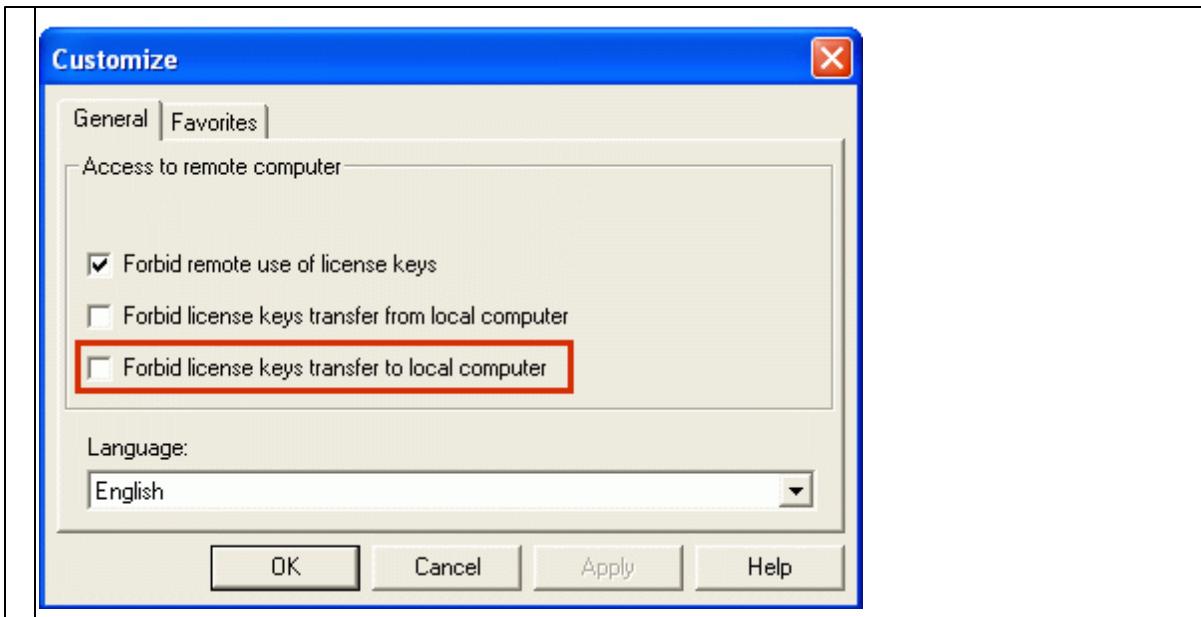

12.7 How can you use license keys that are located on a central computer (server) on a local computer?

<http://support.automation.siemens.com/WW/view/en/23175038>

Instructions:

The table below describes the procedure for using license keys that are located on a server on a local computer.

| N o. | Procedure |
|---------|--|
| 1 | The Automation License Manager must be installed on the local computer and on the server. |
| 2 | Then in the Automation License Manager on the local computer you must connect the server via the menu command Edit > Connect Computer . |
| |  |
| 3 | Now you can use the licenses located on the server. If the connection to the server is interrupted, you can continue to work for another 3 hours before the infobox comes about the missing license. The licenses remain on the server. |
| 4 | In order to be able to transfer the license keys from the server to the local PC you must clear the setting "Protect local license keys" on the server. You get to the settings via the menu command File > Customize... . Without the license you get the message "Zugriff verweigert / Access denied". |
| | WARNING: If this setting is disabled, anyone connected to the server can download the license keys from the server! |

**Notes:**

- The SIMATIC Logon tool, which is to be purchased separately, is available for managing the license keys (access rights etc.).
- In the "History" tab of the "Customize" dialog you have a display of the computers that are or were connected to the local Automation License Manager.

12.8 How can you install the Automation License Manager when the installation in Windows 2000 is aborted with the message "Server service not active"?

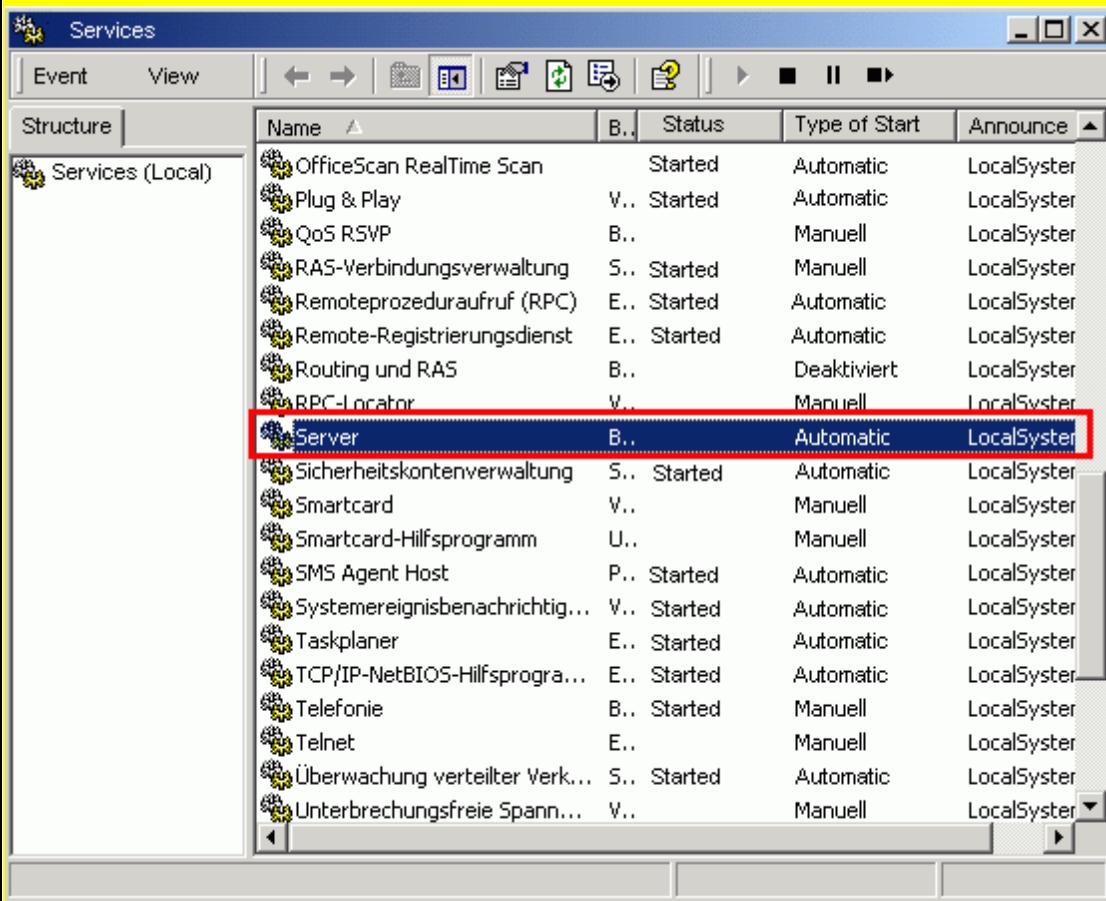

<http://support.automation.siemens.com/WW/view/en/23173182>

Instructions:

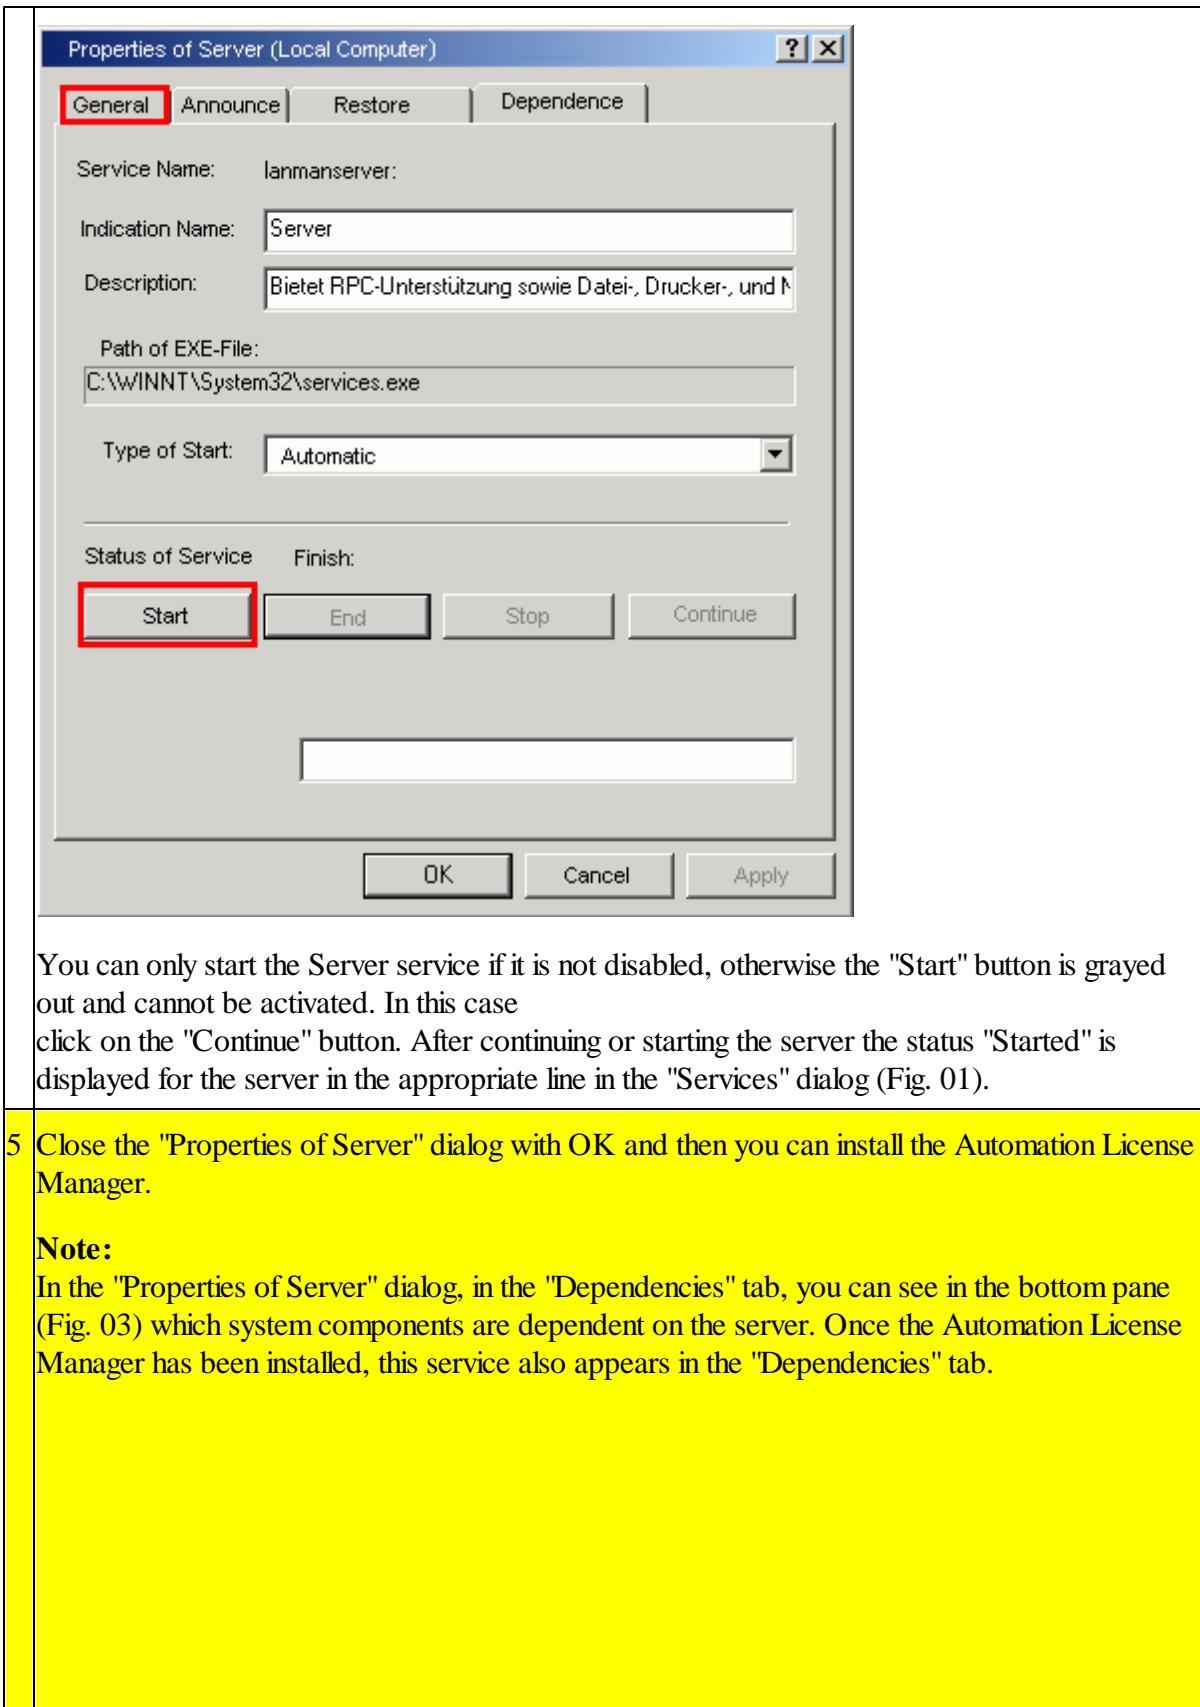

In Windows 2000 check whether the Server service is disabled in the Control Panel. The table below describes how to proceed to enable the Server service. If the Server is only stopped or terminated, then you can install Automation License Manager without any problem.

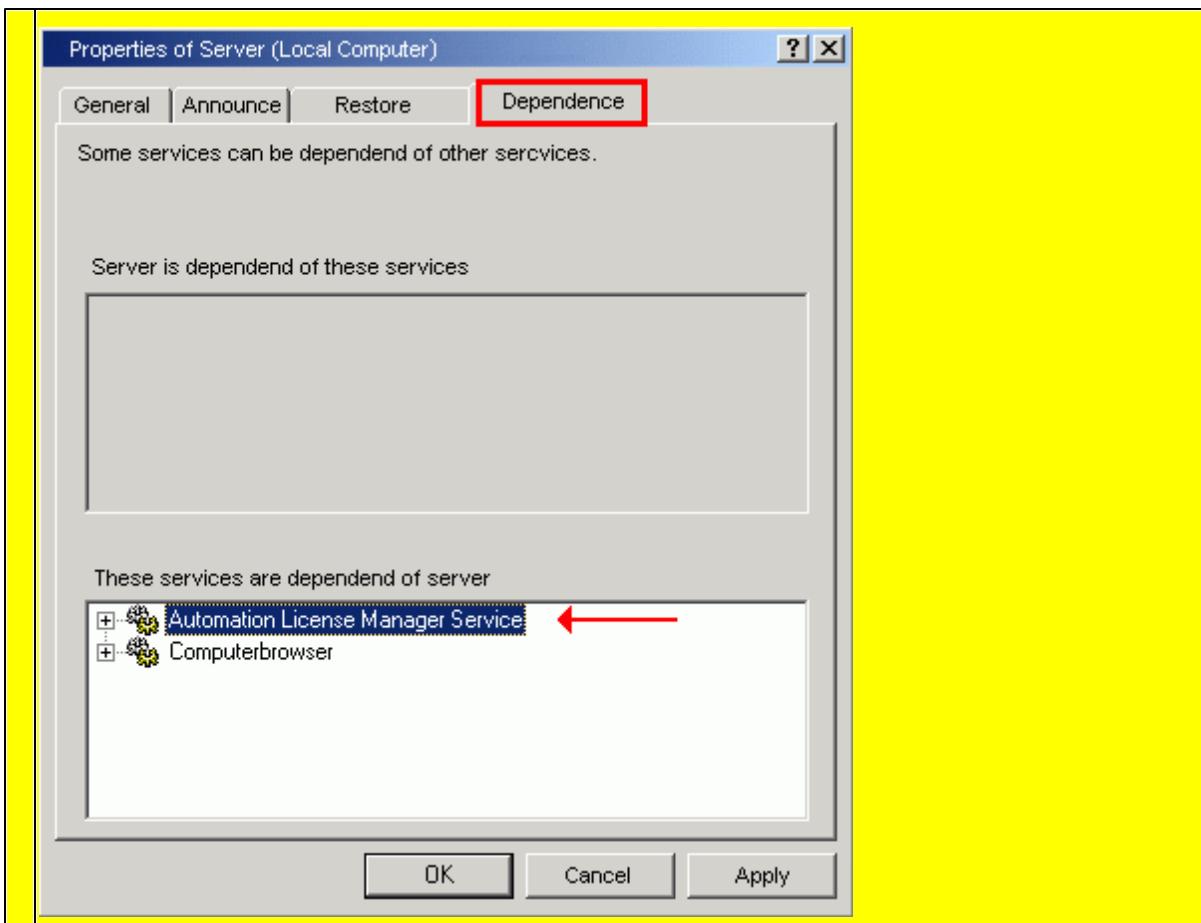

| N | Procedure |
|----|---|
| 0. | |
| 1 | In the Control Panel of Windows 2000 open the "Administration" dialog via <ul style="list-style-type: none"> • "Start > Settings > Control Panel > Administration". |
| 2 | In the "Administration" dialog you then open "Services". Here, in the "Status" column, you can see whether the Server service is enabled (Status: Started) or not. |

- 3 In the Services" dialog (Fig. 01) you right-click "Server" and in the pop-up menu that opens you select "Properties".

- 4 Go to the "General" tab in the "Properties of Server" dialog that opens and start the Server service. For this you click on the "Start" button.

These instructions have been created with STEP 7 V5.3.

12.9 Request for recovering authorizations of SIMATIC Industrial Software

<http://support.automation.siemens.com/WW/view/en/23322349>

QUESTION:

Where can I get support for the authorization of SIMATIC Industrial Software?

ANSWER:

Your contact for the Authorization Hotline in your region is:

| | Telefon | Fax | email |
|---------------|------------------|------------------|--|
| Europe/Africa | +49 180 5050 222 | +49 180 5050 223 | adautorisierung@siemens.com |
| America | Toll Free | +1 423-262-2200 | simatic.hotline@sea.sie |

| | | | |
|-----------------------|--|------------------|--|
| | + 1 800-333-7421 Outside USA +1 423-262-2522 | | mens.com |
| Asia/Australia | +86 10 64 757575 | +86 10 64 747474 | adsupport.asia@siemens.com |

In many cases, the authorization of SIMATIC Industrial Software requires a red or yellow authorization diskette. If there is a problem with the authorization, you can call the Authorization Hotline for your region via Technical Support. To avoid unnecessary waiting time for you and our hotline, you can download a **Request form for the restauration of an authorization** and send it to the hotline responsible for your area.

To download the latest version of the authorization software, you can find it under entry-ID: [114358](#).

Request form for recovering authorizations (selfextracting file)

[AuthSuppB_e.exe](#) (37 KB)

http://support.automation.siemens.com/WW/lisapi.dll/csfetch/772175/AuthSuppB_e.exe

12.10 What is the difference between authorizations and license keys?

What is the difference between authorizations (AuthorsW short keys) and license keys (ALM long keys) ?

<http://support.automation.siemens.com/WW/view/en/19020864>

Configuration Notes:

License keys are the new authorizations as from STEP 7 V5.3. With the new license keys we are implementing a new concept in the licensing of SIMATIC software.

Whereas the authorizations up to and including STEP 7 V5.2 were valid only for a specific version of the software, the license keys as from STEP 7 V5.3 are automatically also valid for the earlier versions of the same software.

This validity however is restricted only to the programs that are licensed with the license keys.

For programs licensed with an authorization only the authorization valid for the version continues to be valid.

Another new feature is that license keys can be stored on a network driver and can then be used by various computers (floating license).

The options that the SIMATIC world makes available to you with this type of licensing are described in Entry ID [19021092](#).

You can tell from the license number whether a program is protected by an authorization or by a license key. The license number is shown in the Automation License Manager (ALM).

An authorization license number has ten digits, a license key license number has twenty digits.

Whereas there were earlier only authorizations and emergency authorizations, there are now the following different types of license keys.

Notes on authorizations (AuthorsW short keys):

Authorizations can only be saved and repaired on the original yellow or red floppy disks and installation is only possible on internal hard disk drives and partitions or network drives, but not on USB sticks. To ensure working with the associated software the authorization must be available locally on the hard disk on which the software is installed. Authorizations cannot be transferred via the Internet nor installed on USB hard disks.

Notes on license keys (ALM long keys):

License keys cannot be restored on the floppy disks on which they were supplied, but can only be repaired on the PC/PG on which they are actually located. There is no longer an emergency authorization on floppy disk for license keys, because the software is always runnable if a valid license key has already been installed. So if there is a defective license key on the hard disk, working with the software is only interrupted at regular intervals with a message informing you that there is no valid license key available. As from ALM V1.1 SP1 you can also store license keys on USB sticks. A Trial License Key is installed from the CD. It can be activated via the actual SIMATIC application once for 14 days and is for evaluation purposes. You cannot restore or move the Trial License Key.

Software products that are released for utilization with license keys can also use newer license keys. More information on this is also available in the Online Help of the Automation License Manager under

- Notes on utilizing "older" software versions.

12.11 STEP 7 V5.3 - User authorization by the Automation License Manager

<http://support.automation.siemens.com/WW/view/en/23174056>

QUESTION:

What do I have to take into consideration when using the STEP 7-Programming software in connection with the new Automation License Manager?

ANSWER:

To use the STEP 7-Programming software, a product-specific License Key (User authorization) is required whose installation is executed as per STEP 7 V5.3 by means of the Automation License Manager. The Automation License Manager is a Software-Product of the SIEMENS AG. It is used between various systems to handle the License Keys (technical representatives of Licenses). The Automation License Manager can be found:

- on the installation medium of the corresponding Software Product, for which a License Key is required
 - or
- on a separate installation medium.

The Automation License Manager includes an Online-Help allowing you to call it context-related via the F1-key or via the menu task **Help > Help on License Manager** after its installation. By means of that help you obtain detailed information regarding functionality and handling of the Automation License Manager.

Licenses

To use license-protected program packages of STEP 7, licenses are required. A license serves as legal title to use products. The representatives of this title are as follows:

- the CoL (Certificate of License) and
- the License Key.

Certificate of License (CoL)

The "Certificate of License" that is co-supplied along with the product itself, is the legal evidence of the title of use. The according product may only be used by the owner of CoL or authorized persons.

License Keys

The License Key is the technical representative of a license (electronic License stamp). For every type of Software that is subject to a protected license, a license key is assigned by the SIEMENS AG . Only if the existence of a valid license has been located on the PC after the startup of the Software, the corresponding Software can be used according to the interrelated terms of licenses and use.

Notes:

To get a brief overview about its user surface and function range of the STEP 7 Basis Software, you can work without License Key. However, the unlimited use in terms of the legal situation of licenses (agreements) is only permitted and possible with an installed License Key. If no valid License key is

installed for STEP 7 V5.3, a Trial License Key is used that is supplied by default and installed with STEP 7. However, STEP 7 can only be used for 14 days with this License Key. During the first startup of STEP 7, the Trial License is activated without a valid License key. The system regularly asks you to do the installation.

License Keys can be saved and transferred between the single storage media:

- on License Key-floppies,
- on local Harddrive memory
- and on harddrive memories of PCs located in the Network.

If Software-Products are installed for which no license key is available you can assess the license key requirement und order the necessary licenses.

More information about the handling of License Keys can be obtained in the Online-Help for the Automation License Manager.

License-Types

For Software-Products of the SIEMENS AG, it is differentiated between the following user-oriented License-types. The behaviour of the Software is controlled by the different license keys for all license types. The mode of use results from the corresponding Certificate of License.

| License-Type | Description |
|---------------------|---|
| Single License | The use of the Software is unlimited in terms of time on an arbitrary PC. |
| Floating License | Unlimited in terms of time, refers to the use of a related user right ("remote" use) of a Software. |
| Trial License | The use of Software is limited: Refers to a validity of maximal 14 days from the moment of the first start, the use for test and validation purposes (exclusion of liability). |
| Upgrade License | For an Upgrade, specific requirements of the system status may be necessary: By means of an Upgrade license, a license of an "Old-"Version x can be converted into a Version >x+... . An Upgrade may be required by e.g. an extension of the quantity structure. |

12.12 Difference between ALM and SIMATIC Logon

<http://support.automation.siemens.com/WW/view/en/22814523>

QUESTION:

What are the differences between the Automation License Manager (ALM) and SIMATIC Logon?

ANSWER:

The Automation License Manager is the tool supplied for STEP 7 V5.3 for managing the License Keys in STEP 7. The use of SIMATIC Logon requires a fee. It provides user administration for both the SIMATIC Software and the License Keys. The following brief description of the functions shows the differences between both programs.

Automation License Manager V1.0

- Transfer of License Keys to the local hard disc.
- Transfer of License Keys via network PC (ALM must be installed on the server).

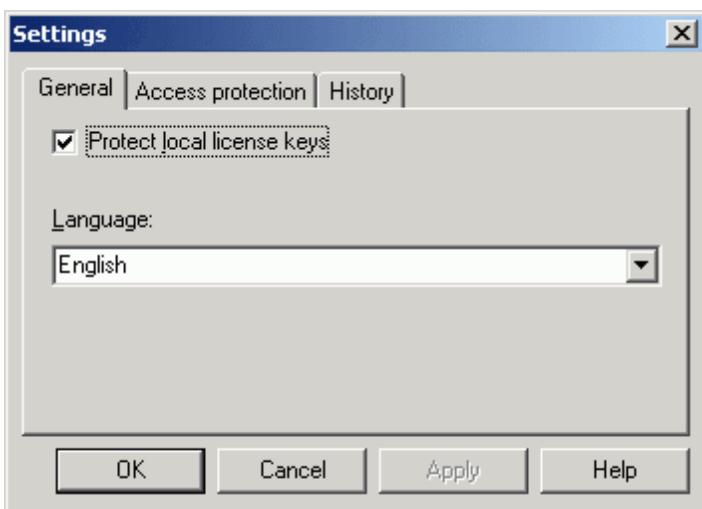

Fig. 1: Settings of ALM V1.0

Automation License Manager V1.1

- Transfer of License Keys to the local hard disc.
- Transfer of License Keys to a network PC (ALM must be installed on the server).
- Use of License Keys on a network PC (ALM must be installed on the server).

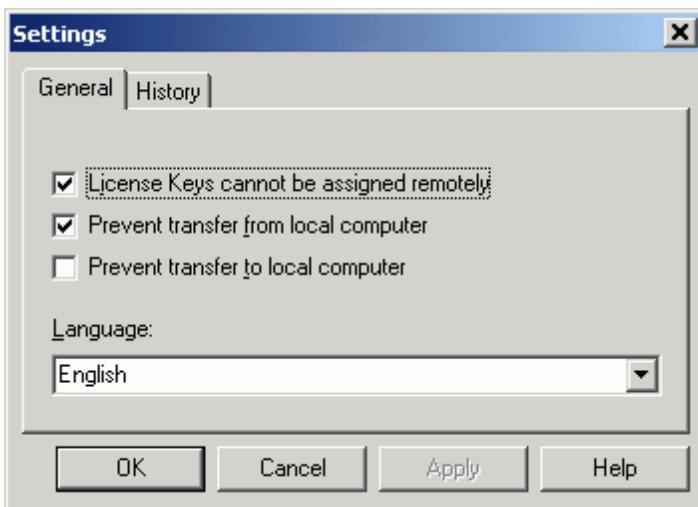

Fig. 2: Settings of ALM V1.1

SIMATIC Logon

SIMATIC Logon is a software-package that assigns authorizations for SIMATIC applications and facility areas. It includes following components:

- SIMATIC Logon Service
The basis package with central access protection for SIMATIC applications and plant areas.
- SIMATIC Logon Service STEP 7.
An option package for embedding SIMATIC Logon Service into the SIMATIC Manager.
- SIMATIC Logon Admin Tool - permits tasks administration.
An option package that facilitates the assignment of authorizations (Windows-Groups, function-related rights , ...) for the tasks of an application (SIMATIC BATCH, WinCC, ...)

The access protection can be started by logging into the Logon-feature (keyboard), via a chip card-reader or via other devices.

Note:

Using the option packages requires the installation of the basic package.

12.13 STEP 7 V5.3 - notes on using STEP 7 License Keys

QUESTION:

What should you watch out for when installing, deinstalling, restoring and upgrading License Keys?

ANSWER:

Rules:

- **Before** formatting, compressing or restoring the drive or **before** installing a new operating system, you must transfer the License Keys from the hard disk back onto the License Key floppy disk.
- If a backup of the hard disk includes a copy of a License Key, there is a risk of overwriting and thus destroying the still valid License Keys when you reload the backup data. To avoid this either you have to remove the License Keys before making the backup copy or exclude them from the backup.
- If you are using a hard disk optimizing program that can move fixed blocks, then you must save any License Keys **beforehand** on the License Key floppy disk.
- Due to the License Keys a cluster is created on the target drive, which might be marked as "defective". You must not "repair" this cluster.
- You can copy files on the License Key floppy disk. However, you cannot use these copies to transfer License Keys. You need the original License Key floppy disk for that.
- When you install the License Keys, the data is stored in the "AX NF ZZ" directory on your hard disk. You must not change the attributes, move the folder nor delete the files.
- You can no longer deinstall defective License Keys using the Automation License Manager. This might block the installation of new License Keys.

How do you transfer License Keys?

When installing STEP 7, the License Key required is transferred automatically to the hard disk if the correct License Key floppy disk has been inserted. If you do not insert any or the incorrect License Key floppy disk, you are prompted accordingly to insert the correct License Key floppy disk.

Procedure:

- Insert the appropriate License Key floppy disk when requested to do so.
- Acknowledge the request.
- The License Key is transferred to a physical drive.

If the transfer of the License Key is to be made later, then proceed as follows:

- Insert the License Key floppy disk in the appropriate floppy disk drive.
- Open the "Automation License Manager" program via the Windows Start menu **Start > Simatic > License Management > Automation License Manager**.
- Select the floppy disk drive on which your License Keys are located.

- Select the License Keys you want to transfer and drag-and-drop them onto the target drive.
- The License Keys have now been transferred.

Note:

To transfer License Keys you need all access rights to the source drive and the target drive.

Upgrading a License Key or an "old authorization":**Requirement:**

- The Automation License Manager must be installed.
- Old License Key -> New License Key
You require
 - the CoL (Certificate of License) and the License Key of the older version and
 - the CoL (Certificate of License) and the Upgrade License Key of the target version
- Old authorization -> New License Key
You require
 - the old authorization and
 - the CoL (Certificate of License) and the Upgrade License Key of the target version
- Old authorization -> New authorization
You require
 - the old authorization and
 - the CoL (Certificate of License) and the Upgrade Authorization of the target version

Procedure:

The following steps show how to upgrade a License Key and an authorization. The steps are the same for a License Key and an authorization. The example is the text for a License Key.

1. Select the view via **View > Administration**.
2. Transfer the License Keys of the previous version and the Upgrade License Keys to the hard disk on which you wish to do the upgrade.

3. In the navigation area in which the License Key is located select the storage location for which the upgrade is to be made (previous version).
4. In the object area select the License Key for which the upgrade is to be made.
5. Execute the following menu command: **License Key > Upgrade**.

Result:

Upgrade is made.

Notes:

- If there is only one option for upgrading, the upgrade is made without any more displays or requests.
- If there are multiple options for upgrading, the "License Key Upgrade" dialog opens. In this you select the upgrade to be made and then click on the "Upgrade" button.

Restoring License Keys

If a License Key is defective, please contact our licensing hotline:

| | Telephone | Fax | E-mail |
|-----------------------|------------------|------------------|--|
| Europe/Africa | +49 180 5050 222 | +49 180 5050 223 | adautorisierung@siemens.com |
| America | +1 423 262-2522 | +1 423 262-2289 | simatic.hotline@sea.siemens.com |
| Asia/Australia | +86 1064 757 575 | +86 1064 747 474 | adsupport.asia@siemens.com |

You might possibly be able to "repair" a defective License Key with the menu command **License Key > Restore**. Use this menu item to restore defective License Keys. You may only use this function in agreement with the licensing hotline. Generally you do not need this function.

You are in permanent telephone contact with the hotline during the whole restore procedure.

When you call the hotline, please make sure that you have the following information at hand:

Licensing: name of the License Key

Query code: the code that you have to give to the licensing hotline

You then receive an enabling code from the licensing hotline:

- Enter this enabling code and then press **OK** to run the "Restore" function or
- Click on **Cancel** if the License Key is not to be restored.

Deinstalling License Keys

If you want to format a hard disk on which there are the License Keys, then deinstall the License Keys **beforehand**. To do this you transfer the License Keys from the hard disk back onto the

floppy disk. You can also transfer all the License Keys of the options packages onto this floppy disk.

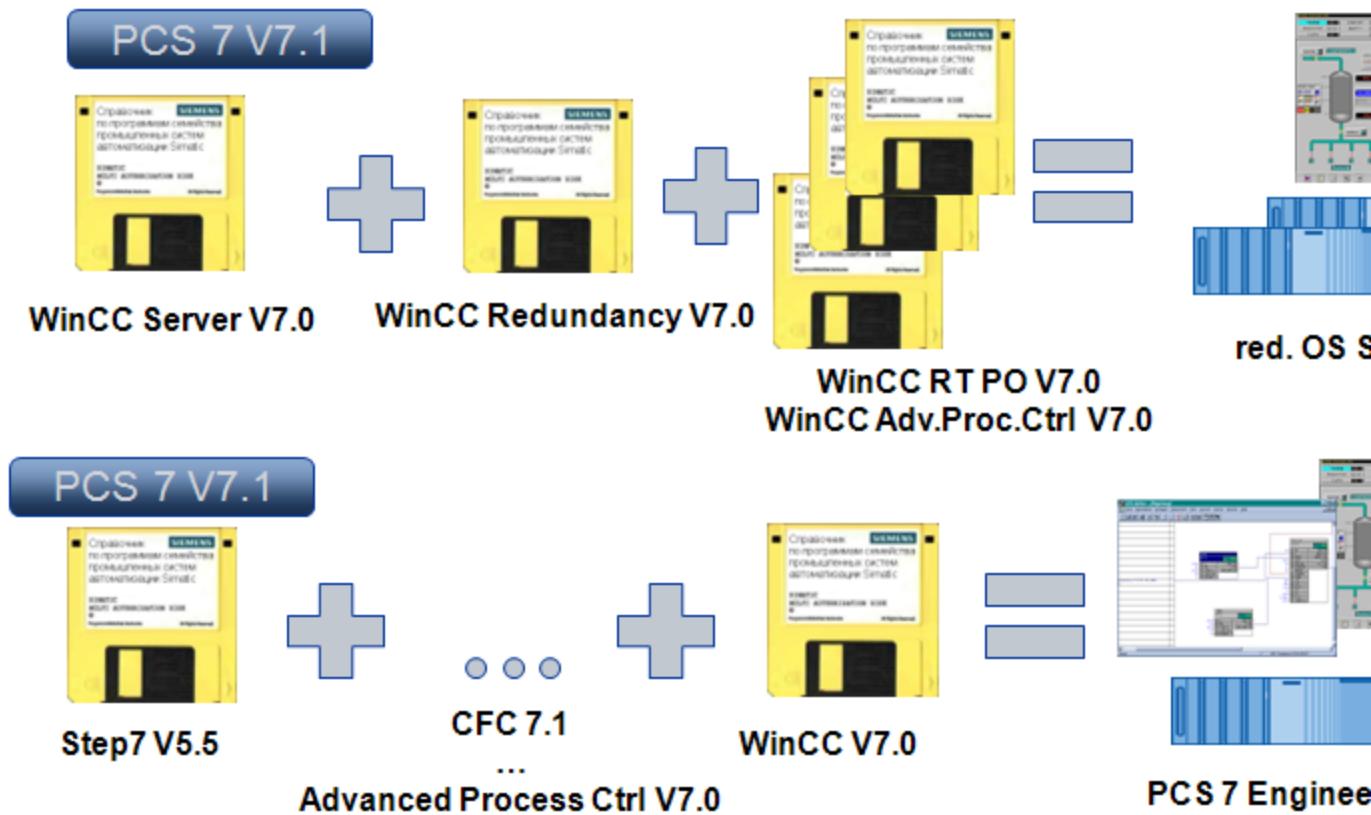

Procedure:

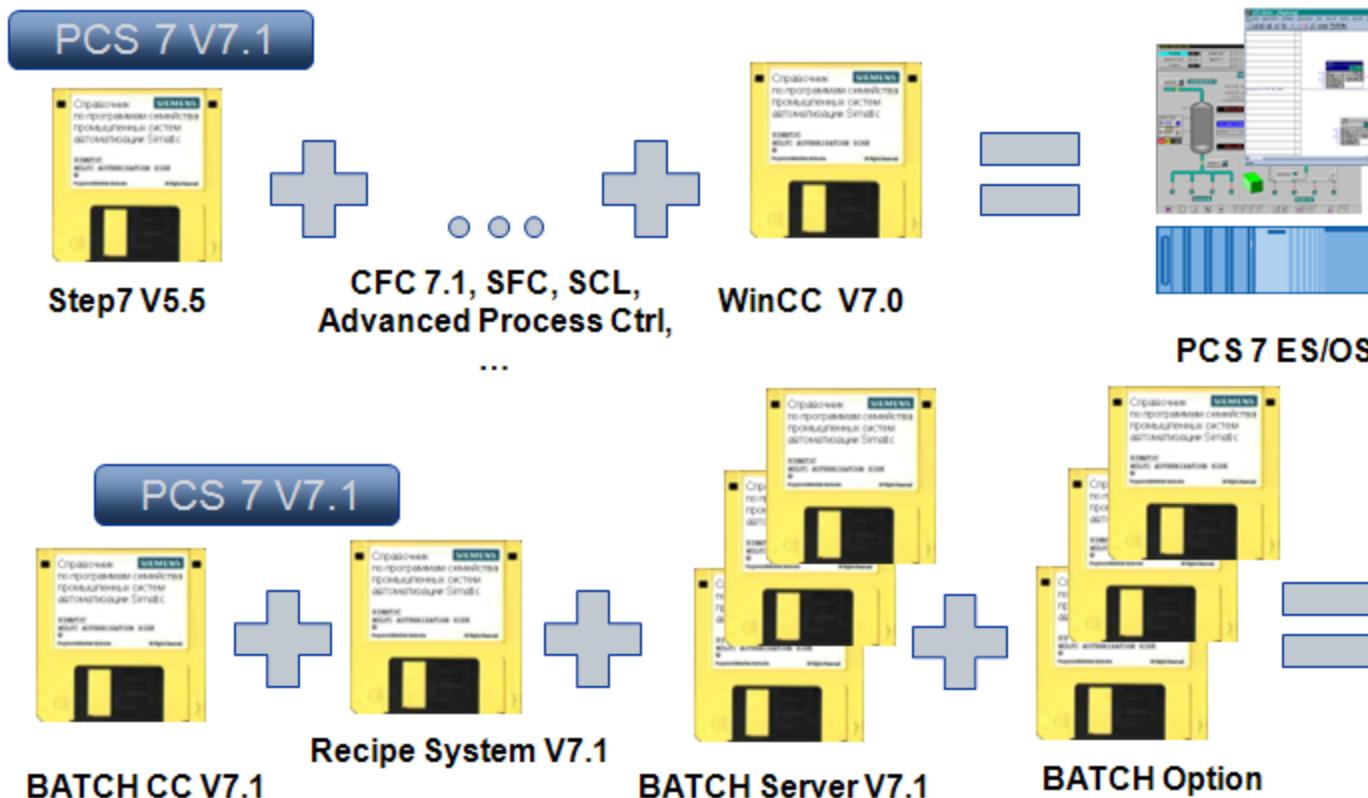

- Insert the License Key floppy disk into the appropriate floppy disk drive.
- Open the "Automation License Manager" program via the Windows Start menu **Start > Simatic > License Management > Automation License Manager**.
- Select the drive on which your License Keys are located.
- Select all the License Keys and drag-and-drop them onto the target drive.
- The License Keys are then transferred.

Note:

The License Keys can also be transferred to other hard disks or network drives.

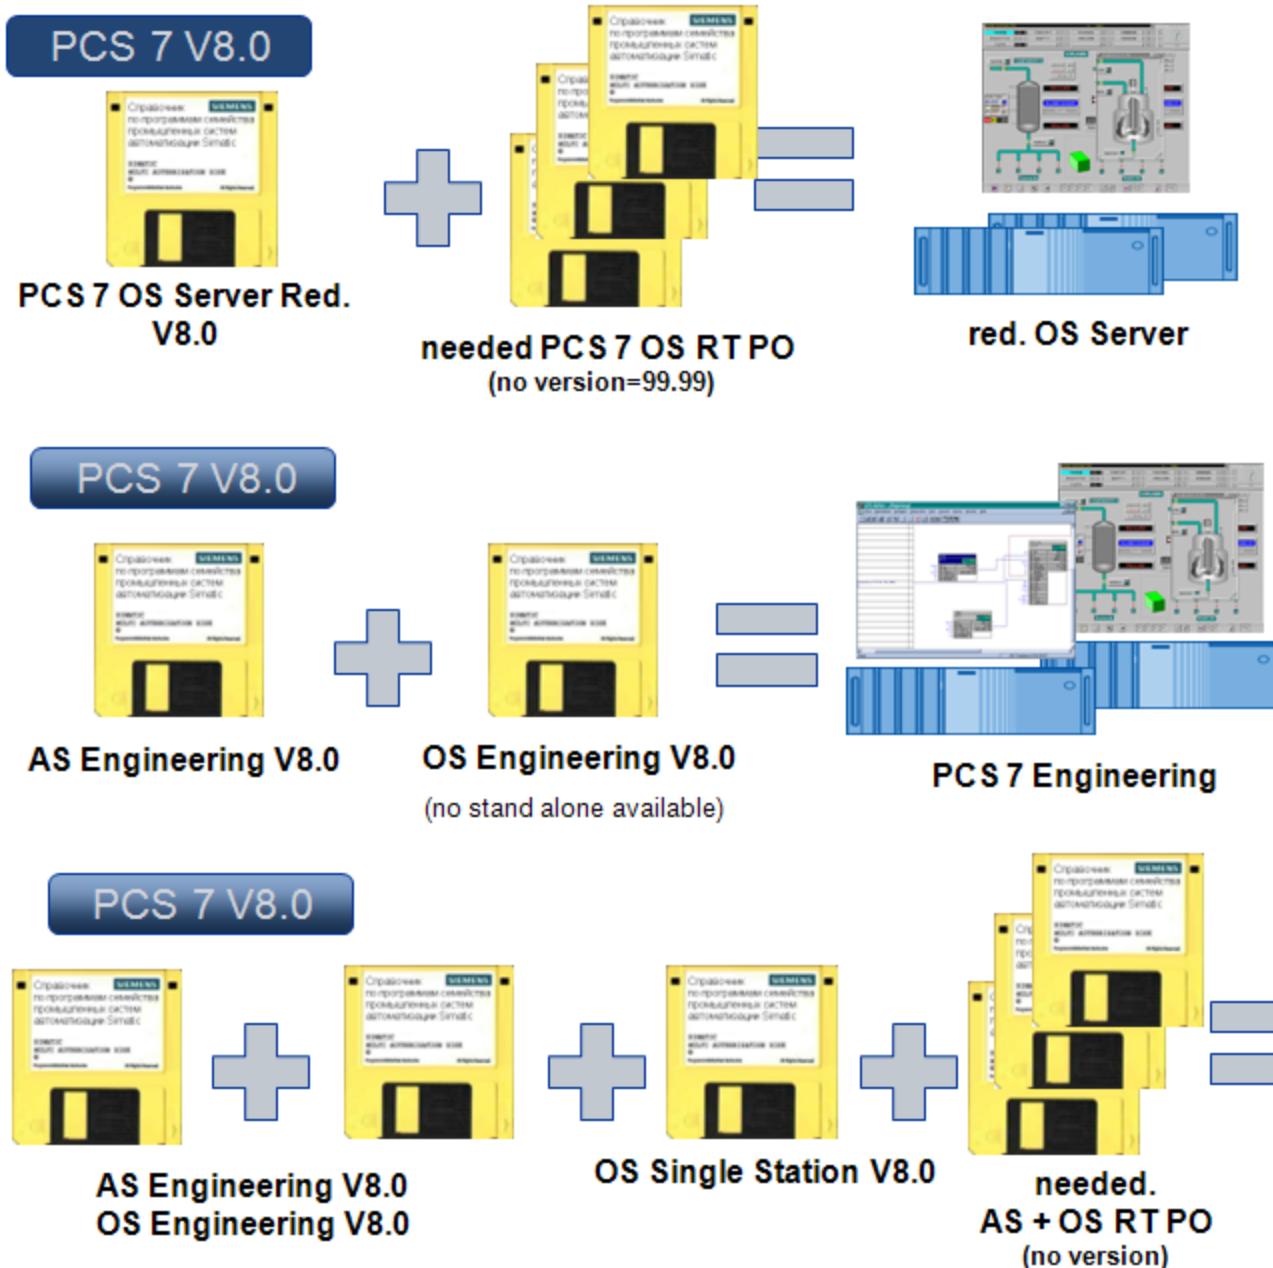

12.14 License concept PCS 7 V7

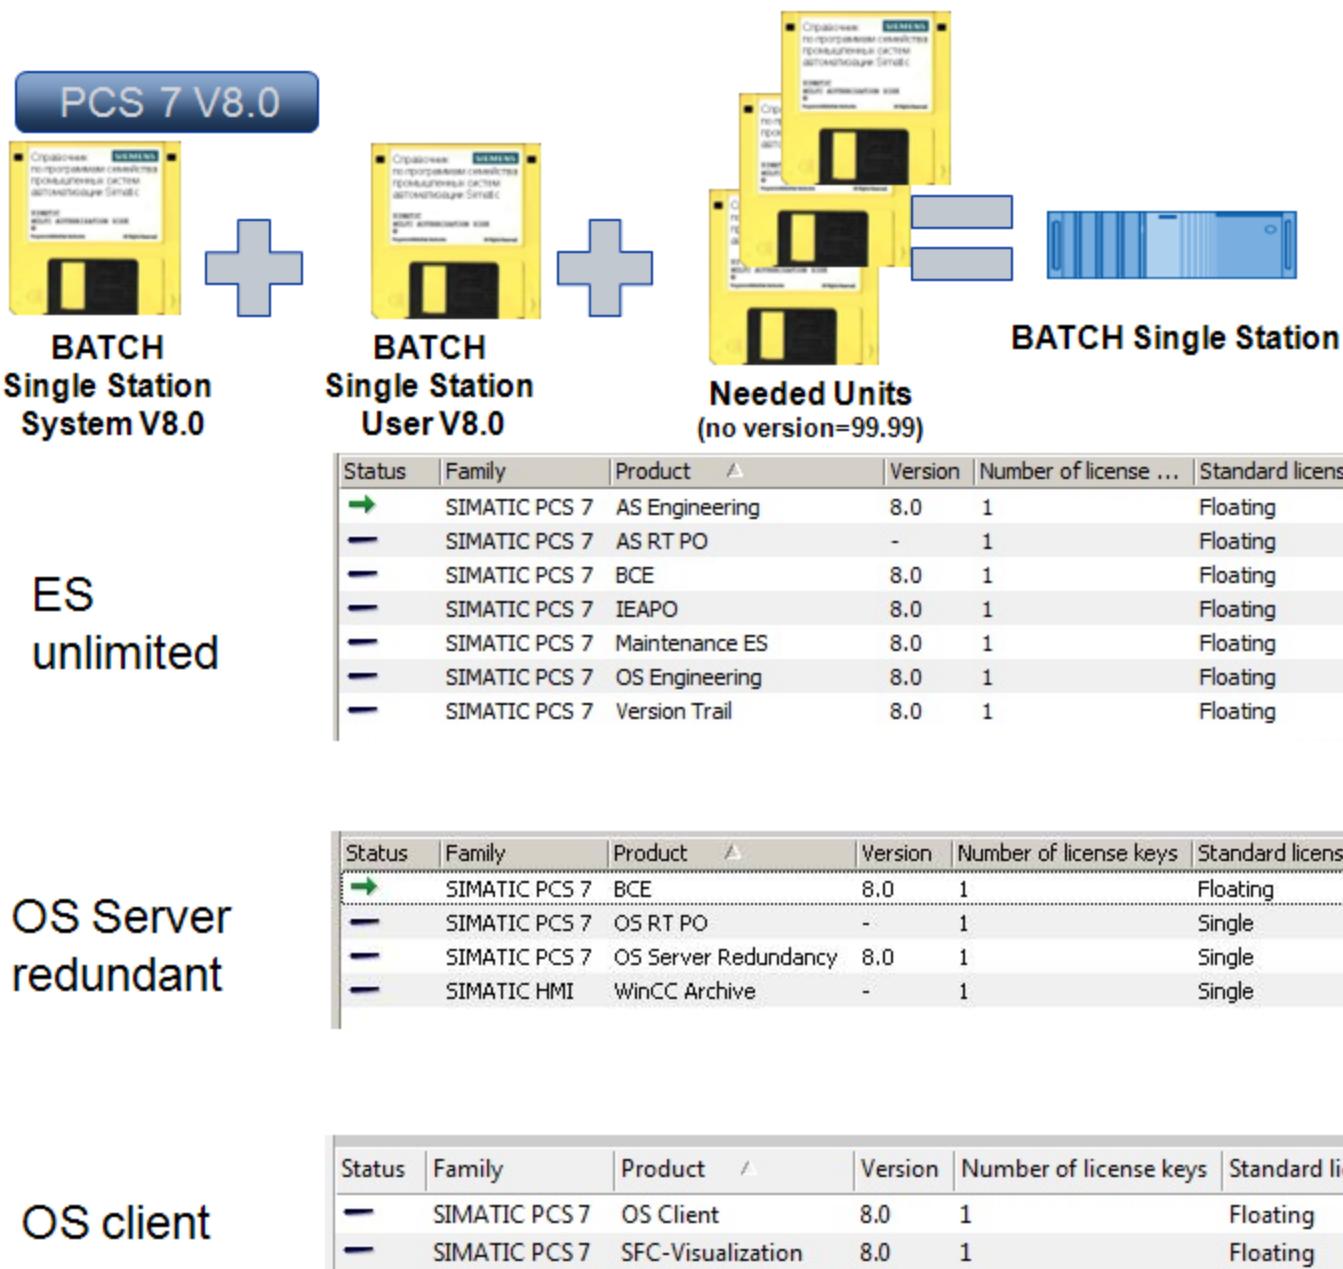

12.15 License concept PCS 7 V8.0

- All volume licenses are count relevant licenses
- All count relevant license keys are without version label (SIFCY****9999*.EKB)
- Number of license keys has been reduced significantly (licenses with the name „Upgrade Dump“)
- Assignment of license key to product considerably improved
- Simplification/cleaning up of the license packages (AS = Step7/CFC/WinCC in licence package)
- No more power packs in PCS 7 V8.0
- Reduction of the number of licenses for future updates : to >> V8.0

16 Premium Studio DVD

Premium Studio DVD English

Russian Description -

Premium Studio DVD Deutsch

Premium Studio DVD Francais

I recommend to buy from Siemens **Premium Studio 2009** for 90 euros for acquaintance with Simatic programs:

<http://support.automation.siemens.com/WW/view/de/31498142>

Premium Studio 2009 provides you with the most important software packages for engineering and runtime for SIMATIC S7/C7, SIMATIC HMI, SIMATIC NET, SINUMERIK and SIMOTION on three data carriers (DVDs). The user can select general settings (e.g. languages for installation, installation path, etc.) and the required software packages via a specially developed SETUP.

The installation is then performed automatically (silent), i.e. no further user activities are required.

The use of Premium Studio for installation and maintenance of the software packages will provide a significant saving of time and money.

No licenses are included with Premium Studio.

For productive operation of the installed software products the user can either use existing licenses of the version in question or he must purchase new licenses. Premium Studio 2008 SE is now available for delivery.

The scope of delivery of Premium Studio 2008 SE includes 3 single-sided dual layer DVD-R discs with large storage capacity (8.5GB) DVDs.

**Premium Studio
TIA Portal Professional.**

16.3 Deutsch

<http://support.automation.siemens.com/WW/view/de/31498142>

Premium Studio 2009 bietet die wichtigsten Software-Pakete für Engineering und Runtime zu den Systemen SIMATIC S7/C7, SIMATIC HMI, SIMATIC NET, SINUMERIK und SIMOTION auf 3 Datenträgern (3 * 8Gb DVD) an. Dabei kann der Anwender allgemeine Einstellungen für die

Installation (z.B. zu installierende Sprachen, Installationspfad usw.) und die benötigten Software-Pakete über ein speziell für das Premium Studio entwickeltes SETUP auswählen.

Die Installation erfolgt danach automatisch ("silent"), d.h. es sind keine weiteren Aktivitäten des Anwenders notwendig.

Der Aufwand für die Installation und Pflege der Software-Pakete reduziert sich mit dem Einsatz des Premium Studios deutlich.

Mit dem Premium Studio werden **keine Lizenzen** mitgeliefert.

Für die produktive Nutzung der installierten Software-Produkte muss der Anwender auf vorhandene Lizenzen der entsprechenden Version zurückgreifen oder neue Lizenzen bestellen.

Die Version des Satzes wird 2 Male in das Jahr erneuert.

<http://rutracker.org/forum/viewtopic.php?t=2060069>

16.4 Francais

<http://support.automation.siemens.com/WW/view/de/31498142>

Premium Studio 2009 est le plus important package de logiciels d'ingénierie et d'exécution pour SIMATIC S7/C7, SIMATIC HMI, SIMATIC NET, SINUMERIK et SIMOTION, sur 3 supports de données (3 * 8Gb DVD).

Des configurations générales, telles que : les packages de logiciels requis, les langues qui doivent être installées, le chemin d'installation, etc., peuvent être sélectionnées par l'intermédiaire d'un SETUP spécifique.

L'installation se déroule alors de façon automatique (transparente), l'utilisateur n'a pas à faire de manipulations supplémentaires. L'utilisation de Premium Studio entraîne des gains de temps et de coût considérables pour l'installation et la maintenance du package de logiciels.

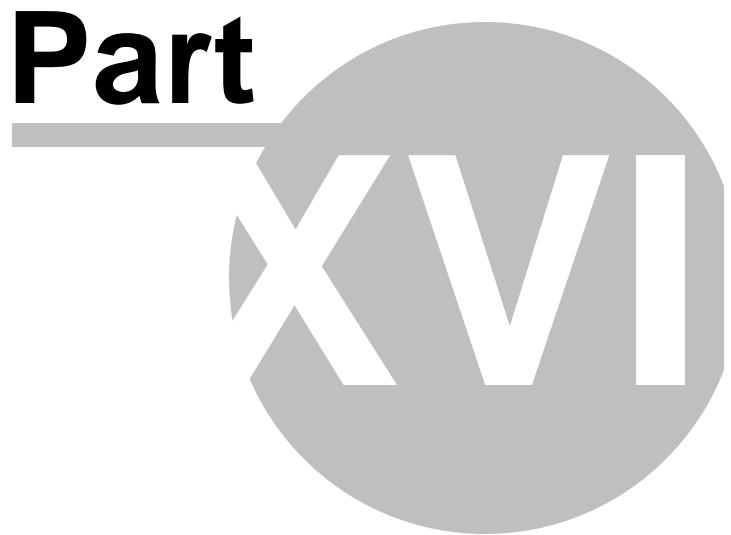

Aucune licence n'est inclue dans Premium Studio. Les licences doivent être obtenues séparément, soit en utilisant des licences déjà existantes de la version en question, soit en achetant de nouvelles licences.

La version de l'assortiment se renouvelle 2 fois par année.
